

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Outline	3
<b>2</b>	<b>Background and Theoretical Framework</b>	<b>7</b>
2.1	Graphene Basics	7
2.1.1	From the Tight-Binding Model to the Dirac Equation	9
2.1.2	Relativistic Behavior of Low-Energy Carriers in Graphene	13
2.2	Superconductivity Basics I: Proximity Effect	16
2.2.1	Proximity Effect on a Normal Metal-Superconductor Junction	18
2.3	Superconductivity Basics II: Andreev Reflection	19
2.3.1	The Concept of Andreev Reflection	19
2.3.2	Transport at a Normal Metal-Superconductor Interface	20
2.3.3	Andreev Reflection in Graphene: Specular and Retro	22
2.3.4	The BTK Model Applied to Graphene	24
2.3.5	Nonlocal Transport and Crossed Andreev Reflection	24
	References	26
<b>3</b>	<b>Green Functions Techniques for Graphene Layers with Edges</b>	<b>31</b>
3.1	Introduction	31
3.2	Tight-Binding Description of Isolated Graphene Layers	32
3.2.1	Semi-Infinite Armchair Graphene Layer	32
3.2.2	Finite Armchair Graphene Layer	34
3.2.3	Semi-Infinite Zigzag Graphene Layer	35
3.3	Continuous Approach to Graphene Layers with Edges	36
3.3.1	Armchair Edges	38
3.3.2	Zigzag Edges	42
3.3.3	Bulk Green Functions	45
3.4	Dyson Equation for Coupling Separate Regions	46
3.5	Conclusion and Discussion	49
	References	50

<b>4</b>	<b>The Graphene-Superconductor Interface</b>	51
4.1	Introduction	51
4.2	Modeling the Graphene-Superconductor Interface	52
4.2.1	HDSC Graphene Electrodes Versus Bulk-BCS Electrodes.	54
4.2.2	Influence of the Electrodes on the Andreev Reflection	56
4.3	Proximity Effect on a Graphene Layer.	58
4.3.1	Equation for the Minigap.	59
4.3.2	Local Density of States	62
4.3.3	Semi-Infinite Graphene Layer Within the TB Approach	63
4.3.4	LDOS Within the Continuous Approach Influence of the Edges.	65
4.4	Proximity Induced Interface Bound States	69
4.4.1	IBS from Solution Matching at a Graphene NIS System	69
4.4.2	Interface Along an Armchair Edge	71
4.4.3	Interface Along a Zigzag Edge	73
4.4.4	Effect of a Supercurrent.	75
4.4.5	Effects of Disorder on the IBS	76
4.5	Conclusion and Discussion	79
	References	80
<b>5</b>	<b>Nonlocal Transport in Graphene</b>	83
5.1	Introduction	83
5.2	Electron-Hole Correlations on the GS System.	84
5.3	Focusing of Electrons and Holes in a GSG System	88
5.3.1	Electron Optics in Graphene.	88
5.3.2	Independent Focusing of Electrons and Holes.	91
5.3.3	Focusing in the Tunnel Limit.	94
5.3.4	Deviations from the Ideal Case.	95
5.4	Conclusions	97
	References	98
<b>6</b>	<b>Cooper Pair Beam Splitters in Double Quantum Dots</b>	101
6.1	Introduction	101
6.2	Experiments in Double Quantum Dot Structures Made in Carbon Nanotubes and InAs Nanowires	103
6.3	Microscopic Theory of Cooper Pair Beam Splitters in Carbon Nanotubes	105
6.3.1	Normal State	106
6.3.2	Superconduction State	107

6.3.3 The Mapping into a Minimal Model and the Nonlinear Regime . . . . .	109
6.4 Conclusion and Discussion . . . . .	112
References . . . . .	113
<b>7 Summary and Conclusions . . . . .</b>	<b>115</b>
References . . . . .	117
<b>Appendix A: Methodology: Green Functions Techniques . . . . .</b>	<b>119</b>
<b>Appendix B: Transport in Superlattices on Single Layer Graphene. . .</b>	<b>131</b>
<b>Appendix C: Scattering Amplitudes at the Graphene- Superconductor Interface . . . . .</b>	<b>147</b>
<b>Appendix D: Green Functions Techniques Applied to Carbon Nanotubes. . . . .</b>	<b>151</b>
<b>Appendix E: Equation of Motion Approach to Include Interactions. . . . .</b>	<b>155</b>
<b>List of Publications . . . . .</b>	<b>157</b>

Superconductivity in Graphene and Carbon Nanotubes

Proximity effect and nonlocal transport

Burset Atienza, P.

2014, XIX, 157 p. 43 illus., 7 illus. in color., Hardcover

ISBN: 978-3-319-01109-7
