1	Image Motion Processing in Visual Function.	1
1.1	Image Motion in Visual Function.	1
1.2	Computer Vision Applications.	5
1.3	Variational Processing of Image Motion.	6
	References	11
2	Background Preliminaries	13
2.1	Curvature	13
2.1.1	Curvature of a Parametric Curve	13
2.1.2	Curvature of an Implicit Curve	15
2.2	Euler-Lagrange Equations	18
2.2.1	Definite Integrals	18
2.2.2	Variable Domain of Integration	22
2.3	Differentiation Under the Integral Sign.	31
2.4	Descent Methods for Unconstrained Optimization	31
2.4.1	Real Functions.	32
2.4.2	Integral Functionals	33
2.5	Level Sets.	35
	References	40
3	Optical Flow Estimation.	41
3.1	Introduction.	41
3.2	The Optical Flow Constraint	45
3.3	The Lucas-Kanade Algorithm	47
3.4	The Horn and Schunck Algorithm	48
3.4.1	Discretization	49
3.4.2	Gauss-Seidel and Jacobi Iterations	50
3.4.3	Evaluation of Derivatives	51
3.4.4	Ad hoc Variations to Preserve Motion Boundaries.	52
3.5	Deriche–Aubert–Kornprobst Method	54

3.6	Image-Guided Regularization	59
3.6.1	The Oriented-Smoothness Constraint	61
3.6.2	Selective Image Diffusion	61
3.7	Minimum Description Length	63
3.8	Parametric Estimation	67
3.9	Variations on the Data and Smoothness Terms	70
3.10	Multiresolution and Multigrid Processing	70
3.10.1	Multiresolution Processing	71
3.10.2	Multigrid Computation	72
3.11	Joint Estimation and Segmentation	75
3.12	Joint Optical Flow and Disparity Estimation	83
3.13	State-of-the-Art	87
	References	88
4	Motion Detection	95
4.1	Introduction	95
4.2	Background Modelling and Point-Wise Background Subtraction	99
4.2.1	Parametric Modelling: The Stauffer–Grimson Method	99
4.2.2	Nonparametric Modelling	102
4.2.3	Image Spatial Regularization	102
4.3	Variational Background Subtraction	104
4.3.1	Probability Models	105
4.3.2	Template Models	107
4.4	Detection by Image Differencing	113
4.4.1	Region-Based Image Differencing Detection	114
4.4.2	MAP Image Differencing Detection	116
4.4.3	Boundary-Based Image Differencing Detection	117
4.5	Optical Flow Based Motion Detection	121
4.6	Motion Detection with a Moving Viewing System	125
4.6.1	Region Based Detection Normal Component Residuals	125
4.6.2	Detection by Optical Flow Residuals	128
4.6.3	Detection by a Geodesic	130
4.6.4	A Contrario Detection by Displaced Frame Differences	130
4.7	Selective Detection	132
4.7.1	Connected Component Analysis	133
4.7.2	Variational Integration of Object Features in Motion Detection	134
4.8	Motion Segmentation	137
	References	139

5 Tracking	143
5.1 Introduction	143
5.2 Kernel-Based Tracking	148
5.2.1 Mean-Shift Density Mode Estimation	148
5.2.2 Tracking	150
5.3 Active Curve Density Tracking	152
5.3.1 The Bhattacharyya Flow	153
5.3.2 The Kullback-Leibler Flow	155
5.3.3 Level Set Equations	156
5.4 Tracking by Region-Based Matching	157
5.4.1 Basic Formulation	157
5.4.2 Matching Local Statistics	160
5.4.3 Using Shape and Motion	161
5.5 Tracking in the Spatiotemporal Domain	165
References	170
 6 Optical Flow Three-Dimensional Interpretation	 175
6.1 Introduction	175
6.2 Projection Models	177
6.3 Ego-Motion in a Static Environment	181
6.3.1 Indirect Interpretation	182
6.3.2 Direct Interpretation	183
6.4 Non-Stationary Environment	184
6.4.1 Point-Wise Interpretation	185
6.4.2 Region-Based Interpretation	188
6.5 Scene Flow	197

Computer Vision Analysis of Image Motion by Variational
Methods

Mitiche, A.; Aggarwal, J.K.

2014, VII, 207 p. 54 illus., 29 illus. in color., Hardcover

ISBN: 978-3-319-00710-6
