Contents

Part I Models of the Insect Brain: From Neurobiology to Computational Intelligence

1 Neurobiological Models of the Central Complex and the Mushroom Bodies 3
R. Strauss

2 A Computational Model for the Insect Brain 43
P. Arena, L. Patanè and P. S. Termini

Part II Complex Dynamics for Internal Representation and Locomotion Control

3 Compact Internal Representation of Dynamic Environments: Simple Memory Structures for Complex Situations 83
J. A. Villacorta-Atienza, M. G. Velarde and V. A. Makarov

4 CPG for Motor Control 101
E. Arena, P. Arena and L. Patanè

5 A Prototype 2N-Legged (insect-like) Robot. A Non-Linear Dynamical System Approach 123
E. del Rio and M. G. Velarde

Part III Software/Hardware Cognitive Architectures

6 A Robotic Simulation Framework for Cognitive Systems 153
P. Arena, L. Patanè and A. Vitanza

7 Robotic Platforms 177
I. Aleo, P. Arena, S. De Fiore, L. Patanè, M. Pollino and C. Ventura

8 Compact Internal Representation of Dynamic Environments: Implementation on FPGA 217
L. Salas-Paracuellos and L. Alba-Soto

9 Visual Routines for Cognitive Systems on the Eye-RIS Platform 249
D. J. Caballero-Garcia and A. Jimenez-Marrufo

Part IV Scenarios and Experiments

10 Experimental Scenarios 319
P. Arena and L. Patanè

11 Robotic Experiments and Comparisons 331
P. Arena, S. De Fiore, L. Patanè, P. S. Termini and A. Vitanza

http://www.springer.com/978-3-319-02361-8

Spatial Temporal Patterns for Action-Oriented Perception in Roving Robots II
An Insect Brain Computational Model
Arena, P.; Patanè, L. (Eds.)
2014, XIV, 371 p. 256 illus., 205 illus. in color.,
Hardcover
ISBN: 978-3-319-02361-8
