1	Elements of Thermodynamically Constrained Averaging Theory	1
1.1	Overview	1
1.2	Identification of Scales for Modeling	4
1.2.1	Length Scales	4
1.2.2	Time Scales	11
1.3	Thermodynamically Constrained Averaging Theory Approach	13
1.3.1	Overview	13
1.3.2	Microscale Conservation Principles	13
1.3.3	Microscale Thermodynamics	15
1.3.4	Microscale Equilibrium Conditions	16
1.3.5	Averaging Theorems	18
1.3.6	Larger-scale Conservation Principles	19
1.3.7	Larger-scale Thermodynamics	20
1.3.8	Evolution Equations	22
1.3.9	Constrained Entropy Inequality	22
1.3.10	Simplified Entropy Inequality	24
1.3.11	Closure Relations	25
1.3.12	Closed Models	26
1.3.13	Subscale Modeling and Applications	27
1.4	Summary	28
	Exercises	29
	References	29
2	Microscale Conservation Principles	37
2.1	Overview	37
2.2	General Conservation and Balance Principles	39
2.2.1	General Qualitative Formulation	39
2.2.2	General Quantitative Formulation	40
2.2.3	Species-based Quantitative Formulation	42
2.3	Conservation and Balance Principles for a Phase	44
2.3.1	General Microscale Point Forms	44

2.3.2	Specific Conservation and Balance Principles	47
2.4	Conservation and Balance Principles for an Interface	56
2.4.1	General Microscale Point Form	57
2.4.2	Specific Conservation and Balance Principles	61
2.5	Conservation and Balance Principles for a Common Curve	68
2.5.1	General Microscale Point Form	69
2.5.2	Specific Conservation and Balance Principles	73
2.6	General Multispecies Formulation for a Common Point	78
2.6.1	General Microscale Point Form	79
2.7	Summary	81
	Exercises	82
	References	84
3	Microscale Thermodynamics	87
3.1	Overview	87
3.2	Essence of Equilibrium Thermodynamics	90
3.3	Fluid-phase Equilibrium Thermodynamics	91
3.3.1	Fundamental and Differential Forms	91
3.3.2	Euler Equation for Internal Energy	96
3.3.3	Gibbs-Duhem Equation for a Fluid	97
3.4	Normalized Internal Energy Formulation	98
3.5	Other Thermodynamic Potentials	100
3.5.1	Helmholtz Free Energy	101
3.5.2	Enthalpy	103
3.5.3	Gibbs Free Energy	105
3.5.4	Comments on Energy Potentials	107
3.6	Relation between C_P and C_V	108
3.7	Solid-phase Equilibrium Thermodynamics	110
3.8	Interface and Common Curve Equilibrium Thermodynamics	114
3.8.1	Interface Thermodynamics	115
3.8.2	Common Curve Thermodynamics	117
3.9	Microscale Multiphase System Notation	118
3.10	Partial Mass Quantities	120
3.10.1	Fluid Phase	120
3.10.2	Solid Phase	122
3.10.3	Interface	123
3.10.4	Common Curve	124
3.11	Classical Irreversible Thermodynamics (CIT)	124
3.12	Other Thermodynamic Theories	128
3.12.1	Rational Thermodynamics (RT)	128
3.12.2	Extended Irreversible Thermodynamics (EIT)	129
3.12.3	Theory of Internal Variables (TIV)	129
3.13	Summary	130
	Exercises	131
	References	132

4	Microscale Equilibrium Conditions	135
4.1	Overview	135
4.2	Components of Variational Analysis	136
4.3	Variation of Microscale Quantities	137
4.3.1	Variation of Green's Strain Tensor	137
4.4	Variation of Energy Integrals	139
4.4.1	Analysis of the Integral of $\sigma_s : \bar{\delta}(\mathbf{C}_s / j_s)$	144
4.4.2	General Condition of Equilibrium	147
4.5	Single-fluid-phase Porous Medium System	148
4.5.1	Equilibrium Conditions	151
4.6	Two-fluid-phase Porous Medium System	152
4.6.1	Identification of Index Sets	153
4.6.2	Identification of Simpler Equilibrium Conditions	154
4.6.3	Equilibrium Variational Analysis	155
4.6.4	Additional Equilibrium Conditions	160
4.7	Summary	163
	Exercises	163
	References	164
5	Microscale Closure for a Fluid Phase	167
5.1	Overview	167
5.2	System Definition	169
5.3	Conservation and Thermodynamic Equations	170
5.3.1	Entropy Inequality	171
5.3.2	Conservation Equations	172
5.3.3	Thermodynamic Relations	172
5.4	Constrained Entropy Inequality	173
5.4.1	Introduction of Constraints	173
5.4.2	Selection of Lagrange Multipliers	175
5.4.3	Reduction to the CEI	178
5.5	Simplified Entropy Inequality	181
5.5.1	Introduction of Approximations	182
5.5.2	Consideration of Equilibrium Conditions	183
5.6	Closure Relations	184
5.6.1	Count of Variables	184
5.6.2	Diffusive Flux Rearrangement	186
5.7	Special Cases	186
5.7.1	Single-species Phase	187
5.7.2	Single-species, Isothermal Phase	187
5.8	Conjugate Force-flux Closure	187
5.8.1	Stress Tensor	188
5.8.2	Diffusion Vector	191
5.8.3	Non-advective Heat Flux	192
5.8.4	Chemical Reaction	193
5.9	Cross-coupled Closure	193

5.10 Summary	196
Exercises	197
References	198
6 Macroscale Conservation Principles	201
6.1 Overview	201
6.2 Averaging Conventions and Notation	203
6.2.1 Intrinsic Averages	205
6.2.2 Mass Averages	205
6.2.3 Unique Averages	206
6.2.4 Examples of Averaging Notation	206
6.3 Averaging Theorems	210
6.3.1 Averaging Theorems for Phases	211
6.3.2 Averaging Theorems for Interfaces	214
6.3.3 Averaging Theorems for Common Curves	216
6.3.4 Averaging Theorem for Common Points	217
6.4 Application of Averaging Process	217
6.5 Macroscale Principles for a Phase	218
6.5.1 Conservation of Mass	218
6.5.2 Conservation of Momentum	225
6.5.3 Conservation of Energy	230
6.5.4 Balance of Entropy	235
6.5.5 Body Force Potential	238
6.6 On the Forms of Macroscale Equations	240
6.7 Macroscale Principles for an Interface	242
6.7.1 Example: Conservation of Species Mass	242
6.7.2 Comment on Interface Equations	245
6.8 Macroscale Principles for a Common Curve	246
6.8.1 Example: Conservation of Common Curve Momentum	247
6.8.2 Comment on Common Curve Equations	249
6.9 Mixed Forms of Macroscale Equations	250
6.9.1 Species-based Equations	250
6.9.2 Entity-based Energy and Entropy	251
6.9.3 Entity-based Momentum, Energy, and Entropy	254
6.10 Internal Energy Equation	256
6.10.1 Species- and Entity-based Equations	256
6.10.2 Mixed Formulation with Species Conservation	257
6.11 Summary	258
Exercises	260
References	260
7 Macroscale Thermodynamics	263
7.1 Overview	263
7.2 Macroscale Euler Equations	264
7.2.1 Fluid Phase	264

7.2.2	Solid Phase	267
7.2.3	Interface and Common Curve	268
7.3	Macroscale Energy Differentials	269
7.4	Fluid Energy Dynamics	271
7.4.1	Fluid Species Energy	272
7.4.2	Fluid Species Potential Energy	275
7.4.3	Fluid-phase Energy	276
7.4.4	Fluid-phase Potential Energy	277
7.5	Solid-phase Energy Dynamics	278
7.5.1	Solid Species Energy	278
7.5.2	Solid Species Potential Energy	284
7.5.3	Solid-phase Energy	284
7.5.4	Solid-phase Potential Energy	285
7.6	Interface Energy Dynamics	285
7.6.1	Interface Species Energy	286
7.6.2	Interface Species Potential Energy	289
7.6.3	Interface-entity Energy	289
7.6.4	Interface-entity Potential Energy	290
7.7	Common Curve Energy Dynamics	291
7.7.1	Common Curve Species Energy	291
7.7.2	Common Curve Species Potential Energy	292
7.7.3	Common Curve Entity Energy	292
7.7.4	Common Curve Entity Potential Energy	293
7.8	Equilibrium Conditions	293
7.8.1	Two-phase Equilibrium Conditions	294
7.8.2	Three-phase Equilibrium Conditions	296
7.9	Summary	299
	Exercises	299
	References	300
8	Evolution Equations	301
8.1	Overview	301
8.2	Derivation of Evolution Equations	303
8.2.1	General Expression	303
8.3	Single-fluid-phase Flow	305
8.3.1	Phases	305
8.3.2	Interface	306
8.4	Single-fluid-phase Flow Geometric Relations	306
8.5	Two-fluid-phase Flow	308
8.5.1	Solid Phase	309
8.5.2	Fluid Phases	310
8.5.3	Fluid-solid Interfaces	311
8.5.4	Fluid-fluid Interface	312
8.5.5	Common Curve	314
8.6	Two-fluid-phase Flow Geometric Relations	316

8.6.1	Solid Phase and Fluid-solid Interfaces	316
8.6.2	Fluid-fluid Interface Evolution	317
8.6.3	Common Curve Evolution	320
8.7	Average Normal Velocities	321
8.7.1	Fluid-fluid Interface Velocity Approximation	322
8.7.2	Common Curve Velocity Approximation	323
8.8	Summary	324
	Exercises	325
	References	326
9	Single-fluid-phase Flow	327
9.1	Overview	327
9.2	Single-phase-flow System Definition	329
9.3	Conservation and Thermodynamic Equations	332
9.3.1	Entropy Inequality	332
9.3.2	Conservation Equations	333
9.3.3	Thermodynamic Relations	334
9.4	Constrained Entropy Inequality	335
9.4.1	Augmented Entropy Inequality	335
9.4.2	Selection of Lagrange Multipliers	336
9.4.3	Elimination of Time Derivatives	339
9.4.4	Manipulation Insights	341
9.4.5	Formulation of the CEI	344
9.5	Simplified Entropy Inequality	348
9.5.1	The Need for Approximations	349
9.5.2	Elimination of Terms	349
9.5.3	Approximation of Averages	351
9.5.4	General SEI	354
9.6	Example Restricted Application	355
9.6.1	Statement of Secondary Restriction	356
9.6.2	Count of Variables	357
9.6.3	Reduction in Number of Variables	358
9.6.4	Conjugate Force-flux Closure	360
9.6.5	Closed Conservation Equation Set	362
9.7	Model of Fluid and Elastic Solid	363
9.7.1	Compressible Elastic Solid with Small Deformation	364
9.7.2	Passive Solid Phase	367
9.8	Summary	370
	Exercises	370
	References	371
10	Single-fluid-phase Species Transport	373
10.1	Overview	373
10.2	System Definition by Primary Restrictions	375
10.3	Constrained Entropy Inequality	377

10.3.1	Augmented Entropy Inequality	377
10.3.2	Determination of Lagrange Multipliers	380
10.3.3	Formulation of the CEI	384
10.4	Simplified Entropy Inequality	389
10.4.1	Elimination of Small Terms	390
10.4.2	Breaking of Averages	392
10.4.3	General SEI	394
10.5	SEI for Application to Non-isothermal Species Transport	396
10.5.1	Imposition of Secondary Restrictions	396
10.6	Isothermal Transport with No Interphase Mass Exchange	400
10.6.1	Simplification of SEI	400
10.6.2	Count of Equations and Variables	401
10.7	Isothermal Transport with Interphase Mass Exchange	402
10.7.1	Simplification of the SEI	402
10.7.2	Additional Variables and Constraints	403
10.8	Unitemperature, Nonisothermal Transport	404
10.8.1	Simplification of the SEI for a Single Temperature	404
10.8.2	Accounting for Additional Variables	405
10.9	Multi-temperature Species Transport	407
10.9.1	SEI for the Multi-temperature Case	407
10.9.2	Treatment of Additional Variables	408
10.10	Example of Conjugate Force-flux Closure	409
10.10.1	Closure Relations	410
10.10.2	Closed Set of Conservation Equations	414
10.11	Summary	418
	Exercises	419
	References	420
11	Two-phase Flow	421
11.1	Overview	421
11.2	Primary Restrictions	423
11.3	Constrained Entropy Inequality Statement	424
11.3.1	Entropy Inequality	424
11.3.2	Augmented Entropy Inequality	424
11.3.3	Selection of Lagrange Multipliers	425
11.3.4	Expanded CEI	425
11.4	Simplified Entropy Inequality	429
11.4.1	Required SEI Approximations	430
11.4.2	Basic SEI Approximations	431
11.4.3	Complex SEI Approximations	435
11.4.4	Product Breaking SEI Approximations	442
11.4.5	General SEI	445
11.5	Example Application	448
11.5.1	Selection of Secondary Restrictions	448
11.5.2	Identification of Variables	450

11.5.3	Specification of Closure Conditions	450
11.5.4	Closed Set of Conservation Equations	454
11.6	Simplified Momentum Equations for Example Model	456
11.7	Immobile Solid	459
11.8	Summary	461
