Part I Physical Models

1 Kinetic and Hydrodynamic Models for Multi-Band Quantum Transport in Crystals	3
Luigi Barletti, Giovanni Frosali, and Omar Morandi	
1.1 Introduction	4
1.2 Envelope k-p Models	5
1.2.1 Wannier-Slater Envelope Functions Approach	7
1.2.2 Luttinger-Kohn Envelope Functions	10
1.2.3 Non Uniform Materials and Generalized Wannier Functions	12
1.2.4 Application of k-p Models to Heterostructures and Resonant Tunneling	15
1.2.5 Some Limits: Single and Mini-Band Transport	16
1.3 Wigner Approach	19
1.3.1 Introduction	19
1.3.2 Multi-Band Wigner Models	22
1.4 Hydrodynamic Models	24
1.4.1 Introduction	24
1.4.2 Scalar Quantum Fluid Equations	25
1.4.3 Spinorial and Multi-Band QFD	33
References	52
2 Electronic Properties of III-V Quantum Dots	57
Andrei Schliwa, Gerald Hönig, and Dieter Bimberg	
2.1 Introduction	57
2.1.1 Role of Lattice Symmetries (Zinc Blende vs Wurtzite)	58
2.2 Method of Calculation	60
2.2.1 Calculation of Strain	62
2.2.2 Piezoelectricity/Pyroelectricity	62
2.2.3 Eight-Band k-p Method: Single Particle States	65

2.2.4	Impact of Strain on Bulk Band Structure.....	66
2.2.5	Energies of Interacting Particles.....	70
2.3	Discussion of Selected Topics.....	71
2.3.1	Zb(001) Versus zb(111) Substrate Orientation.....	71
2.3.2	Type-I Versus Type-II Confinement.....	74
2.3.3	GaN/AlN Wurtzite Quantum Dots.....	76
2.4	Conclusion.....	80
	References.....	81
3	Symmetries in Multiband Hamiltonians for Semiconductor Quantum Dots	87
	Stanko Tomić and Nenad Vukmirović	
3.1	Introduction.....	88
3.2	Multiband Envelope Function Method.....	89
3.3	The Effect of Interfaces.....	91
3.4	Symmetry of the Interface Hamiltonian.....	93
3.5	The 14-Band $\mathbf{k}\cdot\mathbf{p}$ Hamiltonian.....	95
3.6	Symmetry of the 14-Band $\mathbf{k}\cdot\mathbf{p}$ Hamiltonian.....	99
3.6.1	Symmetry of the 8-Band $\mathbf{k}\cdot\mathbf{p}$ Hamiltonian.....	99
3.6.2	Symmetry of the Whole 14-Band Hamiltonian.....	101
3.7	Plane Wave Representation.....	105
3.8	Removal of Artificial Translational Symmetry Effects in Plane Wave Calculations.....	107
3.9	Symmetries of Single Particle States in Quantum Dots.....	113
3.10	Symmetries of Exciton States in Quantum Dots.....	118
3.11	Conclusion.....	120
	Appendix.....	121
	References.....	122

Part II Numerical Methods

4	Finite Elements for $\mathbf{k}\cdot\mathbf{p}$ Multiband Envelope Equations	129
	Ratko G. Veprek and Sebastian Steiger	
4.1	Introduction.....	129
4.2	Basic Principles of Finite Elements.....	131
4.3	Nanostructure $\mathbf{k}\cdot\mathbf{p}$ Equations and Operator Ordering.....	134
4.3.1	$\mathbf{k}\cdot\mathbf{p}$ Equations in Nanostructures.....	134
4.3.2	Operator Ordering.....	135
4.3.3	Zincblende Models.....	137
4.3.4	Wurtzite Models.....	138
4.4	FEM Discretization and Solution of the $\mathbf{k}\cdot\mathbf{p}$ Equations.....	138
4.4.1	Weak Form.....	138
4.4.2	Numerical Discretization.....	139
4.4.3	Solving the Generalized Eigenvalue Problem.....	141

4.5	Spurious Solutions and Equation Ellipticity	141
4.5.1	Examples of Spurious Solutions	141
4.5.2	Ellipticity Criteria	145
4.6	Strain and Polarization	150
4.7	Conclusion	152
	References	153
5	Plane-Wave Approaches to the Electronic Structure of Semiconductor Nanostructures	155
	Eoin P. O'Reilly, Oliver Marquardt, Stefan Schulz, and Aleksey D. Andreev	
5.1	Plane-Wave Approaches to Real-Space Problems	155
5.2	Plane-Wave Based Formulation of Elastic and Electronic Properties	158
5.2.1	Semi-Analytical Plane-Wave Approaches	159
5.2.2	Numerical Plane-Wave Approaches	166
5.3	Strain Distribution in a Plane-Wave Formulation	170
5.3.1	Analytical Approach	170
5.3.2	Numerical Approach	172
5.4	The Polarisation Potential in a Plane-Wave Framework	174
5.5	Advantages and Disadvantages of a Plane-Wave Representation ...	176
5.6	Plane-Wave Approach for (111)-Oriented Zincblende Dots	179
5.6.1	Rotated 8-Band k · p Formalism	179
5.6.2	Electronic Structure of (111)-Oriented Site-Controlled Zincblende Quantum Dots	183
5.6.3	Discussion of Boundary Conditions and Plane-Wave Resolution	184
5.7	Conclusion	186
	References	187
 Part III Applications		
6	The Multi-Band k·p Hamiltonian for Heterostructures: Parameters and Applications	193
	Stefan Birner	
6.1	The 8-Band k · p Hamiltonian for Bulk Materials	194
6.2	Applications	218
6.2.1	Spurious Solutions	218
6.2.2	Spin-Orbit Coupling in Silicon Quantum Dots	221
6.2.3	Type-III Broken-Gap Band Alignment: HgTe–CdTe Quantum Well	224
6.2.4	Type-II Broken-Gap Band Alignment: InAs–GaSb Superlattice	225

6.2.5	Valence Band Structure of Diamond	231
6.2.6	Self-Consistent Calculations: Influence of Substrate Orientations on the Density of a Two-Dimensional Hole Gas in Diamond.....	236
	References	241

Part IV Advanced Mathematical Topics

7	Transient Simulation of \mathbf{k}-\mathbf{p}-Schrödinger Systems Using Discrete Transparent Boundary Conditions.....	247
	Andrea Zisowsky, Anton Arnold, Matthias Ehrhardt, and Thomas Koprucki	
7.1	Introduction	248
7.2	Transient \mathbf{k} - \mathbf{p} -Schrödinger Systems.....	249
7.3	The Transparent Boundary Conditions	254
7.4	The Discrete Transparent Boundary Conditions	256
7.5	The Sum-of-Exponentials Approach and the Fast Evaluation of the Convolution	264
7.6	Numerical Results	266
7.7	Conclusion	270
	References	270
8	Discrete Transparent Boundary Conditions for Multi-Band Effective Mass Approximations	273
	Dirk Klindworth, Matthias Ehrhardt, and Thomas Koprucki	
8.1	Introduction	274
8.2	Single-Band Effective Mass Approximations: The Scalar Schrödinger Equation	275
8.2.1	The Exterior Problem and the Quantum Mechanical Dispersion Relation.....	275
8.2.2	Transparent Boundary Conditions.....	276
8.2.3	The Standard Discretization	278
8.2.4	Discretization of the Transparent Boundary Conditions.....	280
8.2.5	Discrete Transparent Boundary Conditions	282
8.2.6	Alternative Finite Difference Schemes	283
8.2.7	Numerical Example: The Single Barrier Potential.....	291
8.3	The General \mathbf{k} - \mathbf{p} -Model	295
8.3.1	The Exterior Problem and the Dispersion Relation.....	296
8.3.2	Transparent Boundary Conditions	299
8.3.3	The Discretization	303
8.3.4	Discrete Transparent Boundary Conditions	305
8.3.5	Numerical Examples	308
8.4	Conclusion	314
	Appendix	315
