

Contents

1	Prerequisites	1
1.1	Keplerian Elements	1
1.2	Averaging Technique	3
1.3	Kozai-Lidov Mechanism	4
1.4	Suppressed Kozai-Lidov Mechanism	8
1.5	Two-Body Relaxation	11
1.6	Central Mass Dominated Relaxation	13
1.7	Relaxation of Thin Stellar Discs	16
	References	19
2	Thin Disc Embedded in Extended Spherically Symmetric Cluster	21
2.1	The Cluster Modelled by Analytic Potential	21
2.2	Coupling of the Disc and the Cluster	23
2.2.1	Accelerated Exchange of Angular Momentum	26
2.2.2	e -Instability in the Cluster	27
2.2.3	Orbital Evolution of the Disc	32
2.2.4	e -Instability in the Disc	33
2.2.5	Interaction of the e -Structures in the Cluster and the Disc	35
2.2.6	Propagation of the e -Instability to Farther Regions	36
2.3	Basic Processes	37
2.3.1	Kozai-Lidov Dynamics in the Cluster	38
2.3.2	Formation of the e -Structure in the Cluster	42
2.3.3	Kozai-Lidov Dynamics in the Disc	42
2.3.4	Formation of the e -Structure in the Disc	46
2.4	Discussion of Model Parameters	47
	References	50

3	Dynamical Coupling of Near-Keplerian Orbits	51
3.1	Evolution of Two Circular Orbits	52
3.1.1	Integrals of Motion	56
3.1.2	Numerical Solutions	58
3.2	Generalization for Multiple Orbits	59
	References	61
4	Sagittarius A*	63
4.1	Introduction of the Numerical Model	65
4.2	Coherent Evolution of the Core of the Disc	66
4.2.1	Application of the Semi-Analytic Model	69
4.3	Discussion of the Problem	71
4.3.1	Model Parameters Compatible with Observations	71
4.3.2	Structure of the CND	74
	References	75
5	Conclusions	77
	References	79

Symmetries and Dynamics of Star Clusters

Haas, J.

2014, XVI, 79 p. 42 illus., Hardcover

ISBN: 978-3-319-03649-6
