Part I Foundation

1	Model elliptic problems	3
1.1	A brief history of the mimetic finite difference method	6
1.2	Other compatible discretization methods	14
1.3	Principles of mimetic discretizations	18
1.4	Scalar elliptic problems	24
1.4.1	Diffusion equation in primal form	24
1.4.2	Diffusion equation in mixed form	25
1.4.3	Advection-diffusion equation in mixed form	26
1.5	Vector elliptic problems	27
1.5.1	Stokes problem	27
1.5.2	Linear elasticity problem	28
1.5.3	Reissner-Mindlin plate bending problem	31
1.5.4	Magnetostatics problem	32
1.6	Polyhedral meshes	33
1.6.1	Mesh shape regularity	34
1.6.2	Consequences of the mesh regularity assumptions	36
1.7	Polygonal meshes	39
2	Foundations of mimetic finite difference method	41
2.1	Degrees of freedom and discrete fields	43
2.2	Discrete spaces and projection operators	45
2.3	Primary mimetic operators	47
2.3.1	The discrete gradient operator $\nabla_h : \mathcal{V}_h \rightarrow \mathcal{E}_h$	47
2.3.2	The discrete curl operator $\text{curl}_h : \mathcal{E}_h \rightarrow \mathcal{F}_h$	48
2.3.3	The discrete divergence operator $\text{div}_h : \mathcal{F}_h \rightarrow \mathcal{P}_h$	48
2.3.4	Discrete versions of the Stokes theorem	49
2.3.5	Basic properties of the primary operators	50
2.3.6	Matrix representation of the primary operators	52

2.4	Derived mimetic operators	53
2.5	Second-order discrete operators	55
2.6	Exact identities	57
2.6.1	The kernel of the primary operators	58
2.6.2	The kernel of the derived operators	59
2.6.3	The kernel of the second-order mimetic operators	61
2.7	Discrete Helmholtz decomposition theorems	64
3	Mimetic inner products and reconstruction operators	67
3.1	Mimetic inner product	67
3.2	Properties of the reconstruction operators	71
3.3	Minimal reconstruction operators	73
3.3.1	The reconstruction operators R_v^γ , R_e^ϵ , $R_f^\mathcal{F}$ and $R_P^\mathcal{P}$	74
3.3.2	The reconstruction operators R_e^γ , R_f^ϵ and $R_P^\mathcal{F}$	74
3.3.3	The reconstruction operators R_f^γ and R_P^ϵ	79
3.3.4	The reconstruction operator R_P^γ	83
3.4	Mimetic inner products for a single cell	84
3.4.1	Mimetic inner product in $\mathcal{V}_{h,P}$	86
3.4.2	Mimetic inner product in $\mathcal{E}_{h,P}$	86
3.4.3	Mimetic inner product in $\mathcal{F}_{h,P}$	88
3.4.4	Mimetic inner product in $\mathcal{P}_{h,P}$	88
3.4.5	Formula for the inner product matrix	88
4	Mimetic discretization of bilinear forms	91
4.1	Discrete bilinear forms	92
4.1.1	Consistency condition	94
4.1.2	Stability condition	96
4.2	Algebraic form of the consistency condition	97
4.3	Formula for matrix M_P	99
4.4	Stability analysis	103
4.4.1	Stability result in the natural norm	103
4.4.2	Stability result in the mesh-dependent norm	108
4.5	Construction of stabilization matrix M_P^1	111
4.6	The inverse of matrix M_P	113

Part II Mimetic Discretization of Basic PDEs

5	The diffusion problem in mixed form	117
5.1	Mimetic discretization	118
5.1.1	Degrees of freedom and projection operators	118
5.1.2	Strong and weak forms of the discrete equations	119
5.1.3	Stability and consistency conditions	121
5.1.4	A family of mimetic schemes	123
5.2	Convergence analysis and error estimates	128
5.2.1	Preliminary lemmas	129

5.2.2	Stability analysis	130
5.2.3	Convergence of the vector variable	132
5.2.4	Convergence of the scalar variable	133
5.3	Exact reconstruction operators	136
5.3.1	Existence of exact reconstruction operators	138
5.3.2	Superconvergence of the scalar variable	140
5.4	A posteriori estimates	142
5.4.1	Post-processing of the scalar variable	143
5.4.2	A residual-based a posteriori estimator	143
5.5	Second-order approximation of the flux	146
5.5.1	Derivation of the mimetic scheme	147
5.5.2	Convergence analysis	151
5.5.3	Solution post-processing	154
6	The diffusion problem in primal form	155
6.1	Overview of the method	155
6.1.1	Discretization of the strong form of the equations	156
6.1.2	Discretization of the weak formulation	158
6.2	Low-order mimetic method	159
6.2.1	Degrees of freedom	159
6.2.2	The consistency and stability conditions	160
6.2.3	Discretization of linear functional \mathcal{L}_h	162
6.2.4	Convergence theorem	163
6.2.5	Derivation of bilinear form \mathcal{A}_h	163
6.2.6	A family of mimetic schemes	166
6.3	Arbitrary-order mimetic method	170
6.3.1	Degrees of freedom	172
6.3.2	The consistency and stability conditions	174
6.3.3	Discretization of linear functional \mathcal{L}_h	176
6.3.4	Derivation of bilinear form \mathcal{A}_h	177
6.4	Convergence analysis	179
6.4.1	Reconstruction operator	179
6.4.2	Stability of the projection operator	183
6.4.3	Proof of the convergence theorem	185
6.4.4	L^2 -estimate of the approximation error	188
6.5	A posteriori estimates	189
6.5.1	Mesh refinement and related results	189
6.5.2	A consistent coarse-grid problem	192
6.5.3	A posteriori error analysis	192
6.5.4	An inexpensive error indicator	194
7	Maxwell's equations	197
7.1	Maxwell's equations	197
7.2	Mimetic discretizations	198
7.2.1	Degrees of freedom and projection operators	198

7.2.2	Strong form of discrete equations	200
7.2.3	Divergence constraints and energy conservation	202
7.2.4	Stability and consistency conditions	204
7.2.5	A family of mimetic schemes	208
7.3	Magnetostatics equations	210
7.3.1	Strong and weak forms of discrete equations	211
7.3.2	Stability and consistency conditions	214
7.3.3	Convergence analysis	215
8	The Stokes problem	221
8.1	The mimetic formulation	222
8.1.1	Degrees of freedom and projection operators	222
8.1.2	Mimetic operators, inner products and bilinear forms	225
8.1.3	Discrete strong and weak formulations	226
8.1.4	Stability and consistency conditions	228
8.1.5	Formula for the stiffness matrix	230
8.2	Convergence analysis and error estimates	233
8.2.1	Preliminaries and technical lemmas	233
8.2.2	Stability analysis	234
8.2.3	Error estimates	241
8.3	Reduced edge bubbles formulation	247
8.3.1	The modified mimetic discretization	248
8.3.2	Stability of the modified scheme	249
8.3.3	A macroelement technique	250
8.3.4	Sufficient conditions for the stability	252
8.4	Existence of the reconstruction operator	256
8.4.1	Construction of the scalar reconstruction operator	256
8.4.2	Construction of the vector reconstruction operator	258
 Part III Further Developments		
9	Elasticity and plates	263
9.1	Displacement-pressure formulation of linear elasticity	263
9.2	Stress-displacement formulation of linear elasticity	265
9.2.1	Assumptions on mesh and data	266
9.2.2	Degrees of freedom and projection operators	267
9.2.3	Discrete mimetic operators	268
9.2.4	Weak form of discrete equations	270
9.2.5	Practical construction of the scalar product	272
9.2.6	Stability and convergence analysis	274
9.3	Reissner-Mindlin plates	276
9.3.1	Assumptions on mesh and data	277
9.3.2	Degrees of freedom and projection operators	277
9.3.3	Discrete operators and norms	279
9.3.4	Mimetic inner products and bilinear forms	280

9.3.5	Weak form of discrete equations	283
9.3.6	A priori error estimates	283
9.4	Implementation of the method	284
9.4.1	Stiffness matrix for the bilinear form $a_{h,P}$	285
9.4.2	Stiffness matrix for the shear energy term	286
10	Other linear and nonlinear mimetic schemes	289
10.1	Advection-diffusion equation	289
10.1.1	Discretization of the advective term	290
10.1.2	An alternative hybrid discretization of the advection term	295
10.1.3	Convergence analysis	296
10.1.4	Shock-capturing behavior	298
10.2	Obstacle problem	302
10.2.1	The problem formulation	302
10.2.2	A mimetic discretization	302
10.2.3	Convergence of the method	304
10.2.4	Numerical test	309
11	Analysis of parameters and maximum principles	311
11.1	Hybridization techniques	312
11.1.1	The mixed-hybrid mimetic formulation	313
11.1.2	Convergence analysis for Lagrange multipliers	314
11.2	Monotonicity conditions for the mixed-hybrid formulation	317
11.2.1	Triangular and tetrahedral cells	320
11.2.2	Parallelograms	320
11.2.3	Oblique parallelepipeds	324
11.2.4	AMR cells	328
11.3	Monotonicity conditions for the nodal formulation	331
11.3.1	Geometric notation for a quadrilateral cell	331
11.3.2	Sufficient monotonicity conditions on quadrilaterals cells	332
11.4	Non-linear optimization	334
12	Diffusion problem on generalized polyhedral meshes	339
12.1	Diffusion problem in mixed form	340
12.2	Polyhedral meshes with curved faces	341
12.3	Mimetic discretization	346
12.3.1	Degrees of freedom and projection operators	346
12.3.2	Strong and weak forms of discrete equations	349
12.3.3	Stability and consistency conditions	350
12.3.4	Derivation of mimetic inner product	352
12.4	Convergence analysis and error estimates	358
12.4.1	Stability analysis	358
12.4.2	Convergence of the vector variable	361
12.4.3	Convergence of the scalar variable	364
12.5	Exact reconstruction operators	365

12.5.1 Existence of the exact reconstruction operator	365
12.5.2 Superlinear convergence of the scalar variable	367
