

Contents

1	Overrings and PM-Spectra	1
1	A Look at Overrings and Their Polars	2
2	Families of Modules and Overrings with Finite Avoidance	7
3	The PM-Spectrum as a Partially Ordered Set	11
4	Prüfer Extensions with Finite Avoidance	17
5	PM-Split Extensions	24
6	Irreducible and Coirreducible Overrings	30
7	Completely Reducible Prüfer Extensions	38
8	Connectedness in the Restricted PM-Spectrum	45
9	Integral Extensions	50
2	Approximation Theorems	59
1	Coarsening of Valuations	60
2	Dependent Families of Manis Valuations	65
3	The Inverse Property	69
4	Essential Valuations	79
5	The Approximation Theorem in the Neighbourhood of Zero	89
6	The General Approximation Theorem	100
7	The Reinforced Approximation Theorem	108
3	Kronecker Extensions and Star Operations	123
1	Kronecker Subrings of $R(X)$, Their Use for Special Valuations	126
2	\mathcal{G} -Special Valuations and the Ring $R(X, \mathcal{G})$	131
3	Star Operations: Definitions and Some Examples	138
4	The Star Product and the Star Sum; Star Modules and Fractional Ideals	146
5	The Condition e.a.b.	152
6	Star Operations of Finite Type	157
7	Partial Star Operations, the Kronecker Operations	159
8	Star Regular Valuations	164
9	A Generalization: Weak Stars and Semistars	169
10	Upper Stars	174

Appendix: Errata Volume I	179
References	181
Subject Index	183
Symbol Index	187
