

Contents

1	Classification of Fluids	1
1.1	The Continuum Hypothesis	1
1.2	Definition of a Fluid	2
1.3	What is Rheology?	4
1.4	Non-Newtonian Fluids	4
1.4.1	Time Independent Fluids	8
1.4.2	Time Dependent Fluids	10
1.4.3	Viscoelastic Fluids	11
1.4.4	The Deborah Number	16
1.4.5	Closure	16
2	Flow Phenomena	17
2.1	The Effect of Shear Thinning in Tube Flow	17
2.2	Rod Climbing	18
2.3	Axial Annular Flow	19
2.4	Extrudate Swell	19
2.5	Secondary Flow in a Plate/Cylinder System	20
2.6	Restitution	21
2.7	Tubeless Siphon	21
2.8	Flow Through a Contraction	22
2.9	Reduction of Drag in Turbulent Flow	22
3	Basic Equations in Fluid Mechanics	25
3.1	Kinematics	25
3.2	Continuity Equation: Incompressibility	29
3.3	Equations of Motion	31
3.3.1	Cauchy's Stress Theorem	33
3.3.2	Cauchy's Equations of Motion	34
3.3.3	Cauchy's Equations in Cartesian Coordinates (X, Y, Z)	36
3.3.4	Extra Stress Matrix, Extra Coordinate Stresses, and Cauchy's Equations in Cylindrical Coordinates (R, θ , Z)	37

3.3.5	Extra Stress Matrix, Extra Coordinate Stresses, and Cauchy's Equations in Spherical Coordinates (r, θ, ϕ)	38
3.3.6	Proof of the Statement	39
3.4	Navier–Stokes Equations.	39
3.5	Modified Pressure	41
3.6	Flows with Straight, Parallel Streamlines	41
3.7	Flows Between Parallel Planes	42
3.8	Pipe Flow	48
3.9	Film Flow	53
3.10	Energy Equation	56
3.10.1	Energy Equation in Cartesian Coordinates (x, y, z)	60
3.10.2	Energy Equation in Cylindrical Coordinates (R, θ, z)	60
3.10.3	Temperature Field in Steady Simple Shear Flow	60
4	Deformation Kinematics.	63
4.1	Rates of Deformation and Rates of Rotation	63
4.1.1	Rectilinear Flow with Vorticity: Simple Shear Flow.	69
4.1.2	Circular Flow Without Vorticity. The Potential Vortex	70
4.1.3	Stress Power: Physical Interpretation	73
4.2	Cylindrical and Spherical Coordinates	74
4.3	Constitutive Equations for Newtonian Fluids.	75
4.4	Shear Flows	76
4.4.1	Simple Shear Flow.	76
4.4.2	General Shear Flow	77
4.4.3	Unidirectional Shear Flow.	78
4.4.4	Viscometric Flow.	79
4.5	Extensional Flows	85
4.5.1	Definition of Extensional Flows.	85
4.5.2	Uniaxial Extensional Flow	87
4.5.3	Biaxial Extensional Flow	87
4.5.4	Planar Extensional Flow \equiv Pure Shear Flow.	88
5	Material Functions.	91
5.1	Definition of Material Functions	91
5.2	Material Functions for Viscometric Flows.	92
5.3	Cone-and-Plate Viscometer	95
5.4	Cylinder Viscometer.	101
5.5	Steady Pipe Flow.	103
5.6	Material Functions for Steady Extensional Flows.	108
5.6.1	Measuring the Extensional Viscosity	110

6	Generalized Newtonian Fluids	113
6.1	General Constitutive Equations	113
6.2	Helix Flow in Annular Space	117
6.3	Non-Isothermal Flow	121
6.3.1	Temperature Field in a Steady Simple Shear Flow	122
7	Linearly Viscoelastic Fluids	125
7.1	Introduction	125
7.2	Relaxation Function and Creep Function in Shear	125
7.3	Mechanical Models	129
7.4	Constitutive Equations	131
7.5	Stress Growth After a Constant Shear Strain Rate	135
7.6	Oscillations with Small Amplitude	137
7.7	Plane Shear Waves	139
8	Advanced Fluid Models	143
8.1	Introduction	143
8.2	Tensors and Objective Tensors	147
8.3	Reiner-Rivlin Fluids	153
8.4	Corotational Derivative	155
8.5	Corotational Fluid Models	156
8.6	Quasi-Linear Corotational Fluid Models	159
8.7	Oldroyd Fluids	160
8.7.1	Viscometric Functions for the Oldroyd 8-Constant Fluid	163
8.7.2	Extensional Viscosity for the Oldroyd 8-Constant Fluid	165
8.8	Non-Linear Viscoelasticity: The Norton Fluid	167
	Symbols	169
	Problems	173
	References	183
	Index	185

Rheology and Non-Newtonian Fluids

Irgens, F.

2014, IX, 190 p. 103 illus., 65 illus. in color., Hardcover

ISBN: 978-3-319-01052-6
