

Contents

1 Introduction	1
1.1 Evolution of Control Technology	1
1.1.1 Data Scheduling	3
1.1.2 Wireless Networks	5
1.1.3 Quality of Service (QoS)	7
1.1.4 The Power Control Problem (PCP)	7
1.1.5 The Medium Access Control Problem (MACP)	7
1.1.6 Transport Capacity	8
1.1.7 Asynchronous Transfer Mode (ATM) Networks	8
1.2 Networked Control Systems (NCS)	10
1.2.1 Advantages	12
1.2.2 Limitations and Drawbacks	12
1.2.3 Limited Communication Bandwidth	13
1.2.4 Transmission Losses	13
1.3 Outline of the Book	14
1.3.1 Methodology	14
1.3.2 Chapter Organization	15
References	16
2 Role of Delays	19
2.1 Introduction	19
2.2 Initial Design Methods	21
2.2.1 Network Induced Delay	23
2.2.2 NCS Model	23
2.2.3 Maximum Allowable Delay Bound	26
2.3 Problems in Networks and Control	28
2.4 Classes of Problems	29
2.4.1 Class I Problems	30
2.4.2 Class II Problems	32
2.5 Notes	34
2.6 Suggested Problems	34
References	35

3 Nonstationary Packet Dropouts	39
3.1 Literature Review	39
3.1.1 Models Incorporating only Packet Losses	41
3.1.2 Models Incorporating only Network Delays	43
3.1.3 Models Incorporating Multiple Network Phenomena	47
3.2 Nonstationary Packet Dropouts	52
3.2.1 Model Setup	53
3.2.2 Stability Analysis and Controller Synthesis	56
3.2.3 Uninterruptible Power System	63
3.2.4 Autonomous Underwater Vehicle	65
3.3 Quantization	68
3.3.1 Problem Description	72
3.3.2 Controller Design	75
3.3.3 Simulation Example 1	82
3.4 Nonlinear Systems	84
3.4.1 A Class of Models	87
3.4.2 Design Results	90
3.4.3 Simulation Example 2	97
3.5 Output-Feedback with Probabilistic Delays	102
3.5.1 Introduction	102
3.5.2 Problem Statement	103
3.5.3 Feedback Design	105
3.5.4 Simulation Example 3	116
3.6 Notes	117
3.7 Suggested Problems	118
References	121
4 Control Over Lossy Communication Channel	127
4.1 Output Feedback	127
4.1.1 Problem Statement	128
4.1.2 Control Design	129
4.1.3 Simulation Example 4	134
4.1.4 Simulation Example 5	136
4.2 Markov Jump Systems	140
4.2.1 Related Work	140
4.2.2 Model Layout	143
4.2.3 Completely Known Transition Matrices	147
4.2.4 Multiple-Packet Transmissions	153
4.2.5 Partially Known Transition Matrices	155
4.2.6 Simulation Example 6	159
4.3 Networked Predictive Control System	164
4.3.1 Introduction	166
4.3.2 System Analysis	168
4.3.3 Controller Design	175
4.3.4 Simulation Example 7	188

4.4	Dynamic Output Feedback	191
4.4.1	Model and Assumptions	193
4.4.2	Completely Known Transition Probability Matrices	197
4.4.3	Partially Known Transition Probability Matrices	200
4.4.4	Simulation Example 8	205
4.5	Robust Mixed H_2/H_∞ Control	208
4.5.1	Problem Formulation	209
4.5.2	Stochastic Stability	213
4.5.3	Robust H_2 Control	215
4.5.4	Robust Mixed H_2/H_∞ Control	216
4.5.5	Special Cases	218
4.5.6	Numerical Examples	221
4.6	Notes	222
4.7	Suggested Problems	223
	References	225
5	Systems Under Communication Constraints	229
5.1	Observer-Based Control Design	229
5.1.1	System Description	230
5.1.2	Closed-Loop System	233
5.1.3	Feedback Design	234
5.1.4	Simulation Example 9	244
5.1.5	Simulation Example 10	244
5.2	LQG Control Design	246
5.2.1	Linear Quadratic over Lossy Networks	250
5.2.2	Transmission Control Protocol	252
5.2.3	User Datagram Protocol	260
5.2.4	Estimator Design	260
5.2.5	Simulation Example 11	264
5.2.6	Simulation Example 12	267
5.3	Quantized H_∞ Estimator	272
5.3.1	Problem Statement	274
5.3.2	Hold Input (HI) Strategy	277
5.3.3	Zero-Input (ZI) Strategy	283
5.3.4	Simulation Example 13	288
5.3.5	Simulation Example 14	290
5.3.6	Simulation Example 15	293
5.4	Notes	294
5.5	Suggested Problems	296
	References	299
6	Estimation via Network Environment	303
6.1	State Estimation	303
6.1.1	Problem Formulation	304
6.1.2	Stability Analysis	305

6.1.3	Estimator Synthesis	308
6.1.4	Simulation Example 16	309
6.2	Robust Filter Design	310
6.2.1	Introduction	312
6.2.2	Problem Statement and Definitions	313
6.2.3	Robust Filter Design	315
6.2.4	Simulation Example 17	320
6.3	H_2 State Estimation	321
6.3.1	Problem Description	322
6.3.2	Stability and Performance Analysis	325
6.3.3	Estimator Design	328
6.3.4	Simulation Example 18	328
6.3.5	Simulation Example 19	329
6.4	Notes	329
6.5	Suggested Problems	331
	References	334
7	Event-Based Stabilization	337
7.1	Review	337
7.1.1	Simple Demonstration	339
7.1.2	Generic Model of Event-Based Loops	339
7.1.3	Network Communication Protocols	341
7.1.4	Event Triggering	341
7.2	Problem Description	342
7.3	Output Feedback	343
7.3.1	Event-Driven Controller Design	350
7.4	Simulation Results	352
7.4.1	Simulation Example 20	353
7.4.2	Simulation Example 21	354
7.5	Event-Based H_∞ Filtering	360
7.5.1	System Statement	362
7.5.2	H_∞ Filtering Performance Analysis	367
7.5.3	H_∞ Filter Design	370
7.5.4	Robust H_∞ Filter Design	372
7.5.5	Simulation Example 22	373
7.6	Notes	378
7.7	Suggested Problems	379
	References	381
