

Contents

Part I Introductory Remarks and State of the Art	
1 Introduction to Advances in Autonomic Nervous System Dynamics for Mood and Emotional-State Recognition	3
2 Emotions and Mood States: Modeling, Elicitation, and Classification	9
2.1 Modeling Emotions	9
2.2 Autonomic Nervous System Correlates of Emotions	11
2.2.1 Heart Rate Variability	12
2.2.2 The Electrodermal Response	12
2.2.3 Information Coming from the Eyes: Pupil Size Variation and Eye Tracking	13
2.2.4 Cardio-Respiratory Coupling	15
2.3 Emotion Elicitation	16
2.4 Affective Computing: From Theory to Emotion Recognition	17
2.5 Emotions and Mood Disorders: The Bipolar Disorders	17
2.6 Autonomic Nervous System as a Nonlinear Physiological System	21
Part II Methodology	
3 Data Acquisition: Experimental Procedures and Wearable Monitoring Systems	25
3.1 Procedures on Healthy Subjects	25
3.1.1 Recruitment of Eligible Subjects	26
3.1.2 Stimulus Elicitation	26
3.2 Procedures on Bipolar Patients	28
3.2.1 Recruitment of Eligible Subjects and Experimental Protocols	30
3.2.2 The Mood Model	32
3.3 Portable and Novel Wearable Systems for Autonomic Nervous System Monitoring	33
3.3.1 The Glove System	33

3.3.2	The PSYCHE System	38
3.3.3	HATCAM—Wearable Eye Gaze Tracking System	39
3.3.4	BIOPAC: Set of Physiological Signals and Instrumentation	43
4	Advanced Signal Processing and Modeling for ANS Data	45
4.1	Overall Methodology	46
4.2	Preprocessing	48
4.2.1	Movement Artifact Removal	48
4.2.2	Electrocardiogram and Heart Rate Variability	48
4.2.3	Respiration	49
4.2.4	Electrodermal Response	50
4.3	Feature Sets	51
4.3.1	Standard Feature Set	52
4.3.2	Features from Higher Order Spectra	54
4.3.3	Pupillometry and Gaze Point	57
4.3.4	Nonlinear Methods for Feature Extraction	63
4.3.5	Cardio-Respiratory Synchronization Analysis	68
4.4	Feature Reduction Strategy	70
4.4.1	Principal Component Analysis	70
4.5	Classification	71
4.5.1	Quadratic Discriminant Classifier	71
4.5.2	k -Nearest Neighborhood	73
4.5.3	Multi-layer Perceptron	73
4.5.4	Support Vector Machine	73
4.6	Point-Process Theory and the Instantaneous Nonlinear Dynamics	74
4.6.1	Point-Process Nonlinear Model of the Heartbeat	77
4.6.2	Estimation of the Input–Output Volterra Kernels	79
4.6.3	Quantitative Tools: High Order Spectral Analysis	80

Part III Results

5	Experimental Evidences on Healthy Subjects and Bipolar Patients	85
5.1	Results from the Healthy Subjects Study	86
5.1.1	Effective Arousal and Valence Levels Recognition Through Autonomic Nervous System Dynamics	86
5.1.2	Approximate Entropy and Dominant Lyapunov Exponent Analysis on Heart Rate Variability	88
5.1.3	Cardio-Respiratory Synchronization Analysis	90
5.1.4	Using Cardio-Respiratory Synchronization Information for Emotion Recognition	92
5.1.5	Instantaneous Bispectral Characterization of the Autonomic Nervous System Through Point-Process Nonlinear Models	94
5.1.6	Instantaneous Emotional Assessment Through Nonlinear Point-Process Models	95
5.1.7	Electrodermal Response Analysis and Sensorized Glove Assessment	99

5.1.8	Eye Tracking and Pupil Area Variation	101
5.2	Modeling the Cardio-Respiratory Coupling During Arousing Elicitation	104
5.3	Results from the Study on Bipolar Patients	106
5.3.1	Long-Term Analysis	107
5.3.2	Long-Term Analysis: The Role of History-Dependence .	111
5.3.3	Long-Term Analysis: The Role of Nonlinear Heartbeat Dynamics Through Multiscale Entropy Analysis	115
5.3.4	Short-Term Analysis	116
Part IV Conclusions and Future Works		
6	Conclusions and Discussion on Mood and Emotional-State Recognition Using the Autonomic Nervous System Dynamics . . .	127
7	Book Summary and Perspectives for Future Research	139
	References	145
	Index	161

Autonomic Nervous System Dynamics for Mood and
Emotional-State Recognition

Significant Advances in Data Acquisition, Signal
Processing and Classification

Valenza, G.; Scilingo, E.P.

2014, XIX, 162 p. 49 illus., 36 illus. in color., Hardcover

ISBN: 978-3-319-02638-1
