Part I Introduction

1 Sunscreen Cosmetics: Advantages and Drawbacks	3
1.1 The Protective Skin Barrier	3
1.2 Interaction Between Electromagnetic Radiation and Skin: Phototoxicology.	4
1.3 The Cosmetics for Sun Protection in the European Union	6
1.3.1 UV Filters. Classification and Properties	7
1.4 Disposition of the UV Filters in the Human Body	9
1.4.1 Percutaneous Absorption	9
1.4.2 Distribution	11
1.4.3 Biotransformation	11
1.4.4 Excretion	13
1.5 Methodology for the Study of Processes Derived from the Percutaneous Absorption of UV Filters Contained in Sunscreen Cosmetics	13
1.5.1 <i>In Vitro</i> Methodology	14
1.5.2 <i>In Vivo</i> Methodology.	18
1.6 Effect of the UV Filters in the Male Reproductive System	18
1.6.1 Effects of Toxics on the Reproductive System	19
1.6.2 Evaluation of Reproductive Capacity.	19
1.6.3 Risk Factors for Human Fertility	20
References	21

Part II In Vitro Methodology

2 Development of a Chromatographic Method to Estimate the <i>In Vitro</i> Percutaneous Absorption of Hydrosoluble UV Filters	37
2.1 Introduction	37
2.1.1 Aim of the Study	39

2.1.2	Background and Current Status of the Issue	40
2.2	Experimental.	41
2.2.1	Reagents and Samples	41
2.2.2	Equipment and Material.	42
2.2.3	Analytical Method for the Simultaneous Determination of Hydrosoluble UV Filters in the Receptor Fluid from Diffusion Cells	42
2.3	Results and Discussion.	45
2.3.1	Study of the Chromatographic Variables	45
2.3.2	Validation of the Proposed Analytical Method: Study of the Interferences and Accuracy	49
2.3.3	Application of the Analytical Method	50
2.4	Conclusions	53
	References	53

Part III In Vivo Methodology

3	Determination of the Unconjugated Forms of Benzophenone-3 and Benzophenone-4 in Urine by Solid-Phase Extraction Coupled to a Liquid Chromatographic System with UV/Vis Detection by Using Automated Sequential Injection Analysis.	83
3.1	Introduction	83
3.1.1	Aim of the Study	83
3.1.2	Background and Current Status of the Issue.	83
3.2	Experimental.	84
3.2.1	Reagents and Samples	84
3.2.2	Instruments and Material	85
3.2.3	Analytical Method for the Determination of Benzophenone-3 and Benzophenone-4 in Their Unconjugated Forms in Urine	85
3.3	Results and Discussion.	86
3.3.1	Study of the Experimental Variables	88
3.3.2	Validation of the Analytical Method: Study of the Interferences	96
3.3.3	Application of the Analytical Method	98
3.4	Conclusions	100
	References	101
4	Determination of Benzophenone-3 and Their Metabolites in Urine by Solid-Phase Extraction and Liquid Chromatography Tandem Mass Spectrometry.	103
4.1	Introduction	103
4.1.1	Aim of the Study	103

4.1.2	Background and Current Status of the Issue	103
4.2	Experimental.	104
4.2.1	Reagents and Samples	104
4.2.2	Instruments and Material	105
4.2.3	Analytical Method for the Determination of Benzophenone-3 and its Metabolites in Urine.	105
4.3	Results and Discussion.	107
4.3.1	Study of Experimental Variables.	107
4.3.2	Validation of the Analytical Method: Study of the Interferences	109
4.3.3	Application of the Proposed Method	111
4.4	Conclusions	113
	References	113
5	Determination of Benzophenone-3 and its Metabolites in Human Semen by Solid-Phase Extraction and Liquid Chromatography Tandem Mass Spectrometry	115
5.1	Introduction	115
5.1.1	Aim of the Study	115
5.1.2	Background and Current Status of the Issue.	115
5.2	Experimental.	116
5.2.1	Reagents and Samples	116
5.2.2	Instruments and Material	116
5.2.3	Analytical Method for the Determination of Benzophenone-3 and its Metabolites in Semen	117
5.3	Results and Discussion.	119
5.3.1	Study of the Experimental Variables	119
5.3.2	Validation of the Analytical Method: Study of the Interferences	119
5.3.3	Application of the Analytical Method	122
5.4	Conclusions	124
	References	124
6	Elucidation of the <i>In Vitro</i> Biotransformation Products of Ethylhexyl Dimethyl PABA by Chromatographic Techniques Coupled to Mass Spectrometry.	127
6.1	Introduction	127
6.1.1	Aim of the Study	127
6.1.2	Background and Current Status of the Issue.	128
6.2	Experimental.	129
6.2.1	Reagents and Samples	129
6.2.2	Instruments and Material	129
6.2.3	Experimental Procedures	130

6.3	Results and Discussion	133
6.3.1	Study of the Experimental Variables	134
6.3.2	Identification of the Phase I Metabolites Ethylhexyl Dimethyl PABA	134
6.3.3	Study of the <i>In Vitro</i> Phase II Metabolism of Ethylhexyl Dimethyl PABA	136
6.3.4	Validation of the Analytical Method to Determine Ethylhexyl Dimethyl PABA and its Phase I Metabolites in Urine	138
6.4	Conclusions	143
	References	143
7	Elucidation of the <i>In Vivo</i> Biotransformation Products of Ethylhexyl Dimethyl PABA by Liquid Chromatographic Techniques with Mass Spectrometry Detectors	145
7.1	Introduction	145
7.1.1	Aim of the Study	145
7.1.2	Background and Current Status of the Issue	146
7.2	Experimental.	147
7.2.1	Reagents and Samples	147
7.2.2	Instruments and Material	147
7.2.3	Analytical Method to Determine Ethylhexyl Dimethyl PABA and its Metabolites in Urine	148
7.2.4	<i>In Vivo</i> Metabolism of Ethylhexyl Dimethyl PABA	151
7.3	Results and Discussion.	152
7.3.1	Study of the Experimental Variables	152
7.3.2	Validation of the Analytical Method: Study of the Interferences	156
7.3.3	Elucidation of the <i>In Vivo</i> Phase II Metabolism of Ethylhexyl Dimethyl PABA	158
7.3.4	Application of the Analytical Method	162
7.4	Conclusions	164
	References	164
8	Determination of Ethylhexyl Dimethyl PABA and its Metabolites in Semen by Automated Solid-Phase Extraction and Liquid Chromatography Tandem Mass Spectrometry	167
8.1	Introduction	167
8.1.1	Aim of the Study	167
8.1.2	Background and Current Status of the Issue	168
8.2	Experimental.	168
8.2.1	Reagents and Samples	168
8.2.2	Instruments and Material	168

8.2.3	Analytical Method to Determine Ethylhexyl Dimethyl PABA and its Metabolites in Semen	169
8.3	Results and Discussion.	172
8.3.1	Study of the Experimental Variables	172
8.3.2	Validation of the Analytical Method: Study of the Interferences	174
8.3.3	Application of the Analytical Method	176
8.4	Conclusions	179
	References	180
9	Determination of Methyl Benzylidene Camphor and its Main Metabolite in Urine by Solid-Phase Extraction and Liquid Chromatography Tandem Mass Spectrometry	181
9.1	Introduction	181
9.1.1	Aim of the Study	181
9.1.2	Background and Current Status of the Issue.	181
9.2	Experimental.	182
9.2.1	Reagents and Samples	182
9.2.2	Instruments and Material	183
9.2.3	Synthesis and Characterization of Carboxy Benzylidene Camphor	183
9.2.4	Analytical Method for the Determination of Methyl Benzylidene Camphor and its Major Metabolite in Urine	186
9.3	Results and Discussion.	187
9.3.1	SPE Procedure: Study of the Variables	187
9.3.2	LC-MS/MS Analysis	190
9.3.3	Study of Sample Stability	190
9.3.4	Validation of the Analytical Method: Study of the Interferences	190
9.3.5	Application of the Analytical Method	193
9.4	Conclusions	196
	References	196
 Part IV Summary and General Conclusions		
10	Highlights of the Ph.D. Thesis	201
10.1	Part II: Methodology to Estimate the <i>In Vitro</i> Percutaneous Absorption Processes of the UV Filters Contained in Sunscreen Cosmetics	201
10.2	Part III: Methodology to Study Related Processes from the <i>In Vivo</i> Percutaneous Absorption of the UV Filters Contained in Sunscreen Cosmetics.	202

10.2.1 Part III. 1 Benzophenone-3	202
10.2.2 Part III. 2 Ethylhexyl Dimethyl PABA	203
10.2.3 Part III. 3 Methyl Benzyliden Camphor	205
Annex I: Key Used	207
Annex II: Protocols to Develop the Sunscreen Cosmetic Products Used in this Ph.D. Thesis	209
Annex III: Statistical Tests	213

Percutaneous Absorption of UV Filters Contained in
Sunscreen Cosmetic Products

Development of Analytical Methods
