

Contents

Part I From Ancient Greece to the Renaissance

1	Physical Sciences and Physics	3
1.1	Philosophy of Physics	3
1.2	From Natural Philosophy to Physics	8
2	The Ideas of Greeks About Nature	11
2.1	The Basic Assumptions of Aristotle on Motion and Gravity	11
2.2	Success of the Basic Assumptions of Aristotle	13
2.3	Failure of the Underlying Assumptions and Need to Adopt New Ones.	14
2.4	Critical Review of Aristotle's Theory	16
2.4.1	Internal Contradictions.	17
2.4.2	Experimental Verification	19
3	From Classical Era to the Renaissance	21
3.1	Hellenistic-Roman Times	21
3.2	Middle Ages and the Renaissance	23
3.3	Layout of the Book	26

Part II From the Renaissance to the Present Era

4	The Major Branches of Physics	29
4.1	Mechanics	30
4.1.1	Kinematics: Galileo.	30
4.1.2	Dynamics–Gravity: Newton	36
4.1.3	Solid Body: Huygens.	42
4.1.4	Analytical Mechanics	43
4.1.5	Nonlinear Mechanics	45
4.1.6	Mechanics Today	45
4.2	Optics	46
4.2.1	The Period up to The Renaissance	46
4.2.2	Corpuscular Nature of Light: Newton	46
4.2.3	Wave Nature of Light: Huygens	49

4.2.4	Establishment of the Wave Theory: Thomas Young	51
4.2.5	Completion of the Wave Theory: Fresnel.	53
4.2.6	Spectroscopy as a Branch of Optics	54
4.2.7	Relationship Between Mechanics and Optics	57
4.2.8	Optics Today	58
4.3	Static Magnetism and Electricity	58
4.3.1	From Antiquity to the Renaissance	58
4.3.2	Development of Experimentation	60
4.3.3	The Law of Electrostatic Force: Coulomb	63
4.3.4	Relating Electricity, Magnetism and Gravity	65
4.4	Electric Currents and Electromagnetism	65
4.4.1	Invention of the Electric Cell	65
4.4.2	Beyond Electric Current: Electrolysis and Electromagnetism	68
4.4.3	Experimental Foundations of Electromagnetism: Faraday	73
4.4.4	Theoretical Foundations of Electromagnetism: Maxwell	77
4.4.5	Incompatibility Between Electromagnetism and Mechanics	78
4.4.6	Electromagnetism Today	81
4.5	Heat-Thermodynamics	82
4.5.1	Introduction	82
4.5.2	Phlogiston and Caloric Fluids.	83
4.5.3	First Axiom of Thermodynamics: Mayer, Joule, Helmholtz	86
4.5.4	Second Axiom of Thermodynamics: Carnot, Thomson	88
4.5.5	Entropy: Clausius	91
4.5.6	Thermodynamics Today.	94
4.6	Kinetic Theory of Perfect Gases	95
4.6.1	Relationship Between Thermodynamics and the Theory of Gases.	95
4.6.2	Atomic Theory	95
4.6.3	Distribution Function: Maxwell	97
4.6.4	Entropy and the Arrow of Time: Boltzmann	100
5	Physics of the 20th Century	105
5.1	Quantum Mechanics	107
5.2	Theory of Relativity.	110
5.2.1	Special Theory of Relativity.	110
5.2.2	General Theory of Relativity	113
5.3	Theory of Chaos	115

6	Lessons From Three Centuries of Physics	121
6.1	Geographical Area	121
6.2	Methods of Organization	122
6.3	Personality of Researchers	122
6.4	Conclusions	123
7	Organization of Teaching and Research	125
7.1	Universities Throughout the Centuries	125
7.1.1	Ancient Greece-Byzantium.	125
7.1.2	Western Europe	127
7.2	Research in Europe and the United States	129
7.3	Dissemination of Research Results	132
7.3.1	Publications	132
7.3.2	Conferences	134
	Further Reading	137

History and Evolution of Concepts in Physics

Varvoglis, H.

2014, XV, 138 p. 49 illus., 38 illus. in color., Hardcover

ISBN: 978-3-319-04291-6
