

Contents

1	Introduction to Gravitational Theories and Cosmology	1
1.1	Tensor Calculus, the Metric and Curvature	1
1.1.1	Notation, Coordinates and Tensors	2
1.1.2	The Metric	3
1.1.3	Curvature	7
1.2	General Relativity	9
1.2.1	Exact Analytic Solutions to Einstein's Field Equations	10
1.2.2	Perturbative Gravity	12
1.2.3	Field Equations from an Action	13
1.2.4	Review of the Gibbons–Hawking Term	15
1.3	Cosmology	18
1.3.1	The Cosmological Background	20
1.3.2	Cosmological Perturbations	22
1.3.3	The Dark Side	25
1.4	Modified Gravity	27
1.4.1	A Catalogue of Modified Gravity Theories	30
1.4.2	Einstein & Jordan Frames	34
1.5	Summary	36
	References	37
2	The Effective Action Formalism for Cosmological Perturbations	43
2.1	Introduction	43
2.2	Approaches to Parameterizing Dark Sector Perturbations	44
2.2.1	Parameterized Post-Friedmannian Approach	44
2.2.2	Generalized Gravitational Field Equations	45
2.2.3	Effective Action Approach	46
2.3	Formalism	47
2.3.1	Second Order Lagrangian	47
2.3.2	Isotropic (3 + 1) Decomposition	51
2.3.3	Perturbation Theory	53
	References	56

3	Metric Only and First Order Scalar Field Theory	59
3.1	Introduction	59
3.2	No Extra Fields: $\mathcal{L} = \mathcal{L}(g_{\mu\nu})$	59
3.3	Scalar Field Theory: $\mathcal{L} = \mathcal{L}(g_{\mu\nu}, \phi, \nabla_\mu \phi)$	63
3.3.1	Perturbed Euler–Lagrange Equation	64
3.3.2	Perturbed Dark Energy–Momentum Tensor and Conservation Equation	65
3.3.3	$(3 + 1)$ Decomposition of the Coupling Coefficients	66
3.3.4	Imposing Theoretical Restrictions	66
3.3.5	Scalar Fields $\mathcal{L} = \mathcal{L}(\mathcal{X}, \phi)$	70
3.3.6	Multiple Scalar Fields	71
3.3.7	Summary	71
3.4	Cosmological Perturbations	72
3.4.1	No Extra Fields	75
3.4.2	Scalar Fields	77
3.5	Summary	78
	References	79
4	High Derivative Theories	81
4.1	Introduction	81
4.1.1	Field Content	82
4.1.2	The Projectors	82
4.2	High-Order Metric Theories	86
4.3	High-Order Scalar Field Theories	88
4.3.1	The Lagrangian for Perturbations: $\mathcal{L}_{[2]}$	89
4.3.2	Operator Expansion of $\delta_L U^{\mu\nu}$	97
4.3.3	Imposing Theoretical Restrictions	98
4.3.4	Perturbed Fluid Variables for Second Order Field Equations	104
4.3.5	Summary	107
4.4	Scalar and High-Order Metric Theories	108
4.4.1	Perturbed Euler–Lagrange Equation	110
4.4.2	Perturbed Dark Energy Momentum Tensor	110
4.4.3	Theoretical Restrictions	112
4.4.4	Summary	115
4.5	Vector Field Theories	115
4.5.1	Field Content	116
4.5.2	Lagrangian for Perturbations of a Vector–Tensor Theory	117
4.6	More Examples	121
4.6.1	Bimetric Theories	121
4.6.2	Scalar–Vector–Tensor	122
4.6.3	High Order Scalars and Curvature Tensors	122
4.7	Summary	122
	References	124

5	Explicit Theories	127
5.1	Introduction	127
5.2	Kinetic Scalar Fields	127
5.3	Second Order Scalar Field Theory	130
5.4	$F(R)$ and Gauss–Bonnet Gravities	136
5.5	Summary	140
6	Connections to Massive Gravity	141
6.1	Introduction	141
6.1.1	Second Variation of the Einstein–Hilbert Action	142
6.1.2	Generalization to $F(R)$ Gravity	145
6.2	The General “Metric Only” Theory	146
6.3	Mechanisms for the Elimination of Ghosts	150
6.4	Imposing Reparameterization Invariance	152
6.5	Discussion	155
	References	156
7	Generalized Fluid Description	161
7.1	Introduction	161
7.2	Perturbed Fluid Variables and Fluid Equations	161
7.3	No Extra Fields	164
7.4	Scalar Fields	165
7.4.1	Reparameterization Invariant Scalar Fields	166
7.4.2	Equations of State for Dark Sector Perturbations	168
7.5	Possible Phenomenological Parameterizations for Scalar Perturbations	171
7.5.1	The $(\kappa, \lambda, \varepsilon)$ -Parameterization	171
7.5.2	The (α, β) -Parameterization	172
7.5.3	The Second Order Scalar Field Theory Parameterization	173
7.6	Summary	174
	References	174
8	Observational Signatures of Generalized Cosmological Perturbations	175
8.1	Introduction	175
8.2	Spectra	177
8.2.1	Observing Spectra	177
8.2.2	Matter Power Spectra	179
8.2.3	CMB Temperature Anisotropies	181
8.2.4	CMB Lensing Spectra	183
8.3	Effective Gravitational Coupling	185
8.4	Summary	191
	References	192

9 Discussion and Final Remarks	193
9.1 Summary	193
9.2 The Big Picture: Theory Versus Observation	195
References	196
About the Author	199

Generalized Perturbations in Modified Gravity and Dark Energy

Pearson, J.

2014, XIX, 200 p. 17 illus., 14 illus. in color., Hardcover

ISBN: 978-3-319-01209-4
