

Contents

1	Introduction	1
Part I Background		
2	Set Theoretic Methods in Control	7
2.1	Set Terminology	7
2.2	Convex Sets	7
2.2.1	Basic Definitions	7
2.2.2	Ellipsoidal Set	8
2.2.3	Polyhedral Set	10
2.3	Set Invariance Theory	16
2.3.1	Problem Formulation	16
2.3.2	Basic Definitions	17
2.3.3	Ellipsoidal Invariant Sets	18
2.3.4	Polyhedral Invariant Sets	21
2.4	On the Domain of Attraction	27
2.4.1	Problem Formulation	28
2.4.2	Saturation Nonlinearity Modeling—A Linear Differential Inclusion Approach	29
2.4.3	The Ellipsoidal Set Approach	31
2.4.4	The Polyhedral Set Approach	37
3	Optimal and Constrained Control—An Overview	43
3.1	Dynamic Programming	43
3.2	Pontryagin’s Maximum Principle	44
3.3	Model Predictive Control	45
3.3.1	Implicit Model Predictive Control	46
3.3.2	Recursive Feasibility and Stability	50
3.3.3	Explicit Model Predictive Control—Parameterized Vertices	51
3.4	Vertex Control	56

Part II Interpolating Control

4	Interpolating Control—Nominal State Feedback Case	67
4.1	Problem Formulation	67
4.2	Interpolating Control via Linear Programming—Implicit Solution	67
4.3	Interpolating Control via Linear Programming—Explicit Solution	73
4.3.1	Geometrical Interpretation	73
4.3.2	Analysis in \mathbb{R}^2	76
4.3.3	Explicit Solution	79
4.3.4	Qualitative Analysis	82
4.4	Improved Interpolating Control	86
4.5	Interpolating Control via Quadratic Programming	92
4.6	Interpolating Control Based on Saturated Controllers	101
4.7	Convex Hull of Ellipsoids	108
5	Interpolating Control—Robust State Feedback Case	115
5.1	Problem Formulation	115
5.2	Interpolating Control via Linear Programming	116
5.3	Interpolating Control via Quadratic Programming	127
5.4	Interpolating Control Based on Saturated Controllers	133
5.5	Interpolation via Quadratic Programming for Uncertain Systems with Disturbances	140
5.5.1	Input to State Stability	141
5.5.2	Cost Function Determination	143
5.5.3	Interpolating Control via Quadratic Programming	147
5.6	Convex Hull of Invariant Ellipsoids for Uncertain, Time-Varying Systems	151
6	Interpolating Control—Output Feedback Case	159
6.1	Problem Formulation	159
6.2	Output Feedback—Nominal Case	160
6.3	Output Feedback—Robust Case	165

Part III Applications

7	High-Order Examples	173
7.1	Implicit Interpolating Control for High Order Systems	173
7.2	Explicit Interpolating Controller for High Order Systems	176
8	A Benchmark Problem: The Non-isothermal Continuous Stirred Tank Reactor	181
8.1	Continuous Stirred Tank Reactor Model	181
8.2	Controller Design	183
	References	189
	Index	195

Constrained Control of Uncertain, Time-Varying,
Discrete-Time Systems

An Interpolation-Based Approach
