

Contents

- 1 Introduction 1**
 - 1.1 DRG-Systems and the Economic Situation in Hospitals 1
 - 1.2 Necessity of a Holistic Planning Approach 4
 - 1.3 Strategic, Tactical and Operational Problems in Hospitals 5
 - 1.4 Topic of This Dissertation 6
 - 1.5 Outline 8
- 2 Machine Learning for Early DRG Classification 9**
 - 2.1 Machine Learning for Health Care: A Literature Review 9
 - 2.1.1 Selection Criteria and Search for Relevant Literature 10
 - 2.1.2 Classification of Relevant Literature 11
 - 2.2 Attribute Ranking and Selection Techniques Employed for Early DRG Classification 15
 - 2.2.1 Information Gain Attribute Ranking 15
 - 2.2.2 Relief-F Attribute Ranking 17
 - 2.2.3 Markov Blanket Attribute Selection 20
 - 2.2.4 Correlation-Based Feature Selection 24
 - 2.2.5 Wrapper Attribute Selection 24
 - 2.3 Classification Techniques Employed for Early DRG Classification 25
 - 2.3.1 Naive Bayes 26
 - 2.3.2 Bayesian Networks 26
 - 2.3.3 Classification Trees 27
 - 2.3.4 Voting-Based Combined Classification 30
 - 2.3.5 Probability Averaging to Combine the DRG Grouper with Machine Learning Approaches 31
 - 2.3.6 Decision Rule-Based Mapping of Attribute Values to DRGs 31
- 3 Scheduling the Hospital-Wide Flow of Elective Patients 33**
 - 3.1 Mathematical Programming Applied to Patient Scheduling in Hospitals 33

3.1.1	Selection Criteria and Search for Relevant Literature	34
3.1.2	Classification of Relevant Literature	34
3.2	The Patient Flow Problem with Fixed Admission Dates	41
3.3	The Patient Flow Problem with Variable Admission Dates	46
3.4	An Example of the Patient Flow Problem with Fixed and Variable Admission Dates.....	48
3.5	A Rolling Horizon Approach for Scheduling the Hospital-Wide Flow of Elective Patients	51
4	Experimental Analyses	55
4.1	Experimental Evaluation of the Early DRG Classification	55
4.1.1	Data from Patients That Contact the Hospital Before Admission (Elective Patients)	55
4.1.2	Data from All Patients Available at Admission (Elective and Non-elective Patients).....	57
4.1.3	Results of the Attribute Ranking and Selection	60
4.1.4	Evaluation Techniques for the Classification Part	63
4.1.5	Computation Times	64
4.1.6	Parameter Optimization for the Classification Tree	68
4.1.7	Results of the Classification Techniques	70
4.1.8	Investigation on Major Diagnostic Categories	76
4.1.9	Investigation on Selected DRGs	79
4.1.10	Evaluation of Expected Revenue Estimates	82
4.2	Computational and Economic Analysis of Scheduling the Hospital-Wide Flow of Elective Patients	84
4.2.1	Data and Instance Generation.....	84
4.2.2	Computation Time Analysis of the Static Approaches	87
4.2.3	Economic Analysis of the Static Approaches	87
4.2.4	Economic Analysis of the Rolling Horizon Approach	88
5	Conclusion	93
5.1	Summary	93
5.2	Main Research Contributions.....	95
5.3	Future Research	95
A	Notation and List of Abbreviations	97
B	Attributes Assessed and Ranking Results for the Early DRG Classification.....	101
	Bibliography	109

Optimizing Hospital-wide Patient Scheduling
Early Classification of Diagnosis-related Groups
Through Machine Learning

Gartner, D.

2014, XIV, 119 p. 22 illus., Softcover
