

Contents

1	Introduction: Some Plasma Characteristic Quantities	1
1.1	Historical Account	1
1.2	Notations	3
1.3	Heuristics for Introducing Some Plasma Characteristic Quantities	5
2	Quasi-Neutrality and Magneto-Hydrodynamics	11
2.1	Massless-Electron Approximation	11
2.1.1	The Ion–Electron Electrodynamical Model	12
2.1.2	The Ion Euler System with Massless-Electron Approximation	16
2.2	Quasi-Neutrality Approximation	24
2.2.1	Asymptotic Analysis in the Nonmagnetized Case	24
2.2.2	Asymptotic Analysis in the Magnetized Case	27
2.2.3	Proofs of the Propositions of Sects. 2.1 and 2.2	29
2.3	Two-Temperature Euler Models and Magneto-Hydrodynamics	37
2.3.1	The Two-Temperature Euler System	38
2.3.2	Electron Magneto-Hydrodynamics	47
2.4	Analysis of the Hyperbolic Part of Systems $(\mathcal{E}2T)$ and (\mathcal{MHD})	63
2.4.1	On the Galilean Transformations	65
2.4.2	Hyperbolic Properties of Both Models	66
2.4.3	Proofs of the Propositions of the Section	69
3	Laser Propagation: Coupling with Ion Acoustic Waves	73
3.1	Laser Propagation in a Plasma	75
3.1.1	On the Time Envelope Models	75
3.1.2	Geometrical Optics	91
3.1.3	The Paraxial Approximation	99
3.2	The Brillouin Instability in Laser–Plasma Interaction	111
3.2.1	The Modified Decay Model in a Homogeneous Plasma	114
3.2.2	The Standard Decay System in a Homogeneous Plasma	115

3.2.3	Model with a Nonhomogeneous Plasma	119
3.2.4	A Three-Wave Coupling System and Its Analysis	120
4	Langmuir Waves and Zakharov Equations	135
4.1	Langmuir Waves Without Coupling with Ions	136
4.1.1	Conductivity and Dispersion Relation	138
4.1.2	Linear Langmuir Wave Theory	141
4.2	Coupling of Langmuir Waves with Acoustic Waves	143
4.3	The Zakharov Equations and Their Properties	149
5	Coupling Electron Waves and Laser Waves	159
5.1	Raman Instability	160
5.1.1	Model with Fixed Ions	162
5.1.2	Reduction of the Model with Fixed Ions	169
5.1.3	The Raman Model with an Ion Acoustic Wave	179
5.2	The Euler–Maxwell Model for Short Ultra-High Intensity Laser Pulses	181
5.2.1	Well-Posedness of the Model	184
5.2.2	Boundary Conditions	190
5.3	Envelope Models for Very Short High-Intensity Laser Pulses	192
6	Models with Several Species	199
6.1	Two-Temperature Euler System for a Mixing of Two Ion Species	199
6.1.1	The Three-Population Full Model	200
6.1.2	Average-Species Models	205
6.2	Some Models for Weakly Ionized Plasmas	212
6.2.1	The Multifluid Model and the Multispecies Diffusion Model	213
6.2.2	The Ambipolar Diffusion Model	218
Appendix A		227
A.1	Tensor Analysis Formula	227
A.2	Useful Lemmas of Functional Analysis	227
Bibliography		231
Index		237

Mathematical Models and Methods for Plasma Physics,

Volume 1

Fluid Models

Sentis, R.

2014, XII, 238 p. 16 illus., 11 illus. in color., Hardcover

ISBN: 978-3-319-03803-2
