

# Contents

<b>1</b>	<b>Introduction</b>	1
	References	7
<b>2</b>	<b>Early Universe Cosmology</b>	11
2.1	Composition of the Universe.	11
2.1.1	CMB Photons.	12
2.1.2	Relic Neutrinos.	13
2.1.3	Baryonic Matter	15
2.1.4	Dark Matter	17
2.1.5	Dark Energy.	19
2.1.6	Stages in the Expansion History	20
2.2	The Hot Thermal Phase	23
2.2.1	The Cosmic Microwave Background.	23
2.2.2	Primordial Nucleosynthesis	27
2.2.3	Phase and Topological Transitions	30
	References	34
<b>3</b>	<b>Framework for a Consistent Cosmology</b>	39
3.1	Beyond the Standard Model	39
3.1.1	Inflation.	40
3.1.2	Right-Handed Neutrinos and the Seesaw Mechanism	47
3.1.3	Baryogenesis	52
3.1.4	Particle Candidates for Dark Matter	56
3.2	Spontaneous Breaking of $B-L$ as the Origin of the Hot Early Universe.	61
3.2.1	Reheating through Heavy (S)neutrino Decays.	62
3.2.2	Froggatt–Nielsen Flavour Structure	64
	References	70
<b>4</b>	<b>Neutrino Phenomenology</b>	77
4.1	Monte-Carlo Sampling of $\mathcal{O}(1)$ Factors	77
4.2	Predictions for Neutrino Observables.	81
4.3	Analytic Derivation of the Majorana Phase $\alpha_{21}$	86
	References	88

<b>5</b>	<b>Supersymmetric Abelian Higgs Model</b>	89
5.1	Before Spontaneous Symmetry Breaking	89
5.1.1	From Superspace to the Component Lagrangian	90
5.1.2	General Lagrangian in Arbitrary Gauge	98
5.1.3	Gauge and Mass Eigenstates	100
5.2	During and After Spontaneous Symmetry Breaking	105
5.2.1	Lagrangian of the SSB Sector in Unitary Gauge	105
5.2.2	Physical Degrees of Freedom and Time-Dependent Masses	107
5.2.3	Decay Rates and Branching Ratios	111
	References	116
<b>6</b>	<b>Nonperturbative Dynamics</b>	117
6.1	Production of Cosmic Strings	117
6.2	Tachyonic Preheating	122
	References	127
<b>7</b>	<b>The Reheating Process</b>	129
7.1	Boltzmann Equations	129
7.1.1	Symmetry-Breaking Sector	131
7.1.2	Neutrino Sector	134
7.1.3	MSSM Degrees of Freedom	143
7.1.4	Gravitinos	150
7.2	Time Evolution of the Particle Abundances	151
7.2.1	Particle Masses and Couplings	152
7.2.2	Decay of the Massive Particles	154
7.2.3	Reheating and the Temperature of the Thermal Bath	157
7.2.4	Small Departures from Thermal Equilibrium	160
7.2.5	Robustness Against Theory Uncertainties	165
7.3	Scan of the Parameter Space	168
7.3.1	Reheating Temperature	169
7.3.2	Baryon Asymmetry	172
7.3.3	Gravitino Dark Matter	176
	References	181
<b>8</b>	<b>WIMP Dark Matter from Heavy Gravitino Decays</b>	183
8.1	Thermal and Nonthermal Neutralino Production	183
8.2	Relations Between Neutralino, Gravitino and Neutrino Masses	186
8.3	Prospects for Direct Detection and Collider Experiments	189
	References	190

Contents	xiii
<b>9 Conclusions and Outlook</b> . . . . .	193
References . . . . .	197
<b>Appendix A: Statistical Thermodynamics</b> . . . . .	199
<b>Appendix B: <i>CP</i> Violation in 2-to-2 Scattering Processes</b> . . . . .	205
<b>Appendix C: Thermal Gravitino Production</b> . . . . .	211
<b>About the Author</b> . . . . .	217
<b>Curriculum Vitae</b> . . . . .	219

The B–L Phase Transition

Implications for Cosmology and Neutrinos

Schmitz, K.

2014, XIII, 221 p. 19 illus., 10 illus. in color., Hardcover

ISBN: 978-3-319-00962-9
