1	Thin-Walled Circular Cylinders Under Internal and/or External Pressure and Stressed in the Linear Elastic Range	1
1.1	Foreword	1
1.2	Stress State in Thin-Walled Circular Cylinders Under Internal and External Pressure	3
1.2.1	Hoop Stress	4
1.2.2	Axial Stress	6
1.2.3	Radial Stress	7
1.3	Design of Thin-Walled Circular Cylinders Under Internal and External Pressure	8
1.3.1	Thin-Walled Circular Cylinders Under Internal Pressure	11
1.3.2	Thin-Walled Circular Cylinders Under External Pressure	13
1.4	Strain State in Thin-Walled Circular Cylinders	14
1.5	Effective Hoop Stress Distribution Through the Wall Thickness	16
1.6	Thin-Walled Circular Cylinders and Membrane Theory of Shells	19
2	Instability of Thin-Walled Circular Cylinders Under External Pressure	23
2.1	General	23
2.2	Instability of a Thin-Walled Ring	24
2.3	Instability of a Thin-Walled Cylinder of Annular Cross-Section	32
2.4	Effect of Geometrical Imperfections	35
2.5	Instability of a Thin-Walled Cylinder of Annular Cross-Section with Circumferential Stiffening Rings	38

3	Other Types of Instability of Thin-Walled Circular Cylinders . . .	41
3.1	Foreword.	41
3.2	Instability of Thin-Walled Circular Cylinders Subjected to Axial Load.	42
3.2.1	Compendia on Elementary Column Theory (Overall Instability or Euler Buckling)	42
3.2.2	Overview of Local Instability: Linear Buckling of Circular Cylinders	51
3.3	Overview of Torsional Buckling of Circular Cylinders	56
3.4	Overview of Flexural Ovalization Buckling of Circular Cylinders	58
3.5	Thin-Walled Circular Cylinders Under Internal Pressure, Loaded Beyond the Elastic Range	60
3.6	Thin-Walled Circular Cylinders Under Internal Pressure and Axial Tension, and Stressed Beyond Yielding	63
3.6.1	Hoop Stress Greater than Axial Stress.	63
3.6.2	Axial Stress Greater than Hoop Stress.	68
4	Thick-Walled Circular Cylinders Under Internal and/or External Pressure Stressed in the Linear Elastic Range	73
4.1	General	73
4.2	Radial Stress and Hoop Stress	74
4.3	Axial Stress	80
4.4	Radial and Hoop Stress Distributions Through the Wall Thickness	81
4.4.1	Stress Distributions in Circular Cylinders Under Internal Pressure	82
4.4.2	Stress Distributions in Circular Cylinders Under External Pressure	85
4.4.3	Remarks on Maximum Hoop Stress	87
4.5	Analysis of Strain State and Displacements	89
4.5.1	Circular Cylinders with Closed Ends	89
4.5.2	Circular Cylinders with Open Ends.	91
4.6	Design Considerations for Circular Cylinders under Internal Pressure	94
4.7	Design of Thick-Walled Circular Cylinders	95
4.7.1	Thick-Walled Circular Cylinders Under Internal Pressure.	98
4.7.2	Thick-Walled Circular Cylinders Under External Pressure	105
4.7.3	Asymmetric Behavior of Circular Cylinders Under Internal Pressure or External Pressure	108

5	Concentric Circular Cylinders with Radial Interference Fit and Multilayer Circular Cylindrical Structures	109
5.1	Introduction	109
5.2	Two Concentric Circular Cylinders Assembled with an Interference Fit	110
5.3	Optimizing Two Circular Cylinders Assembled with an Interference Fit	116
5.4	Optimizing Two Circular Cylinders Assembled with an Interference Fit and Subjected to Internal Pressure	119
5.4.1	Case 1 (Same Material and Same Yield Strength)	120
5.4.2	Case 2 (Same Material and Different Yield Strength).	123
5.4.3	Case 3 (Different Material and Same Yield Strength).	124
5.4.4	Case 4 (Different Material and Different Yield Strength).	124
5.4.5	Concluding Remarks.	124
5.5	Effects of Centrifugal Force.	126
5.6	Shrink-Fit Shaft/Hub Assemblies	129
5.7	Multilayer Circular Cylindrical Structures	130
6	Circular Cylinders Subjected to a Radial Temperature Gradient and Stressed in the Elastic Range	141
6.1	General Considerations	141
6.2	Cylinders of Annular Cross-Section with Small Axial Dimension (Rings).	142
6.3	Long Cylinders of Annular Cross-Section	145
6.4	Long Circular Cylinder with Clamped Ends or Indefinitely Extended in the Direction of Its Axis and Subjected to Thermal Load Defined by a Generic Function $T = T(r)$	149
6.4.1	Long Circular Cylinder with Clamped Ends or Indefinitely Extended in the Direction of Its Axis and Subjected to Thermal Load Defined by Fourier's Law	153
6.5	Circular Cylinder of Finite Length with Free Ends and Subjected to Thermal Load Defined by a Generic Function $T = T(r)$	161
6.5.1	Circular Cylinder of Finite Length with Free Ends and Subjected to Thermal Load Defined by Fourier's law.	165
6.6	Edge Effects on the Free Ends of a Thin-Walled Circular Cylinder Subjected to Thermal Load.	171

6.7	Solid Circular Cylinder of Finite Length and with Free Ends, Subjected to Transient Thermal Load	174
7	Thick-Walled Circular Cylinders in the Linear Elastic-Perfectly Plastic State After Loading Beyond the Elastic Range	179
7.1	General and Scope	179
7.2	Yield Theories	181
7.3	General Considerations on the Use of Yield Theories	188
7.4	Elastic-Breakdown Pressure	192
7.5	Circular Cylinder Loaded Beyond Initial Yielding	199
7.5.1	Autofrettage Procedures	199
7.5.2	Analysis of Circular Cylinders Loaded Beyond Initial Yielding	201
7.5.3	Plastic Reserve	209
8	Autofrettage of Thick-Walled Circular Cylinders	211
8.1	General Considerations on Autofrettage	211
8.2	Residual and Working Stresses	212
8.3	Design Considerations for Autofrettage: Overstressing and Overstrain	216
8.4	Residual Stresses Resulting from Partial Overstrain, Without Reverse Yielding	217
8.5	Limit Conditions for Reverse Yielding	218
8.6	Residual Stresses Resulting from Full Overstrain, with Reverse Yielding	222
8.7	Repressurizing a Circular Cylinder After Reverse Yielding	228
8.8	Design Criteria for Autofrettage	232
8.9	Autofrettage of Composite Multilayer Structures	237
9	Thick-Walled Circular Cylinders in the Elasto-Plastic State or Viscous State as a Result of Steady-State Creep	239
9.1	General	239
9.2	Introductory Remarks on Creep	240
9.2.1	Theories for Creep Under Constant Uniaxial Stress	242
9.2.2	Theories for Creep Under Variable Uniaxial Stress	243
9.2.3	Effects of the Multiaxial Stress State	245
9.3	Stress Analysis in the Full Plastic or Steady-State Viscous State	246
9.4	Partial Plasticization: Mixed Plastic and Elastic Strain State	252

9.5	Comparison Between the Four Yield Theories Considered. . . .	256
9.6	Partial Plasticization in More General Terms	257
9.7	Multilayer Circular Cylinders.	265
10	Bending Theory of Circular Cylindrical Shells Under	
	Axisymmetric Loads.	275
10.1	General Considerations and Fundamental Relations	275
10.2	Long Circular Cylindrical Shells Subjected to Concentrated Loads on One Edge.	282
10.3	Long Circular Cylindrical Shells with Constrained Edges Under Uniform Internal Pressure.	287
10.3.1	Calculation Example.	288
10.4	Long Circular Cylindrical Shells Subjected to Concentrated Line Load Distributed Uniformly Along a Circumference	290
10.5	Long Circular Cylindrical Shells Subjected to Load Distributed Through a Portion of Finite Length	293
10.6	Analysis of Short Circular Cylindrical Shells.	295
10.7	Analysis of Circular Cylindrical Shells Reinforced by Equidistant Stiffening Rings	299
10.8	Stress Analysis in a Reinforced Circular Cylindrical Shell. . .	302
10.8.1	Calculation Example.	305
11	Cylindrical Pressure Vessels	307
11.1	General	307
11.2	Cylindrical Pressure Vessels with Flat-Plate Closures: Closure Absolutely Rigid in Its Own Plane	309
11.2.1	Calculation Example.	313
11.3	Cylindrical Pressure Vessels with Flat-Plate Closures: Closure Deformable in Its Own Plane.	314
11.3.1	Calculation Example.	316
11.4	Cylindrical Pressure Vessels with Flat-Plate Closures: Closure Deformable in Its Own Plane and Middle Plane Which does not Coincide with the Junction Plane	317
11.4.1	Calculation Example.	319
11.5	Cylindrical Pressure Vessels with Flat-Plate Closures that are Deformable in Their Own Plane: Relations Obtained by Other Researchers	321
11.5.1	Calculation Example.	322
11.6	Cylindrical Pressure Vessels with Formed Closures Having Hemispherical Meridian Curve (Hemispherical Dished Heads)	324
11.6.1	Calculation Examples	330

11.7	Cylindrical Pressure Vessels with Formed Closures Having Semielliptical Meridian Curve (Elliptical Dished Heads).	331
11.8	The Problem of Discontinuity in Cylindrical Pressure Vessels with Formed Closures Having Semielliptical Meridian Curve	335
11.8.1	Calculation Example.	348
11.9	Thickness Discontinuities Between Cylindrical Shells.	349
11.9.1	Calculation Example.	351
References	353
Name Index	369
Subject Index	373
