

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Non-Equilibrium Steady States</b>	<b>5</b>
2.1	Historical Notes: The Central Role of the Fluctuations	6
2.1.1	The Origin of the Langevin Equation: Noise and Friction	7
2.2	General Aspects of Non-Equilibrium Steady States	10
2.2.1	The Linear Response Relations	10
2.2.2	A Measure of Non-Equilibrium: The Entropy Production	16
2.2.3	Entropy Production and the Arrow of Time	19
2.2.4	The Ratchet Effect: A Pure Non-Equilibrium Phenomena	21
2.3	An Example of Out of Equilibrium Systems: The Granular Gases	23
2.3.1	A Model of a Granular Gas with Thermostat	24
2.3.2	Response Analysis	26
2.3.3	Entropy Production in Granular Gases: A Challenge	28
2.3.4	Some Remarks	29
	References	30
<b>3</b>	<b>The Effects of Memory on Linear Response and Entropy Production</b>	<b>35</b>
3.1	Entropy Production in Langevin Processes	36
3.1.1	The Fluctuation Relation and the Border Terms	37
3.1.2	Irreversible Effects of Memory	40
3.2	The Linear Model and Physical Interpretations	42
3.2.1	Steady State Properties	44
3.2.2	The Response Analysis	45
3.2.3	Entropy Production	46
3.3	Entropy Production and Information	48
3.3.1	Auxiliary Variables Versus Effective Temperatures	49
3.3.2	From the Non-Markovian to the Markovian Mode	54

3.3.3	Consequences of Projections . . . . .	56
3.4	The Linear Channel for Energy Exchange . . . . .	58
	References . . . . .	60
<b>4</b>	<b>The Motion of a Tracer in a Granular Gas. . . . .</b>	<b>63</b>
4.1	Diffusion of the Intruder in the Dilute Limit. . . . .	64
4.1.1	Model . . . . .	64
4.1.2	The Boltzmann Equation for the Tracer. . . . .	64
4.1.3	The Kramers Moyal Expansion. . . . .	66
4.1.4	The Motion of the Tracer as an Equilibrium-Like Process . . . . .	69
4.2	The Dense Case and the Effect of the Recollisions: A Numerical Study . . . . .	70
4.2.1	The Response Analysis and the Average Velocity Field. . . . .	73
4.2.2	Numerical Verification of the Gallavotti-Cohen Theorem . . . . .	74
	References . . . . .	75
<b>5</b>	<b>Anomalous Transport and Non-Equilibrium . . . . .</b>	<b>77</b>
5.1	The Problem of Anomalous Diffusion . . . . .	78
5.2	The Random Walk on a Comb Lattice. . . . .	80
5.2.1	Response Properties . . . . .	82
5.3	The Single File Model . . . . .	87
5.3.1	Equation of Motion and the Harmonization Procedure. . .	89
5.3.2	The Response Relation . . . . .	92
5.4	Ratchet Effects in Disordered Systems. . . . .	96
5.4.1	Description of the Model . . . . .	97
5.4.2	The Role of Activated Processes: The Sinai Model. . . .	99
5.4.3	The Two Temperature Scenario . . . . .	102
	References . . . . .	103
<b>6</b>	<b>Conclusions and Perspectives . . . . .</b>	<b>107</b>
	Reference . . . . .	109
	<b>Appendix . . . . .</b>	<b>111</b>
	<b>Biography of the Author . . . . .</b>	<b>125</b>

Transport Properties in Non-Equilibrium and Anomalous  
Systems

Villamaina, D.

2014, XII, 125 p. 31 illus., 17 illus. in color., Hardcover

ISBN: 978-3-319-01771-6
