

Contents

1	Introduction	1
1.1	Nanotechnology	1
1.2	Nanoelectronics	3
1.3	Nanofabrication by Means of a “Dual Beam” System	3
1.3.1	General Description of a “Dual Beam” System	3
1.3.2	Focused Ion Beam Milling	6
1.3.3	Focused Electron/Ion Beam Induced Etching	7
1.3.4	Focused Electron Beam Induced Deposition	8
1.3.5	Focused Ion Beam Induced Deposition	11
1.3.6	Comparison of FEBID and FIBID Techniques	13
1.3.7	Comparison of FEBID/FIBID and Electron Beam Lithography	13
1.4	Nanostructures Studied in This Thesis	14
1.5	Magnetic Nanostructures	14
1.5.1	Introduction to Spintronics	14
1.5.2	Properties of Magnetic Nanostructures	14
1.6	Superconducting Nanostructures	19
1.6.1	Introduction to Superconductivity	19
1.6.2	Vortex Dynamics	21
1.6.3	Nonlocal Vortices Dynamics	23
1.7	Objectives and Structure of This Thesis	24
	References	26
2	Experimental Techniques	31
2.1	Nanolithography by “Dual Beam”	31
2.1.1	Description of a “Dual Beam”	31
2.1.2	SEM	33
2.1.3	FIB	33
2.1.4	Gas Injection System and Precursor Materials	33
2.2	Micro-Hotplate	35
2.3	Energy Dispersive X-ray Spectroscopy	37

2.4	Structural and Compositional Characterization at the Nanoscale	38
2.4.1	TEM Sample Preparation by “Dual Beam”	38
2.4.2	Transmission Electron Microscopy	41
2.4.3	Scanning Transmission Electron Microscopy	42
2.4.4	Electron Energy Loss Spectroscopy	42
2.5	Ex Situ Electric Transport Characterization	42
	References	43
3	Ferromagnetic Cobalt Nanostructures Grown by Focused Electron Beam Induced Deposition	45
3.1	Introduction	45
3.2	Growth of Cobalt Nanostructures by FEBID	46
3.3	Microstructure and Composition of Cobalt Nanodeposits at the Nanoscale	48
3.4	Influence of the Substrate Temperature on the Nanostructure Composition: Co Pillars Grown at Low Current	54
3.5	Autocatalytic Growth of Cobalt Using Dicobalt Octacarbonyl	59
3.6	Ultrannarrow Cobalt Nanostructures and Applications	62
3.6.1	Influence of the Precursor Gas Flow	62
3.6.2	Ultrannarrow Cobalt Nanostructures	64
3.6.3	Cobalt Nano–Hall Effect Sensors	65
3.7	Conclusions	68
	References	68
4	Ferromagnetic Iron Nanostructures Grown by Focused Electron Beam Induced Deposition	71
4.1	Introduction	71
4.2	Growth of Iron Microstructures by FEBID	72
4.3	Microstructure of Iron Deposits at the Nanoscale	75
4.4	Electric Transport Mechanism	77
4.5	Magnetic Properties	79
4.5.1	Magneto-Optic Kerr Effect and Longitudinal Magnetoresistance	79
4.5.2	Dependence of the Perpendicular MR on Temperature	83
4.5.3	Study of the Giant Hall Effect	86
4.6	Conclusions	91
	References	92

5 Superconducting Tungsten-Based Nanodeposits Grown by Focused Ion Beam Induced Deposition	95
5.1 Introduction	95
5.1.1 Tungsten Deposits Grown by FIBID	95
5.1.2 Superconductivity in Tungsten Deposits Grown by FIBID.	96
5.1.3 Superconducting Properties of Tungsten Films Grown by FIBID at the Nanoscale.	98
5.2 Tungsten Structures Grown by FIBID	100
5.3 Microstructure of Tungsten Nanodeposits	103
5.4 Influence of the FIB Incidence Angle	103
5.5 Local Electric Transport in Superconducting W-Based Deposits	108
5.5.1 Superconducting W-Based Microwires	108
5.5.2 Superconducting W-Based Nanowires	109
5.5.3 Superconducting W-Based Ultranarrow Nanowires	114
5.5.4 Summary and Conclusions	120
5.6 Nonlocal Electric Transport in Superconducting W-Based Deposits	121
5.6.1 Electrical Measurement Geometry.	123
5.6.2 Bias Current Dependence of the Nonlocal Voltage	123
5.6.3 Applied Magnetic Field Dependence of the Nonlocal Resistance.	125
5.7 Conclusions and Outlook	128
References	129
6 Summary and Main Conclusions	133
References	135
Appendix A: Platinum Nanostructures Grown by Focused Electron/Ion Beam Induced Deposition	137

Functional Nanostructures Fabricated by Focused
Electron/Ion Beam Induced Deposition
