

Contents

1	Introduction	1
1.1	Background	4
1.2	Protein Function Prediction Scenarios	6
1.3	State of the Art Methods	7
	References	7
2	Methods	13
2.1	Calculating the Joint Probability of a Graph	13
2.1.1	Calculating the Information Content of a Graph	16
2.1.2	Comparing Two Annotation Graphs	17
2.1.3	Measuring the Quality of Function Prediction	18
2.1.4	Weighted Metrics	20
2.1.5	Semantic Distance	20
2.1.6	Precision and Recall	21
2.1.7	Supplementary Evaluation Metrics	22
2.1.8	Additional Topological Metrics	25
2.2	Confusion Matrix Interpretation of <i>ru</i> and <i>mi</i>	25
2.3	Annotation Models	26
2.3.1	The Naïve Model	26
2.3.2	The BLAST Model	27
2.3.3	The GOtcha Model	27
	References	27
3	Experiments and Results	29
3.1	Average Information Content of a Protein	29
3.2	Comparative Examples of Calculating Information Content	30
3.3	Two-Dimensional Plots	33
3.4	Comparisons of Single Statistics	35
	References	40
4	Discussion	43
	References	44
	Index	45

Information-Theoretic Evaluation for Computational
Biomedical Ontologies

Clark, W.T.

2014, VII, 46 p. 12 illus., 6 illus. in color., Softcover

ISBN: 978-3-319-04137-7
