

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Optimal Regularity Results	4
1.2	Optimal Strong Error Estimates	5
1.3	A New Approach to Weak Convergence	7
1.4	Outline	9
<b>2</b>	<b>Stochastic Evolution Equations in Hilbert Spaces</b>	11
2.1	Hilbert Space-Valued Wiener Processes	11
2.2	The Hilbert Space-Valued Stochastic Itô-Integral	15
2.3	Mild Solutions to Semilinear Stochastic Evolution Equations	19
2.4	Existence and Uniqueness of Mild Solutions	26
2.5	Optimal Spatial Regularity	33
2.6	Temporal Regularity	40
2.7	Some Generalizations	49
<b>3</b>	<b>Optimal Strong Error Estimates for Galerkin Finite Element Methods</b>	51
3.1	Preliminaries	51
3.2	A Brief Introduction to Galerkin Finite Element Methods	54
3.3	Sharp Estimates for Deterministic Problems: The Semidiscrete Case	57
3.4	Spatially Semidiscrete Approximation of the Stochastic Equation	60
3.5	Sharp Estimates for Deterministic Problems: The Fully Discrete Case	66
3.6	Spatio-Temporal Approximations of the Stochastic Equation	78
<b>4</b>	<b>A Short Review of the Malliavin Calculus in Hilbert Spaces</b>	85
4.1	The Derivative Operator	85
4.2	The Divergence Operator	99
4.3	A Short Proof of the Stochastic Fubini Theorem	105

<b>5</b>	<b>A Malliavin Calculus Approach to Weak Convergence</b> .....	109
5.1	Preliminaries .....	109
5.2	Assumptions .....	111
5.3	A Useful Representation Formula of the Weak Error .....	115
5.4	The Weak Error for the Linear Inhomogeneous Heat Equation .....	119
5.5	Some Generalizations .....	126
<b>6</b>	<b>Numerical Experiments</b> .....	129
6.1	General Setting .....	129
6.2	Stochastic Heat Equation with Additive Noise .....	133
6.3	Inhomogeneous Stochastic Heat Equation .....	142
6.4	Geometric Brownian Motion in Infinite Dimensions .....	146
6.5	Inhomogeneous Geometric Brownian Motion in Infinite Dimensions .....	149
<b>A</b>	<b>Some Useful Variations of Gronwall's Lemma</b> .....	155
<b>B</b>	<b>Results on Semigroups and Their Infinitesimal Generators</b> .....	159
B.1	Strongly Continuous Semigroups of Bounded Operators .....	159
B.2	Fractional Powers of $A$ and the Spaces $\dot{H}^s$ .....	161
<b>C</b>	<b>A Generalized Version of Lebesgue's Theorem</b> .....	169
	<b>References</b> .....	171
	<b>Index</b> .....	175

Strong and Weak Approximation of Semilinear  
Stochastic Evolution Equations

Kruse, R.

2014, XIV, 177 p. 4 illus., Softcover

ISBN: 978-3-319-02230-7
