

Acknowledgments

The book originated from Marcia's PhD dissertation (Deregulation of the Brazilian Sugarcane Production Chain, 1999). David Zilberman was fortunate to meet Marcia in his visit to Brazil in 2011. After several conversations about the origin of Proalcool, the role of the military government, and the deep state intervention existing on the sugarcane sector at that time, they decided to update the analysis of the Brazilian experience in sugarcane ethanol. In particular, the analysis is focused on the deregulation process, which occurred from the late 1990s, the challenges faced by the stakeholders in a free market environment and the new rules and changes since 2000. The book also brings a comprehensive assessment of the international interest in alternatives to oil, in the new environmental and social agendas and financial constraints, and ultimately how the authors see the future of biofuels in Brazil.

Marcia would like to thank the Fundação de Amparo à Pesquisa do Estado de São Paulo - FAPESP for supporting the translation of the book, as well as the infrastructure support from the Luiz de Queiroz College of Agriculture (ESALQ), of University of São Paulo.

David would like to thank the Energy Bioscience Institute (EBI) for partial support, Scott Kaplan for excellent assistance both in terms of content and editing, and Madhu Khanna for useful discussion.

Production of Ethanol from Sugarcane in Brazil

From State Intervention to a Free Market
