

Contents

1	Introduction	1
1.1	Star Formation in the Local and Distant Universe	4
1.1.1	Atomic and Molecular Hydrogen in Galaxies	7
1.2	Observations of Outflows in Galaxies	8
1.3	Towards a Physical Model of the Interstellar Medium, Star Formation and Supernova Feedback	9
1.4	Thesis Outline	12
	References	12
2	The Galaxy Formation Model	21
2.1	Introduction	21
2.2	Formation and Growth of Dark Matter Structures	23
2.2.1	The Halo Mass Function	24
2.2.2	Halo Merger Trees	24
2.2.3	Halo Properties	25
2.3	Gas Cooling in Halos	26
2.4	Star Formation, Chemical Enrichment and Supernova Feedback	27
2.4.1	The Original Star Formation Laws in GALFORM	28
2.4.2	The Efficiency of Stellar Feedback	29
2.4.3	Recycled Fraction and Yield	30
2.5	Other Sources of Feedback	31
2.5.1	Photoionisation Heating of the IGM	31
2.5.2	AGN Feedback	31
2.6	Galaxy Mergers and Disk Instabilities	32
2.6.1	Galaxy Mergers	32
2.6.2	Disk Instabilities	33
2.7	Galaxy Sizes	34
2.8	The Spectral Energy Distribution of Galaxies	34
2.8.1	Emission of Light	35
2.8.2	Dust Extinction	35
2.9	Main Differences Between the Baugh et al. (2005) and Bower et al. (2006) Models	36
	References	37

3 On the Impact of Empirical and Theoretical Star Formation

Laws on Galaxy Formation	39
3.1 Introduction	39
3.2 Modelling the Star Formation Activity in Galaxies	41
3.2.1 The Galaxy Formation Model.	42
3.2.2 Remarks on the Original Star Formation Laws in GALFORM	42
3.2.3 The New Star Formation Laws	42
3.3 The Evolution of the SFR Density.	46
3.4 Cold Gas Mass Content of Galaxies	49
3.4.1 Cold Gas Mass Function	49
3.4.2 Global Cold Gas Density Evolution	52
3.4.3 Gas-to-Luminosity Ratios of Galaxies	52
3.5 The Evolution of Galaxies in the SFR Versus Stellar Mass Plane	53
3.5.1 The Local Star Formation Rate-Stellar Mass Plane	55
3.5.2 Comparison with Observations of the SFR- $M_{\star}$ Plane at $z = 0$	60
3.5.3 The SFR- $M_{\star}$ Relation at High Redshift.	64
3.6 Discussion and Conclusions	64
References	67

4 Cosmic Evolution of the Atomic and Molecular Gas Content of Galaxies and Scaling Relations

4.1 Introduction	71
4.2 Modelling the Two-Phase Cold Gas in Galaxies	73
4.2.1 Dark Matter Halo Merger Trees	74
4.2.2 Galaxy Formation Models	74
4.2.3 The Interstellar Medium and Star Formation in Galaxies.	75
4.2.4 Consistent Calculation or Postprocessing?	78
4.3 Scaling Relations for the Atomic and Molecular Contents of Galaxies in the Local Universe	79
4.3.1 The Dependence of H_2/HI on Galaxy Mass	79
4.3.2 The Dependence of H_2/HI on Galaxy Morphology	81
4.3.3 The Relation Between HI , H_2 and Stellar Mass	83
4.4 Atomic and Molecular Hydrogen Mass Functions	85
4.4.1 Atomic Hydrogen Mass Function	85
4.4.2 Molecular Hydrogen Mass Function	89
4.5 Evolution of Scaling Relations of the H_2 to HI Ratio	97
4.6 Cosmic Evolution of the Atomic and Molecular Gas Densities	102
4.7 Summary and Conclusions	106
References	108

5	Predictions for the CO Emission of Galaxies from a Coupled Simulation of Galaxy Formation and Photon Dominated Regions	113
5.1	Introduction	113
5.2	Modelling the CO Emission of Galaxies.	116
5.2.1	The Galaxy Formation Model.	116
5.2.2	The UCL_PDR Code	122
5.2.3	Coupling the GALFORM and UCL_PDR Codes	127
5.2.4	The Dependence of the CO–H ₂ Conversion Factor on Galaxy Properties in GALFORM	127
5.3	The CO(1-0) Emission of Galaxies in the Local Universe	129
5.3.1	The CO(1-0) Luminosity Function	129
5.3.2	The CO-to-Infrared Luminosity Ratio	131
5.4	The CO Emission of Galaxies in Multiple Transitions	132
5.4.1	The Luminosity Function of Multiple CO Lines	132
5.4.2	The CO-to-IR Luminosity Ratio and the CO SLED	137
5.5	Assessing the Robustness of the Model Predictions	146
5.6	Predictive Power of the GALFORM + UCL_PDR Model	150
5.6.1	BzK Galaxies	150
5.6.2	Lyman-Break Galaxies	154
5.7	Discussion and Conclusions	159
