1	Introduction	1
1.1	Understanding the Heart	1
1.2	Cardiac Modelling	2
1.3	Existing 3D Atrial and Torso Model	3
1.4	Overview of Thesis	5
	References	6
2	Background	9
2.1	The Heart and the Circulatory System	9
2.1.1	Gross Anatomy of the Heart	9
2.1.2	Blood Flow Through the Heart	11
2.1.3	Detailed Anatomy of the Atria	12
2.1.4	The Cardiac Conduction System and the Heartbeat	13
2.2	The Cardiac Myocyte	14
2.3	Cardiac Electrophysiology	15
2.3.1	The Cell Membrane	15
2.3.2	Sarcolemmal Ion Channel Currents	18
2.3.3	The Cardiac Action Potential	19
2.3.4	The Sarcoplasmic Reticulum, the CICR Cycle and the Ca^{2+} Transient	20
2.3.5	Pacemaking Mechanisms	21
2.3.6	Characterising Action Potentials	23
2.3.7	Action Potential Propagation	24
2.3.8	Action Potential Memory, Restitution and Re-entry	25
2.4	Experimental Techniques	26
2.4.1	Voltage Clamp	27
2.4.2	Imaging Techniques	28
2.5	The ElectroCardioGram	30
2.5.1	The ECG Waveform	30
2.5.2	Analysing ECGs	31
2.5.3	The 12-Lead ECG	32

2.6	Autonomic Regulation of the Heart	33
2.7	Cardiac Arrhythmias and Diseases	34
2.7.1	Bradycardia	34
2.7.2	Tachycardia	34
2.7.3	Fibrillation	35
2.7.4	Ischemia	35
2.7.5	Genetic Mutation Induced Cardiac Arrhythmias.	35
2.8	Mathematical Electrophysiology	35
2.8.1	Electric Circuit Model	36
2.8.2	Nernst Equilibrium Potential	38
2.8.3	Hodgkin Huxley Type Formulations.	38
2.8.4	Markov Chain Models	41
2.8.5	AP Propagation	42
2.9	Numerical Methods	43
2.9.1	Explicit Euler Method	43
2.9.2	Finite Difference Method	44
2.10	Human Atrial Myocyte Models	45
2.10.1	AP Morphology	46
2.10.2	Calcium Transients.	46
2.10.3	APD Restitution.	47
2.10.4	Stability	47
2.10.5	AF-Induced Electrical Remodelling	48
2.10.6	Comparison with Experimental Data	48
2.10.7	Models for Regional Differences in the Atria	49
2.10.8	Conclusions.	50

Part I Single Cell Modelling of the Human Atria

3	Development of a New Model for Simulating the Electrical Action Potentials of Human Atrial Myocytes.	59
3.1	Introduction and Aims	59
3.2	Methods	60
3.2.1	Voltage Clamp Protocols	60
3.2.2	Cell Model	61
3.2.3	Inclusion of the New Formulations for I_{to} and I_{Kur}	62
3.2.4	Formulations of the Funny Current I_f , and the T-type Calcium Current, I_{CaT}	64
3.2.5	Development of a New Calcium Handling System.	66
3.3	Results	72
3.3.1	Action Potential Characteristics	72
3.3.2	Comparison of AP and Current Characteristics with the CRN Model	73

3.3.3	Comparison with Experimental Data	74
3.3.4	Role of the New Sarcolemmal Ion Currents (I_{to} and I_{Kur})	75
3.3.5	Calcium Handling System	77
3.4	Comparison with Previous Models	79
3.5	Summary	82
	References	82
4	Development of a Family of Regional Cell Models	87
4.1	Introduction and Aims	87
4.1.1	A Note on Variability	88
4.2	Methods	89
4.2.1	Pectinate Muscle	89
4.2.2	Crista Terminalis and Atrio-Ventricular Ring	90
4.2.3	Right Atrial Appendage	90
4.2.4	Atrial Septum	91
4.2.5	Bachmann's Bundle	93
4.2.6	Left Atrium	93
4.2.7	Left Atrial Appendage	95
4.2.8	Pulmonary Vein	95
4.2.9	Sino-Atrial Node—Centre (SAN C) and Periphery (SAN P)	95
4.2.10	Atrio-Ventricular Node	97
4.3	Results	98
4.3.1	AP Characteristics	98
4.3.2	Relative Pacing Rates	101
4.3.3	Comparison with Available Experimental Data	102
4.3.4	Comparison with Previous Models	107
4.3.5	Role of Individual Ion Channel Currents in Pacemaking	108
4.3.6	APD Heterogeneities in the Atrial Working Myocardium	110
4.4	Summary	111
	References	112
5	Autonomic Regulation and Pathophysiological Remodelling	115
5.1	Introduction and Aims	115
5.1.1	Aims	115
5.1.2	Isoprenaline	115
5.1.3	Acetylcholine	116
5.1.4	Electrical Remodelling Associated with Atrial Fibrillation	117
5.2	Methods	118
5.2.1	Model of Isoprenaline	118

5.2.2	Model of Acetylcholine	123
5.2.3	Electrophysiological Remodelling Associated with Atrial Fibrillation	125
5.3	Results	128
5.3.1	Effect of Isoprenaline on Non-pacemaker Cell Models.	128
5.3.2	Effects of Isoprenaline on Pacemaker Cell Models. . . .	133
5.3.3	Effects of Acetylcholine on Non-pacemaker Cell Models.	136
5.3.4	Effect of Acetylcholine on Pacemaker Cell Models . . .	137
5.3.5	Effect of ISO and ACh Combined on Non-pacemaker Cell Models.	139
5.3.6	Electrophysiological Effects of AF-Remodelling on the Human Atrial AP.	140
5.4	Summary	149
5.4.1	Isoprenaline.	150
5.4.2	Acetylcholine	150
5.4.3	AF-Induced Remodelling	151
	References	151

Part II 3-D Modelling of the Human Atria

6	3D Anatomical Modelling of the Atria	159
6.1	Introduction and Aims	159
6.2	Methods	160
6.2.1	Incorporation of an Anatomically Detailed SAN	160
6.2.2	Segmentation of the Pulmonary Veins	164
6.2.3	Segmentation of the Atrial Septum.	165
6.2.4	Segmentation of the Atrio-Ventricular Ring	165
6.2.5	Segmentation of the SAN Conduction Block Zone. . . .	166
6.2.6	Incorporation of the AVN.	166
6.2.7	Simulation Methods and Protocol.	168
6.3	Results	169
6.3.1	Fully Segmented Atria	169
6.3.2	Atrial Depolarisation During Sinus Rhythm	169
6.3.3	SAN Activation.	172
6.3.4	AVN Activation.	172
6.3.5	Atrial Repolarisation	173
6.3.6	P-Waves and Body Surface Potential Patterns	175
6.3.7	Validation of Normal Atrial Conduction.	177
6.3.8	Effect of Heterogeneity and Anisotropy on Conduction and the P-Wave	179
6.3.9	Effect of Inclusion of SAN and Block Zone	181

6.4	Summary	182
	References	183
7	Pacemaking and Autonomic Regulation in the 3D Sinoatrial Node and Atria	185
7.1	Introduction and Aims	185
7.2	Methods	185
7.2.1	Autonomic Regulation, the SAN and Atrial Activation	185
7.2.2	Investigating Shifts in the Leading Pacemaker Site	186
7.2.3	AV-Nodal Pacing	186
7.2.4	AVN Re-entrant Tachycardia	187
7.3	Results	187
7.3.1	Autonomic Regulation in the 3D Atria	187
7.3.2	Leading Pacemaker Site Shifts	191
7.3.3	AV-Nodal Pacing	194
7.3.4	Characterising the Leading Pacemaker Site with the 12-Lead ECG	194
7.3.5	AVN Re-entrant Tachycardia	197
7.4	Summary	198
	References	198
8	Atrial Fibrillation	201
8.1	Introduction and Aims	201
8.1.1	Vulnerability of Different Regions	201
8.1.2	Mechanisms of Initiation and Sustenance of AF	202
8.1.3	Remodelling Associated with Atrial Fibrillation	202
8.1.4	Potential Drug Targets	202
8.2	Methods	203
8.2.1	Measurement of the Vulnerability Windows for Unidirectional Conduction Block	203
8.2.2	Initiation Protocols in 3D	204
8.2.3	The Roles of Electrical Heterogeneity and Fibre Anisotropy in AF	205
8.2.4	The Effect of I_{Kur} Block and Increased Diffusion on the Behaviour of AF	205
8.2.5	Analysis of the Frequency of Electrical Excitation	205
8.3	Results	206
8.3.1	Vulnerability Windows	206
8.3.2	Initiation and Breakdown of AF in the 3D Atrial Model	207
8.3.3	Body Surface Potentials and ECG P-Waves During AF	210
8.3.4	The Effect of Heterogeneity and Anisotropy	212

8.3.5	The Effect of AF-Induced Electrical Remodelling in the 3D Atrial Model	217
8.3.6	The Effect of I_{Kur} Block on the Behaviour of AF	220
8.3.7	The Effect of Increasing the Diffusion Coefficient Within a Simulation in Which AF has been Induced . . .	222
8.4	Summary	222
8.4.1	Initiation of Re-entrant Circuits	222
8.4.2	Long Term Behaviour of Re-entrant Circuits.	223
8.4.3	Can I_{Kur} Block Alone Terminate AF?.	224
