

Contents

1	Introduction	1
1.1	Overview of the Standard Model (SM)	1
1.2	Discrete Symmetries	3
1.3	Mixing Formalism	4
1.4	The Three Types of CP Violation	6
1.4.1	Direct CP Violation	7
1.4.2	CP Violation in Mixing	7
1.4.3	CP Violation in the Interference Between Decay and Mixing	7
1.5	CP Violation in the Standard Model	8
1.5.1	The CKM Matrix	9
1.5.2	The CKM Parameterisations	10
1.5.3	The Unitary Triangle (UT)	11
1.5.4	Global Fits to V_{CKM}	13
1.6	Tree Level Determination of γ with $B \rightarrow DK$ Decays	14
1.6.1	GLW Method	16
1.6.2	ADS Method	17
1.6.3	Physical Observables	18
	References	22
2	The LHCb Experiment at the LHC	25
2.1	The LHC at CERN	25
2.2	The LHCb Detector	28
2.2.1	LHCb Detector Running Conditions	30
2.2.2	VELO	32
2.2.3	Dipole Magnet	35
2.2.4	Tracking Stations	36
2.2.5	RICH	38
2.2.6	Calorimeters	39
2.2.7	Muon Stations	43
2.2.8	Trigger	44
2.2.9	Track Reconstruction	47

2.2.10	Particle Identification (PID)	48
2.2.11	LHCb Software Framework	51
	References	52
3	Reconstruction and Selection	55
3.1	Overview of the $B \rightarrow [hh]_D h$ Decay Modes	55
3.2	The First Favoured $B \rightarrow [K\pi]_D \pi$ Candidate	56
3.3	Datasets and MC Samples	57
3.4	Stripping	59
3.5	Selection: A MVA Approach	60
3.5.1	Input Samples and Variables	61
3.5.2	Performance and Optimal Cut Evaluation	63
3.6	Trigger Requirements	68
3.7	Multiple Candidate Arbitration	69
3.8	Total Efficiencies and Expected Yields	69
3.9	Resolution and Mass Lineshapes	71
3.9.1	Correctly Reconstructed $B \rightarrow [hh]_D h$ Peaks	72
3.9.2	D Mass Constraint and MC Lineshapes	73
3.9.3	Lineshapes in Data and Signal Mass Windows	75
3.9.4	$B \rightarrow Dh$ Misidentified Shape	78
3.10	Momentum Rescaling	80
3.11	PID Calibration	83
	References	85
4	Background Studies	87
4.1	Combinatorial Background	87
4.2	Backgrounds from Decays with Muons	89
4.2.1	Charmonium Veto	89
4.2.2	Semileptonic Backgrounds	91
4.3	Partially Reconstructed Backgrounds	92
4.3.1	Partially Reconstructed Topology	93
4.3.2	Partially Reconstructed Inclusive Sample and PDFs	96
4.4	Charmless Backgrounds	104
4.4.1	Selecting on D Flight Distance	105
4.4.2	Charmless Expectations from MC	106
4.4.3	Charmless Expectations from Data Sidebands: $[KK, \pi\pi]_D$	109
4.5	$B \rightarrow [hh]_D h$ Internal Cross Feed	112
4.5.1	Misidentification of the $[hh]_D$ Daughter Tracks	113
4.5.2	Internal Bachelor-Daughter Combinatorial Background	114
4.5.3	Favoured $\rightarrow$ Suppressed-Mode Cross Feed	116
	References	122

5 The Simultaneous Fit	123
5.1 Fitter Strategy	123
5.1.1 Introduction	123
5.1.2 Fitter Components	125
5.1.3 Yields	127
5.1.4 Charge Asymmetries	127
5.2 Validation	129
5.3 Systematic Uncertainties	130
5.3.1 Multiplicative Corrections on $R_{K/\pi}^{hh}$	131
5.3.2 Systematic Error on the Bachelor PID Variable	133
5.3.3 Propagation Through the Final Fit	136
References	139
6 Results	141
6.1 Numerical Fit Results	141
6.2 Yield Comparison	142
6.3 The CP Observables	146
6.4 Statistical Significance of the Measurements	148
6.5 Comparison with Existing Measurements	149
6.6 A Preliminary Fit to the CKM Angle γ	150
6.6.1 Likelihood Scan Including Only $B \rightarrow [hh]_D K$ Observables	151
6.6.2 Likelihood Scan Including the GGSZ Analysis	153
6.6.3 Including the Systematical Uncertainties on r_D and δ_D	153
References	155
7 Conclusions	157
Reference	158
Appendix A: Distributions of the BDT Input Variables	159
Appendix B: Validation of the A_{pT} Variable	161
Appendix C: Histograms of Systematic Errors	163
Appendix D: Curriculum Vitae	167
