

Contents

1	Introduction	1
1.1	Planar Bi-Sobolev Mappings	3
1.2	Mappings of Bounded and Finite Distortion	14
2	Continuity	17
2.1	Counterexamples and Idea of the Proof	17
2.2	Distributional Jacobian	22
2.3	Weakly Monotone Mappings	31
2.4	Oscillation Estimates and Continuity	32
2.5	Differentiability Almost Everywhere	37
3	Openness and Discreteness	41
3.1	Motivation and Ball's Counterexamples	41
3.2	Topological Degree	43
3.3	Topological Degree for Sobolev Mappings	48
3.4	Proof of Openness and Discreteness	52
3.5	Local Multiplicity of Mappings of Finite Distortion	57
4	Images and Preimages of Null Sets	63
4.1	Lusin (N) Condition in Sobolev Spaces	63
4.2	Lusin (N) Condition for MFD	67
4.3	Counterexamples for MFD	69
4.4	Lusin (N^{-1}) Condition	73
5	Homeomorphisms of Finite Distortion	81
5.1	Regularity of the Inverse	81
5.2	Regularity of the Composition	91
5.3	Sharp Moduli of Continuity for f and f^{-1}	96
5.4	Jacobian Cannot Change Sign	102
5.5	Approximation of Sobolev Homeomorphisms	104

6	Integrability of J_f and $1/J_f$	107
6.1	Regularity of the Jacobian under $\exp(\lambda K) \in L^1$	107
6.2	Integrability of $1/J_f$	113
6.3	Application to Removable Singularities	115
7	Final Comments	123
7.1	Inner Distortion	123
7.2	Ball's Question from the Introduction	125
7.3	Beltrami Equations	127
7.4	Shape of the Image of a Disk	131
7.5	Compactness	133
	Appendix	139
A.1	Simple Linear Algebra	139
A.2	Covering Theorems	139
A.3	L^p -Spaces	140
A.4	Maximal Operator	144
A.5	Sobolev Spaces	148
A.6	Lipschitz Approximation of Sobolev Functions	155
A.7	Differentiability and Approximative Differentiability	158
A.8	Area and Coarea Formula	163
A.9	Estimates for q -Capacity	165
A.10	Solvability of $\Delta u = \varphi$	167
	References	169
	Index	175

Lectures on Mappings of Finite Distortion

Hencl, S.; Koskela, P.

2014, XI, 176 p. 4 illus., Softcover

ISBN: 978-3-319-03172-9
