

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Goals of the Book	2
1.2	Relation to Existing Work	3
1.3	Outline	4
	References	4
<b>2</b>	<b>Spectral Dimensionality Reduction</b>	7
2.1	A General Setting for Spectral Dimensionality Reduction	7
2.2	Linear Spectral Dimensionality Reduction	9
2.2.1	Principal Components Analysis (PCA)	9
2.2.2	Classical Multidimensional Scaling (MDS)	10
2.3	Nonlinear Spectral Dimensionality Reduction	11
2.3.1	Isomap	12
2.3.2	Maximum Variance Unfolding (MVU)	13
2.3.3	Diffusion Maps	14
2.3.4	Locally Linear Embedding (LLE)	16
2.3.5	Laplacian Eigenmaps	17
2.3.6	Local Tangent Space Alignment (LTSA)	19
2.4	Kernel Formulation	20
2.5	Summary	21
	References	21
<b>3</b>	<b>Modelling the Manifold</b>	23
3.1	Overview of Neighbourhood Graph Construction	24
3.2	Building Neighbourhood Graphs	25
3.2.1	Optimised Neighbourhood Methods	26
3.2.2	Adaptive Estimation Methods	28
3.3	Topological and Multi-manifold Considerations	30
3.3.1	Manifolds with Loops	31
3.3.2	Multiple Manifolds	32
3.4	Noise and Outliers	34
3.4.1	Pre-processing Methods	35
3.4.2	Noise Handling Extensions	36

3.5	Summary . . . . .	38
	References . . . . .	38
<b>4</b>	<b>Intrinsic Dimensionality . . . . .</b>	<b>41</b>
4.1	Background . . . . .	41
4.2	Estimating Dimensionality: The Spectral Gap . . . . .	42
4.3	Estimating Dimensionality: Other Methods . . . . .	44
4.3.1	Global Estimators . . . . .	44
4.3.2	Local Estimators . . . . .	47
4.4	Choosing Techniques and Limitations . . . . .	49
4.5	Summary . . . . .	50
	References . . . . .	51
<b>5</b>	<b>Incorporating New Points. . . . .</b>	<b>53</b>
5.1	Natural Incorporation . . . . .	53
5.2	Out-of-Sample Extensions . . . . .	54
5.2.1	The Nyström Method . . . . .	55
5.2.2	Generalised . . . . .	57
5.2.3	Common Problems . . . . .	59
5.3	Pre-image . . . . .	60
5.4	Incremental Learning . . . . .	61
5.4.1	Incremental PCA . . . . .	62
5.4.2	Incremental Isomap . . . . .	62
5.4.3	Incremental LLE . . . . .	64
5.4.4	Incremental Laplacian Eigenmaps . . . . .	64
5.4.5	A Unified Framework . . . . .	65
5.5	Summary . . . . .	66
	References . . . . .	67
<b>6</b>	<b>Large Scale Data . . . . .</b>	<b>69</b>
6.1	Computational Complexity and Bottlenecks . . . . .	69
6.1.1	Complexity of Spectral Dimensionality Reduction Algorithms . . . . .	70
6.1.2	Common Bottlenecks. . . . .	73
6.2	The Nyström Method. . . . .	73
6.2.1	Sampling Methods . . . . .	74
6.3	Other Approximation Methods . . . . .	75
6.3.1	Isomap Variants . . . . .	75
6.3.2	Laplacian Eigenmap Variants . . . . .	76
6.3.3	Maximum Variance Unfolding Variants. . . . .	77
6.3.4	Diffusion Maps Variants . . . . .	77
6.4	Using Brute Force: GPU and Parallel Implementations . . . . .	78
6.5	Summary . . . . .	79
	References . . . . .	79

<b>7</b>	<b>Postscript</b>	83
7.1	Digging Deeper: How do You Measure Success?	83
7.2	Beyond Spectral Dimensionality Reduction	85
7.2.1	Manifold Learning and ANNs	85
7.2.2	Beyond Dimensionality Reduction	85
7.3	Implementations	86
7.4	Conclusions	87
7.5	Future Paths	88
7.6	Summary	88
	References	89
<b>Index</b>		91

Open Problems in Spectral Dimensionality Reduction

Strange, H.; Zwiggelaar, R.

2014, IX, 92 p. 20 illus., 15 illus. in color., Softcover

ISBN: 978-3-319-03942-8
