1	Introduction	1
1.1	Overview	1
1.2	Organics as Light Sources	1
1.3	The Project	3
1.4	The Thesis	4
	References	6
2	Theory of Organic Semiconductor Lasers	9
2.1	Introduction	9
2.2	Electronic Properties	10
2.2.1	Conjugated Molecules	10
2.2.2	Energy Levels	12
2.3	Types of Organic Semiconductors	14
2.4	Optical Properties	15
2.4.1	Absorption and Emission of Light	15
2.4.2	Light Amplification in Organic Semiconductors	18
2.5	Organic Semiconductor Lasers	21
2.5.1	Resonators for Organic Lasers	21
2.5.2	Pump Sources for Organic Lasers	28
	References	30
3	Experimental Methods	33
3.1	Introduction	33
3.2	Thin Film Preparation	33
3.3	Photophysical Characterization	35
3.3.1	Absorption and Photoluminescence Spectroscopy	35
3.3.2	Photoluminescence Quantum Yield	36
3.3.3	PL Lifetime Decay	38
3.3.4	Vase	39
3.4	Amplified Spontaneous Emission	42
3.4.1	ASE Threshold and Linewidth	43
3.4.2	Gain and Loss Coefficients	44
3.5	Distributed Feedback Resonator Fabrication	45
3.5.1	Solvent-Assisted Micro-molding	45

3.5.2	Two-Beam Interference Holography	46
3.5.3	Electron Beam Lithography	48
3.5.4	UV Nanoimprint Lithography	50
3.5.5	Reactive Ion Etching	51
3.5.6	Microstructure Characterization	52
3.6	Organic Semiconductor Laser Characterization	54
3.6.1	Laser Threshold	54
3.6.2	Angle Dependent Emission	55
3.7	Conclusions	56
	References	56
4	Low-Threshold and Broadly Tuneable Organic Lasers	
	Based on Star-Shaped Oligofluorene Truxenes	59
4.1	Introduction	59
4.2	Gain Media: Truxene T3 and T4	59
4.3	Photophysical Properties	61
4.4	ASE Studies of T3 and T4	62
4.4.1	ASE Thresholds	63
4.4.2	Gain and Loss	64
4.5	Optical Constants	66
4.6	Laser Threshold and Tunability Measurement	68
4.7	Beyond 3-Armed Truxene-Oligomers	72
4.8	Conclusions	75
	References	76
5	Commercial LED Pumped Organic Semiconductor Lasers	79
5.1	Introduction	79
5.2	Batches of Polymer BBEHP-PPV	80
5.3	Photophysical Studies	81
5.4	ASE Studies of BBEHP-PPV Films	82
5.5	Effect of Molecular Weight	83
5.6	Low Threshold BBEHP-PPV DFB Laser	87
5.6.1	Optimize the Lasing Wavelength	87
5.6.2	Choice of Laser Fabrication Method	89
5.6.3	Optimization of Laser Encapsulation	89
5.7	InGaN LEDs Power Characterization	92
5.8	LED Pumped BBEHP-PPV Lasers	94
5.8.1	Laser Emission Spectra Study	94
5.8.2	Laser Pulse Dynamics Study	95
5.8.3	Laser Beam Divergence Study	97
5.9	Conclusions	98
	References	99

6 Low Threshold Nanoimprinted Organic Lasers Integration with Micro-LED Arrays	101
6.1 Introduction	101
6.2 Pulsed Micro-LED Power Characterization	102
6.2.1 First Generation Device	103
6.2.2 Second Generation Device	104
6.3 Third Generation Micro-LEDs	106
6.3.1 New Geometry Design	106
6.3.2 Thinned Sapphire Substrate	108
6.3.3 New Driver for the Micro-LEDs	108
6.3.4 Power Output from the Micro-LED Stripes	108
6.4 Pump Beam Shape Dependent Lasing Threshold	110
6.5 Towards Micro-LED Pumped BBEHP-PPV Laser	111
6.6 Laser Resonator Development	112
6.6.1 Mixed-Order DFB Resonator	112
6.6.2 UV Nanoimprint lithography	112
6.7 Ultra-Low Threshold Nanoimprinted Laser	115
6.8 BBEHP-PPV Laser Pumped by LEDs	117
6.8.1 Commercial LEDs Pumping	117
6.8.2 Micro-LEDs Pumping	120
6.9 Conclusions	120
References	121
 7 Polymer with Intrinsic Microporosity Used as Explosive Vapour Sensors	 123
7.1 Introduction	123
7.2 Sensing Techniques and Principles	123
7.2.1 Main Non-Polymer Sensing Techniques	124
7.2.2 Criteria for an Explosive Sensor	125
7.2.3 Sensing Mechanism in Luminescent Polymers	125
7.3 Polymer with Intrinsic Microporosity	127
7.4 Photophysical and ASE Studies of PIM-1	128
7.5 Set-Up of Sensing Experiment	129
7.6 PL Sensing Using PIM-1 Films	130
7.6.1 Continuous Sensing	130
7.6.2 Cumulative Sensing	130
7.7 Highly Sensitive Laser Sensor	133
7.7.1 PIM-1 Laser Sensor	133
7.7.2 Comparison with PFO Sensors	134
7.8 Conclusions	136
References	136

8	Towards Ultra-Portable Hybrid Organic/Inorganic Explosives	
	Sensing Devices	139
8.1	Introduction	139
8.2	Explosive Sensor Based on a Hybrid Lifetime Micro-System . . .	139
8.2.1	Sensing Based on Fluorescence Lifetime	139
8.2.2	Copolymer “CDT Green”	141
8.2.3	Sensor Based on PL	143
8.2.4	Sensing Based on Conventional TCSPC System	144
8.2.5	CMOS Lifetime Analysis Micro-System	145
8.2.6	Ultra-Portable Organic/Inorganic Explosives Sensor	148
8.3	Hybrid Organic Laser Sensor	151
8.4	Conclusions	152
