

Preface

Special Topics in Structural Dynamics, Volume 6 represents one of the eight volumes of technical papers presented at the 32nd IMAC, A Conference and Exposition on Structural Dynamics, 2014 organized by the Society for Experimental Mechanics, and held in Orlando, Florida, February 3–6, 2014. The full proceedings also include volumes on Dynamics of Coupled Structures; Nonlinear Dynamics; Model Validation and Uncertainty Quantification; Dynamics of Civil Structures; Structural Health Monitoring; Topics in Modal Analysis I; and Topics in Modal Analysis II.

Each collection presents early findings from experimental and computational investigations on an important area within structural dynamics. *Special Topics in Structural Dynamics* represents papers on enabling technologies for modal analysis measurements such as sensors and instrumentation, and applications of modal analysis in specific application areas. Topics in this volume include:

- Aircraft/aerospace
- Active control
- Analytical methods
- System identification
- Sensors and instrumentation

The organizers would like to thank the authors, presenters, session organizers, and session chairs for their participation in this track.
