

Contents

1	Introduction	1
2	Users' Requirements	3
2.1	EVAs	3
2.2	The Method.	4
2.3	Space Environment	5
2.4	Spacesuits and Gloves	6
2.5	Fatigue Problems During EVAs.	8
2.6	EVA Training	9
2.7	Radiation	10
2.7.1	EVA Suit Glove Shielding	10
2.7.2	ISS Shielding	11
2.8	EMU Suit Battery	11
2.9	Safety	12
2.10	Space Market and Stakeholders	12
2.11	Kinematic and Dynamics Analysis and Considerations.	12
2.12	Requirements Table	15
	References	16
3	State of the Art	17
3.1	Actuators and Sensors	18
3.2	Control Systems.	19
3.2.1	EEGs	20
3.2.2	EMGs.	20
3.2.3	Other Solutions	21
3.3	Alternative Designs	23
3.3.1	Actuation	23
3.3.2	Feedback	25
	References	28

4	The Soft Robotics Approach.	31
4.1	Materials for Actuation and Sensing.	32
4.1.1	Ionic EAPs	34
4.1.2	Electronic EAPs	35
4.1.3	Materials Selection	37
4.1.4	Dielectric Elastomers Modeling.	47
4.2	Measure System.	49
4.2.1	Introductive Description of Body Signals: Production Process.	50
4.2.2	Description EMG.	51
4.2.3	Description MMG	53
4.2.4	Sum Up Table and Critical Considerations	56
4.2.5	Measure System Concept and Algorithm	56
4.3	Control System Architecture	58
4.3.1	Neural Network Training Protocol.	60
	References	61
5	Concept Layout	63
5.1	Actuator Design.	64
5.2	Kinematics and Dynamics Specifications	64
5.3	Structural Model of the Actuator	68
5.4	MEBA Dimensioning	72
5.5	Sensors	76
5.5.1	EMG/MMG Sensors.	76
5.6	Prototyping and Experiments.	78
5.6.1	Experiments with EMG	80
5.6.2	Experiments with MMG	82
	References	84
6	Conclusions	85
6.1	Side Applications.	86
6.2	Future Development.	88

Innovative Hand Exoskeleton Design for Extravehicular
Activities in Space

Freni, P.; Botta, E.M.; Randazzo, L.; Ariano, P.

2014, XII, 89 p. 46 illus., 2 illus. in color., Softcover

ISBN: 978-3-319-03957-2
