<b>1</b>	<b>Introduction</b>	1
1.1	Motivation	1
1.2	Aerial Robots	3
1.3	Aerial Robotics and Artificial Intelligence	6
1.4	Preliminaries	9
1.4.1	Probability Fundamentals	9
1.4.2	Uncertainty Fundamentals	12
1.4.3	Nonlinear Control Fundamentals	18
1.4.4	Graph Theory Fundamentals	21
1.4.5	Linear Temporal Logic Fundamentals	24
1.4.6	Rough Sets	30
1.5	Modeling	31
1.5.1	Modeling of the Environment	37
1.5.2	Modeling of the Aerial Robot	37
1.5.3	Aerial Robots in Winds	43
1.6	Conflict Detection	46
1.6.1	Deterministic Approach	46
1.6.2	Probabilistic Approach	51
1.7	Conclusions	52
	References	53
<b>2</b>	<b>Motion Planning</b>	59
2.1	Introduction	59
2.2	Controllability	60
2.3	Trajectory Planning	64
2.3.1	Trim Trajectory Generation	66
2.3.2	Leg-Based Guidance	68
2.3.3	Dubins and Zermelo Problems	69
2.3.4	Optimal Control Based Approaches	77
2.3.5	Parametric Curves	87
2.4	Nonholonomic Motion Planning	99
2.4.1	Differential Flatness	99
2.4.2	Nilpotence	103
2.4.3	Constrained Motion Planning	106

2.4.4	Motion Planning for Highly Congested Spaces . . . . .	109
2.5	Obstacle/Collision Avoidance . . . . .	111
2.5.1	Problem Formulation . . . . .	111
2.5.2	Discrete Search Methods . . . . .	115
2.5.3	Continuous Search Methods . . . . .	139
2.6	Replanning Approaches . . . . .	148
2.6.1	Incremental Replanning . . . . .	149
2.6.2	Anytime Algorithms . . . . .	157
2.7	Conclusions . . . . .	163
	References . . . . .	164
<b>3</b>	<b>Deterministic Decision Making . . . . .</b>	<b>171</b>
3.1	Introduction . . . . .	172
3.2	Symbolic Planning . . . . .	173
3.2.1	Hybrid Automaton . . . . .	174
3.2.2	Temporal Logic Motion Planning . . . . .	180
3.3	Computational Intelligence . . . . .	181
3.3.1	Neural Networks . . . . .	182
3.3.2	Evolution Algorithms . . . . .	185
3.3.3	Decision Tables . . . . .	189
3.3.4	Fuzzy Systems . . . . .	190
3.4	Arc Routing Methods . . . . .	192
3.4.1	Traveling Salesman Problem . . . . .	193
3.4.2	Dubins Traveling Salesman Problem . . . . .	199
3.4.3	Chinese Postman Problem . . . . .	202
3.4.4	Rural Postman Problem . . . . .	203
3.5	Case Studies . . . . .	207
3.5.1	Surveillance Mission . . . . .	207
3.5.2	Evolutionary Planner . . . . .	213
3.5.3	Bridge Monitoring . . . . .	220
3.5.4	Soaring Flight for Fixed Wing Aerial Robot . . . . .	231
3.6	Conclusions . . . . .	239
	References . . . . .	240
<b>4</b>	<b>Decision Making Under Uncertainty . . . . .</b>	<b>245</b>
4.1	Introduction . . . . .	246
4.2	Generic Framework for Dynamic Decisions . . . . .	248
4.2.1	Problem Formulation . . . . .	248
4.2.2	Utility Theory . . . . .	252
4.2.3	Decision Trees and Path Utility . . . . .	252
4.2.4	Bayesian Inference and Bayes Nets . . . . .	252
4.2.5	Influence Diagrams . . . . .	255
4.3	Markov Approach . . . . .	255

4.3.1	Markov Models . . . . .	256
4.3.2	Markov Decision Process Presentation. . . . .	256
4.3.3	Partially Observable Markov Decision Process . . . . .	262
4.3.4	Bayesian Connection with Partially Observable Markov Decision Process. . . . .	264
4.3.5	Learning Processes . . . . .	265
4.3.6	Monte Carlo Value Iteration. . . . .	266
4.3.7	Markov Logic. . . . .	268
4.3.8	Belief Space Approach . . . . .	270
4.4	Stochastic Optimal Control Theory . . . . .	275
4.4.1	Bayesian Connection with State Space Models. . . . .	276
4.4.2	Learning to Control. . . . .	277
4.4.3	Chance Constrained Algorithms . . . . .	278
4.4.4	Probabilistic Traveling Salesman Problem . . . . .	280
4.4.5	Type 2 Fuzzy Logic . . . . .	283
4.5	Motion Grammar. . . . .	284
4.5.1	Description of the Approach. . . . .	286
4.5.2	Grammars for Aerial Robots . . . . .	287
4.5.3	Temporal Logic Specifications . . . . .	289
4.6	Case Studies . . . . .	292
4.6.1	Robust Orienteering Problem . . . . .	292
4.6.2	Exploration of an Uncertain Terrain . . . . .	299
4.6.3	Rescue Path Planning in Uncertain Adversarial Environment . . . . .	301
4.6.4	Receding Horizon Path Planning with Temporal Logic Constraints . . . . .	303
4.7	Real-Time Applications . . . . .	306
4.8	Conclusions . . . . .	311
	References . . . . .	312
<b>5</b>	<b>Multi Aerial Robot Planning . . . . .</b>	<b>317</b>
5.1	Introduction . . . . .	318
5.2	Team Approach. . . . .	319
5.2.1	Cooperation . . . . .	321
5.2.2	Cascade-Type Guidance Law . . . . .	323
5.2.3	Consensus Approach . . . . .	327
5.2.4	Flocking Behavior. . . . .	329
5.2.5	Connectivity and Convergence of Formations. . . . .	333
5.3	Deterministic Decision Making . . . . .	336
5.3.1	Distributed Receding Horizon Control. . . . .	338
5.3.2	Conflict Resolution . . . . .	340
5.3.3	Artificial Potential. . . . .	342
5.3.4	Symbolic Planning . . . . .	346

5.4	Association with Limited Communications . . . . .	348
5.4.1	Introduction . . . . .	348
5.4.2	Problem Formulation . . . . .	349
5.4.3	Genetic Algorithms . . . . .	353
5.4.4	Games Theory Reasoning . . . . .	355
5.5	Multi-Agent Decision Making Under Uncertainty . . . . .	356
5.5.1	Decentralized Team Decision Problem . . . . .	357
5.5.2	Algorithms for Optimal Planning . . . . .	365
5.5.3	Task Allocation: Optimal Assignment . . . . .	368
5.5.4	Distributed Chance Constrained Task Allocation . . . . .	374
5.6	Case Studies . . . . .	377
5.6.1	Reconnaissance Mission. . . . .	377
5.6.2	Expanding Grid Coverage . . . . .	381
5.6.3	Optimization of Perimeter Patrol Operations . . . . .	383
5.6.4	Stochastic Strategies for Surveillance . . . . .	388
5.7	Conclusions . . . . .	391

Planning and Decision Making for Aerial Robots

Bestaoui Sebbane, Y.

2014, XX, 406 p. 17 illus., 14 illus. in color., Hardcover

ISBN: 978-3-319-03706-6
