

Contents

1	Introduction to the Topological Insulators and State of the Art . . .	1
1.1	Introduction	1
1.2	The Birth and Rise of a New Quantum State of Condensed Matter	6
1.2.1	The 2D Electron Gas.	7
1.2.2	The Quantum Hall Effect.	9
1.2.3	The Shubnikov de Haas Oscillations	10
1.2.4	Why Topological?.	13
1.2.5	The Edge State and the Dirac Fermions.	15
1.2.6	The Spin-Orbit Coupling and the Spin Quantum Hall Effect	19
1.2.7	From Two to Three Dimensions	22
1.3	The Second Generation of the Strong 3D TIs and their Detection	24
1.3.1	Crystal Structure and Chemical Composition	24
1.3.2	Transport Properties	29
1.3.3	Photoemission Data.	34
1.3.4	Optical Properties: Previous Results of Bi_2Se_3	40
	References	45
2	Experimental Technique, Sample Fabrication and Models for Data Analysis	47
2.1	Fourier Transform Infrared Spectroscopy	47
2.1.1	Coherent Synchrotron Radiation at BESSY	49
2.2	Experimental Apparatus	52
2.2.1	BOMEM DA-3 Interferometer	52
2.2.2	Closed-Cycle Cryostat	55
2.2.3	Infrared Experimental Station at BESSY II: Bruker IFS 66v/S Interferometer.	57
2.2.4	Liquid-Helium Cryostat and Pumped Bolometer.	58
2.3	Reflectivity Measurements	60
2.3.1	Measuring the Reference: the Overfilling Technique.	61
2.3.2	Kramers–Kronig Transformations	62
2.3.3	Optical Conductivity and Sum Rules.	64

2.4	Transmittance Measurements	66
2.4.1	Local Procedure for the Extraction of the Conductance	66
2.4.2	Surface Plasmon Polariton	67
2.5	Sample Preparation	74
2.5.1	Crystal Growth	74
2.5.2	Film Deposition	76
2.5.3	Patterning the Thin Films for Plasmonic Studies.	77
2.5.4	Electron Beam Lithography	78
2.5.5	Reactive Ion Etching	80
2.6	Data Analysis and Fitting Models	81
2.6.1	The Drude–Lorentz Model	81
2.6.2	Fano Model for the Optical Conductivity	83
2.6.3	Fano Resonance in the Extinction Coefficient	85
	References	89
3	Results and Analysis	91
3.1	Spectra of the Crystalline Topological Insulators.	92
3.1.1	Reflectivity	93
3.1.2	Optical Conductivity	93
3.1.3	Extrinsic Contributions to the Optical Conductivity.	96
3.1.4	Phonons Structure and Fano Analysis	100
3.2	Spectra of the Thin Films of Topological Insulators	102
3.2.1	Transmittance and Conductance	103
3.2.2	Optical Conductivity	105
3.3	Spectral Weight in Thin Films and Crystals	106
3.4	Surface Plasmon Polaritons in Patterned Topological Insulator Thin Films	109
3.4.1	Extinction Coefficient	109
3.4.2	Fano Resonances in Plasmonic Absorption in TIs.	112
3.4.3	Plasmonic Dispersion	115
3.5	Conclusions	117
	References	118

Optical Properties of Bismuth-Based Topological
Insulators

Di Pietro, P.

2014, X, 119 p. 78 illus., 36 illus. in color., Hardcover

ISBN: 978-3-319-01990-1
