<b>1</b>	<b>The Standard Model of Particle Physics</b>	<b>1</b>
1.1	Historical Approach	1
1.2	Quarks, Leptons and Gauge Bosons	4
1.3	The Higgs Mechanism	6
1.4	Z and Higgs Boson Production in Proton Collisions	10
1.4.1	Z Boson Production in Proton Collisions	11
1.4.2	Higgs Boson Production in Proton Collisions	12
1.5	The Tau Lepton	14
	References	14
<b>2</b>	<b>Supersymmetry and the MSSM</b>	<b>17</b>
2.1	The Minimal Supersymmetric Standard Model	19
2.2	The Higgs Sector in the MSSM	19
2.3	MSSM Higgs Production in Proton Collisions	21
	References	22
<b>3</b>	<b>Experimental Setup</b>	<b>23</b>
3.1	The Large Hadron Collider	23
3.1.1	Performance Goals and Constraints	23
3.1.2	Layout and Operation	26
3.1.3	Operating Conditions in 2011 Run	28
3.2	The Compact Muon Solenoid Experiment	29
3.2.1	Coordinate System	29
3.2.2	Magnet	30
3.2.3	Inner Tracking System	31
3.2.4	Electromagnetic Calorimeter	34
3.2.5	Hadron Calorimeter	36
3.2.6	Muon System	37
3.2.7	Trigger	41
	References	45

<b>4</b>	<b>Event Simulation</b>	47
4.1	Physics Event Generation	47
4.1.1	Hard Scattering Process	47
4.1.2	Parton Shower, Underlying Event and Hadronization	48
4.1.3	MC Generator Programs	49
4.1.4	K-factors	51
4.2	Detector Simulation	51
4.2.1	Simulation of Multiple Interactions	52
4.3	Simulated Samples	52
	References	54
<b>5</b>	<b>Event Reconstruction</b>	55
5.1	Track and Vertex Reconstruction	55
5.1.1	Track Reconstruction	55
5.1.2	Iterative Tracking	56
5.1.3	Vertex Reconstruction	56
5.2	Electron Reconstruction and Identification	57
5.2.1	ECAL Seeded Reconstruction	57
5.2.2	Track Seeded Reconstruction	58
5.2.3	Rejection of Electrons from Converted Photons	59
5.2.4	Electron Identification	59
5.2.5	Electron Trigger	60
5.3	Muon Reconstruction and Identification	60
5.3.1	Standalone Muon Reconstruction	60
5.3.2	Global Muon Reconstruction	61
5.3.3	Tracker Muon Reconstruction	61
5.3.4	Muon Identification	62
5.3.5	Muon Trigger	62
5.4	Particle Flow Reconstruction	63
5.4.1	Calorimeter Clustering	64
5.4.2	Link Algorithm	64
5.4.3	Particle Reconstruction	65
5.5	Lepton Isolation	66
5.5.1	Isolation Optimization at Higher Luminosities	68
5.6	Jet and Missing Transverse Energy Reconstruction	70
5.6.1	Jet Reconstruction	70
5.6.2	Jet Energy Corrections	71
5.6.3	Missing $E_T$ Reconstruction	73
5.7	Identification of Jets Originating by $b$ Quarks	73
5.7.1	The Track Counting Algorithm	74
	References	75

<b>6</b>	<b>Hadronic Tau Identification and Trigger</b>	77
6.1	Decay Mode Based Reconstruction	77
6.2	The HPS Tau Identification Algorithm	78
6.2.1	Reconstruction of $\pi^0$ Sub-Clusters	79
6.2.2	Combination of Charged Hadrons and Strips	79
6.2.3	Hadronic Tau Isolation	81
6.3	Discrimination Against Electrons and Muons	82
6.3.1	Muon Rejection	82
6.3.2	Electron Rejection	83
6.4	Performance of Tau Identification	83
6.4.1	Tau Performance in Simulation	84
6.4.2	Measurement of the Tau Fake Rate	85
6.5	Trigger for di-tau Final States	87
6.5.1	High Level Trigger Algorithm	87
6.5.2	Performance	89
	References	89
<b>7</b>	<b>Selection of Tau Pairs</b>	91
7.1	Data Samples and Triggers	91
7.2	Object Selection	93
7.3	Topological Requirements	93
7.4	Corrections to the Simulation	97
7.4.1	Pileup Corrections	98
7.4.2	Electron and Muon Efficiency Corrections	98
7.4.3	Tau Efficiency Corrections	100
7.4.4	Missing $E_T$ Calibration	102
7.4.5	Corrections to the Topological Requirements	104
7.5	Background Estimation in $e + \tau_h$ and $\mu + \tau_h$ Final States	105
7.5.1	QCD Multijet	105
7.5.2	$W$ +Jets	107
7.5.3	$Z \rightarrow \ell\ell$ +Jets	107
7.5.4	Top Pairs, di-bosons and $\gamma$ +Jets	108
7.5.5	Background Estimation Method	108
7.6	Background Estimation for the $e + \mu$ Final State	110
7.7	Results	112

Heavy Neutral Particle Decays to Tau Pairs  
Detected with CMS in Proton Collisions at  $\sqrt{s} =$   
7TeV

Bachtis, M.

2014, XVI, 152 p. 72 illus., 11 illus. in color., Hardcover

ISBN: 978-3-319-03256-6
