Preface ix

Nomenclature xxi

Introduction xxix

Continuum Fields 1

1. Kinematics 5

1.1 Motion 6

1.1.1 Homogeneous Motions 7

1.2 Velocity and Acceleration 8

1.3 Examples 9

1.3.1 Uniaxial Extension 10

1.3.2 Equi-biaxial Extension 11

1.3.3 Simple Shear 12

1.3.4 Homogeneous Planar Membranes 14

1.4 Exercises 17

1.4.1 Pure Shear 18

1.4.2 Biaxial Extension 19

1.4.3 Extension Followed by Simple Shear 20

1.4.4 Other Problems 22

2. Deformation 23

2.1 Homogeneous Deformation 25

2.2 Conservation of Mass 25

2.2.1 Isochoric Deformation 26

xiii

2.3	Deformation Gradient as a Mapping Function	27
2.4	Stretch and Rotation	28
2.5	Rate Fields	30
2.5.1	Lagrangian Velocity Gradient	31
2.5.2	Isochoric Deformations	32
2.6	Numerical Implementation	32
2.6.1	Angular Velocity	33
2.6.2	Rotation	34
2.6.3	Stretch	37
2.7	Examples	38
2.7.1	Uniaxial Extension	38
2.7.2	Equi-biaxial Extension	39
2.7.3	Simple Shear	40
2.7.4	Homogeneous Planar Membranes	42
2.8	Exercises	44
2.8.1	Pure Shear	44
2.8.2	Biaxial Extension	44
2.8.3	Extension Followed by Simple Shear	45
2.8.4	Other Problems	45
3.	Strain	47
3.1	Deformation	47
3.2	Measures of Strain	49
3.2.1	Hencky Strain	51
3.2.2	Infinitesimal Strain/Rotation Relationships	52
3.3	Geometric Interpretations of Strain	53
3.3.1	An Areal Interpretation	56
3.4	Strain Rates	57
3.4.1	Integration	60
3.5	Strain and Strain-Rate Fields for Numerical Analysis	61
3.5.1	Formulation in Terms of Green Strain	61
3.5.2	Formulation in Terms of Lodge Strain	64
3.6	Examples	67
3.6.1	Uniaxial Extension	67
3.6.2	Equi-biaxial Extension	68
3.6.3	Simple Shear	69
3.6.4	Homogeneous Planar Membranes	71
3.7	Exercises	73
3.7.1	Pure Shear	73

3.7.2	Biaxial Extension	73
3.7.3	Extension Followed by Simple Shear	73
3.7.4	Other Problems	73
4.	Stress	77
4.1	Kirchhoff Stress	79
4.2	Conservation of Momenta	79
4.3	First Piola–Kirchhoff Stress	81
4.4	Second Piola–Kirchhoff Stress	83
4.5	Stress Rates	83
4.5.1	Integrate for Stress	84
4.6	The Extra Stress	85
4.7	Hill’s Constitutive Inequalities	86
4.7.1	Incompressible Materials	86
4.7.2	Eulerian Formulations	87
4.8	Stresses for Numerical Analysis	88
4.9	Examples	90
4.9.1	Uniaxial Extension	90
4.9.2	Equi-biaxial Extension	92
4.9.3	Simple Shear	95
4.9.4	Homogeneous Planar Membranes	97
4.10	Exercises	101
4.10.1	Pure Shear	101
4.10.2	Biaxial Extension	101
4.10.3	Extension Followed by Simple Shear	102
4.10.4	Other Problems	102

Constitutive Equations 105

5.	Explicit Elasticity	109
5.1	Theory	110
5.1.1	Green Elastic Solid	110
5.1.2	Lodge Elastic Solid	112
5.1.3	Properties	113
5.2	Isotropic Theory	114
5.2.1	Isotropic Green Solid	114
5.2.2	Isotropic Lodge Solid	117
5.2.3	A Property of Explicit Elastic Solids	119

5.3	A Collection of Material Models	119
5.3.1	Incompressible Green Materials	120
5.3.2	Incompressible Lodge Materials	121
5.3.3	Material Stability	121
5.3.4	Incompressible Material Models of Renown . . .	122
5.3.5	Compressible Green Materials	124
5.3.6	Compressible Lodge Materials	126
5.3.7	Compressible Material Model of Renown	127
5.4	Numerical Implementation	127
5.4.1	Incompressible Materials	128
5.4.2	Compressible Materials	131
5.5	Examples	135
5.5.1	Uniaxial Extension	136
5.5.2	Equi-biaxial Extension	139
5.5.3	Simple Shear	142
5.5.4	Homogeneous Planar Membranes	145
5.6	Applications	146
5.6.1	Guidelines for Selecting an Elastic Material Model	149
5.7	Exercises	150
5.7.1	Pure Shear	150
5.7.2	Biaxial Extension	150
5.7.3	Extension Followed by Simple Shear	151
5.7.4	Other Problems	151
6.	Implicit Elasticity	161
6.1	Motivation	162
6.1.1	Attempts at Capturing Fung's Law Using Explicit Elasticity	165
6.2	Theory	167
6.2.1	Dilatoric/Deviatoric Formulation	170
6.3	Modulus and Compliance	171
6.3.1	Incompressible Materials	173
6.3.2	Compressible Materials	174
6.3.3	Eulerian Formulations	175
6.3.4	Stability	177
6.3.5	Plane-Stress Formulation	177
6.4	Isotropic Materials	179
6.4.1	Implicit Hookean Solid	179

6.5	Rajagopal Elastic Solids	183
6.5.1	Material A	184
6.5.2	Material B	186
6.5.3	Material C	189
6.6	Examples	190
6.6.1	Uniaxial Extension	190
6.6.2	Equi-biaxial Extension	192
6.6.3	Simple Shear	194
6.6.4	Homogeneous Planar Membranes	196
6.7	Applications	197
6.8	Exercises	199
6.8.1	Pure Shear	199
6.8.2	Biaxial	199
6.8.3	Extension Followed by Simple Shear	199
6.8.4	Other Problems	199
7.	Viscoelasticity	209
7.1	1D Viscoelastic Solid	210
7.1.1	Clocks	212
7.1.2	Stress Relaxation Experiment	212
7.1.3	Causal Deformations	214
7.1.4	Memory Kernel Formulation	215
7.1.5	Additive Strain Formulation	216
7.1.6	Quasi-Linear Viscoelasticity	218
7.2	Viscoelastic Kernels	220
7.2.1	IOV Kernel	221
7.2.2	FOV Kernel	222
7.2.3	BOX Kernel	229
7.2.4	Implementing a Physical Kernel: The MCM Kernel	230
7.3	Additive Strain Fields	234
7.3.1	Lagrangian Strains	235
7.3.2	Eulerian Strains	236
7.3.3	Field Transfer	237
7.4	K-BKZ Viscoelasticity	238
7.4.1	Viscoelastic Lodge Solid	239
7.4.2	Viscoelastic Green Solid	241
7.4.3	Viscoelastic Mooney–Rivlin Solid	242

7.5	Quasi-Linear Viscoelasticity	243
7.5.1	Guth Strains for Explicit Elastic Solids	245
7.5.2	Guth Strains for Implicit Elastic Solids	246
7.5.3	Bulk/Shear Split	246
7.5.4	Tangent Moduli	249
7.6	Examples	251
7.6.1	Uniaxial Extension	252
7.6.2	Equi-biaxial Extension	253
7.6.3	Simple Shear	254
7.6.4	Planar Membranes	255
7.7	Applications	256
7.7.1	Selecting a Kernel	256
7.7.2	Selecting a Constitutive Equation	264
7.8	Exercises	265
7.8.1	Pure Shear	265
7.8.2	Biaxial Extension	265
7.8.3	Extension Followed by Simple Shear	266
7.8.4	Other Problems	266
Appendix A Linear Algebra		277
A.1	Arrays and Vectors	277
A.2	Matrices and Tensors	279
Appendix B Covariant and Contravariant Issues:		
Configuration Physics		289
B.1	Invariant Observer	290
B.2	Field Transfer	292
B.3	Material Derivatives	297
B.4	Lie Derivatives	298
B.4.1	Integration	302
B.5	Weighted Field Transfer	307
Appendix C Kronecker Products		
A Tensor-to-Array Mapping Scheme		309
C.1	The vec Operator	310
C.2	Kronecker Product	311
C.3	The ten Operator	312
C.4	Coordinate Transformations	314

Appendix D	Solver for a First-Order ODE	317
D.1	Estimate Error	319
D.2	IRKS Methods	320
Appendix E	Solver for Convolution Integrals	329
Appendix F	Solver for the Mittag–Leffler Function	341
<i>Bibliography</i>		343
<i>Index</i>		357

Soft Solids

A Primer to the Theoretical Mechanics of Materials

Freed, A.

2014, XXXVI, 364 p. 57 illus., 3 illus. in color., Hardcover

ISBN: 978-3-319-03550-5

A product of Birkhäuser Basel
