Part I Theory

1 Applications of Functional Analysis to Partial Differential Equations	3
1.1 Basic Issues in the Mathematical Analysis of Partial Differential Equations	3
1.1.1 The Standard Problem	3
1.1.2 Implications of the Mathematical Analysis	5
1.1.3 Strong and Weak Formulations	5
1.2 Banach Spaces	7
1.2.1 Examples of Banach Spaces	9
1.2.2 Properties of Banach Spaces	13
1.2.3 Continuous Linear and Bilinear Maps	13
1.3 Hilbert Spaces	15
1.3.1 The Scalar Product and Its Properties	15
1.3.2 Definition and Properties of a Hilbert Space	16
1.3.3 Convex Subsets of a Hilbert Space	17
1.4 Basics of Distribution Theory	19
1.4.1 Motivation: Intuitive Definition of the Weak Derivative	19
1.4.2 Characterizing a Vector in a Finite-Dimensional Vector Space	20
1.4.3 Extension to Functions and Introduction of Regular Distributions	23
1.4.4 Definition of Distributions	29
1.4.5 Differentiation of Distributions	31
1.5 Sobolev Spaces	34
1.5.1 The Space $L^2(\Omega)$	35
1.5.2 The Space $H^1(\Omega)$	37
1.5.3 The Space $H_0^1(\Omega)$	45
1.5.4 The Space $H^2(\Omega)$	51
1.6 Fundamental Theorems for the Functional Analysis of PDEs	54
References	61

2	Finite-Element Method	63
2.1	Basic Idea	63
2.1.1	Mathematical Modeling	63
2.1.2	Formalism and Functional Framework for Partial Differential Equations	64
2.1.3	Constructing a Variational Formulation	66
2.2	Existence, Uniqueness, and Regularity of a Weak Solution	68
2.2.1	Application to the Homogeneous Laplace–Dirichlet Problem	68
2.2.2	Application to the Inhomogeneous Laplace–Dirichlet Problem	74
2.2.3	Application to the Laplace–Neumann–Dirichlet Problem	77
2.3	Equivalence of Weak and Strong Formulations	79
2.4	Methodology and a Series of Approximations	84
2.5	Variational Formulations and Approximations	87
2.6	Convergence of the Finite-Element Method	91
2.7	Description of Commonly Used Finite-Element Methods	95
2.8	Fundamental Classes of Finite-Element Methods	96
2.8.1	Finite-Element Analysis in One Spatial Dimension	96
2.8.2	Finite-Element Methods in Two Spatial Dimensions	98
2.8.3	Finite-Element Methods in Three Spatial Dimensions	107
	References	109

Part II Worked Problems

3	Variational Formulations of Problems with Elliptical Boundary Conditions	113
3.1	Heat Transfer with Mixed Boundary Conditions	113
3.1.1	Statement of the Problem	113
3.1.2	Solution	116
3.2	Heat Conduction	127
3.2.1	Statement of the Problem	127
3.2.2	Solution	129
3.3	Incompressible Fluid	144
3.3.1	Statement of the Problem	144
3.3.2	Solution	148
	Reference	159
4	Finite-Element Methods and Standard Differential Problems	161
4.1	Dirichlet Problem	162
4.1.1	Statement of the Problem	162

4.1.2	Solution to Theoretical Part	165
4.1.3	Solution to Numerical Part	171
4.2	Neumann Problem	176
4.2.1	Statement of the Problem	176
4.2.2	Solution to Theoretical Part	179
4.2.3	Solution to Numerical Part	182
4.3	Fourier–Dirichlet Problem	189
4.3.1	Statement of the Problem	189
4.3.2	Solution to Theoretical Part	192
4.3.3	Solution to Numerical Part	197
4.4	Periodic Problem	202
4.4.1	Statement of the Problem	202
4.4.2	Solution to Theoretical Part	205
4.4.3	Solution to Numerical Part	208
	Reference	211
5	Mechanics of Deformable Solids	213
5.1	Mixed Stress–Strain Problem	213
5.1.1	Statement of the Problem	213
5.1.2	Solution	221
5.2	Clamped Plate	235
5.2.1	Statement of the Problem	235
5.2.2	Solution	240
	Reference	250
6	Strength of Materials	251
6.1	Beam in Traction	252
6.1.1	Statement of the Problem	252
6.1.2	Solution	257
6.2	Beam in Bending	271
6.2.1	Statement of the Problem	271
6.2.2	Solution	276
6.3	Doubly Clamped Beam: Euler–Bernoulli Theory	292
6.3.1	Statement of the Problem	292
6.3.2	Solution	298
	Reference	311
7	Nonlinear Problems	313
7.1	Burgers’ Equation with Viscosity	313
7.1.1	Statement of the Problem	313
7.1.2	Solution	317
7.2	Nonlinear Integrodifferential Equation	330
7.2.1	Statement of the Problem	330
7.2.2	Solution	334

7.3	Riccati Differential Equation.	343
7.3.1	Statement of the Problem.	343
7.3.2	Solution.	346
	References	353
Index	355

Mathematical and Numerical Methods for Partial
Differential Equations

Applications for Engineering Sciences

Chaskalovic, J.

2014, XIV, 358 p. 38 illus., Hardcover

ISBN: 978-3-319-03562-8
