

Contents

1	Basic Cardiac Anatomy and Electrocardiology	1
1.1	Conduction System: SA and AV Node, Purkinje Network	2
1.2	Cardiac Tissue Organization	4
1.3	Fiber and Laminar Architecture of Ventricular Myocardium	7
1.4	Cardiac Action Potentials	8
1.4.1	Action Potential Phases	8
1.4.2	Action Potential Heterogeneity	10
1.5	The Electrocardiogram (ECG)	11
1.5.1	ECG Leads	12
1.5.2	ECG Deflections and Intervals	13
1.5.3	ECG Diagnosis	15
1.6	Cardiac Imaging	17
2	Mathematical Models of Cellular Bioelectrical Activity	21
2.1	Excitable Cellular Membranes	21
2.2	The Nernst-Planck Equation	22
2.3	The Goldman-Hodgkin-Katz (GHK) Current-Voltage Relation	23
2.4	Nernst Equilibrium Potential	24
2.5	Thermodynamical Derivation of the Nernst Potential	25
2.6	Electrodiffusion Models: The Poisson-Nernst-Planck (PNP) Equation	28
2.6.1	PNP: The Short Channel or Low Concentrations Limit	31
2.6.2	PNP: The Long Channel or High Concentrations Limit	33
2.6.3	Equilibrium Potential for Multi-ion Fluxes	34
2.7	Electrical Circuit Model of the Cellular Membrane	35
2.8	Ion Channel Gating	36
2.9	Cardiac Action Potential Models	40
2.9.1	Hodgkin-Huxley Model	41
2.9.2	General Structure of Cardiac Cellular Membrane Models	42

2.9.3	Ionic Models of Purkinje Fibers, Sinoatrial Node (SAN), Atria	43
2.9.4	Ventricular Models	43
2.9.5	Charge Conservation in Ionic Models	55
2.9.6	Action Potential Duration Restitution Curve	59
2.9.7	Reduced Ionic Models	59
2.9.8	Phase-Plane Analysis of the FitzHugh-Nagumo (FHN) Model	62
2.9.9	Bifurcation Diagrams	70
3	Mathematical Models of Cardiac Cells Arrangements:	
	The Bidomain Model	77
3.1	Models of Cardiac Fibers	77
3.1.1	Cable Equation	77
3.1.2	Homogenization	80
3.1.3	Traveling Waves	86
3.1.4	Conduction Velocity Restitution Curve	92
3.2	Models of Cardiac Tissue	93
3.2.1	The Dimensionless Cellular Model \mathbf{P}^ε	97
3.2.2	Formal Two-Scale Homogenization	98
3.2.3	The Dimensionless Averaged Model \mathbf{P}	100
3.2.4	Theoretical Results for the Cellular and Averaged Models	101
3.2.5	Γ -Convergence Result for the Averaged Model with FHN Dynamics	103
3.3	The Macroscopic Anisotropic Bidomain Model	106
3.4	Well-Posedness Results Based on Semi-discretization in Time	108
3.5	Well-Posedness Results Based on Faedo-Galerkin Techniques	112
3.6	Well-Posedness Results Based on Fixed Point Arguments	116
3.7	Semi-discrete Approximation of the Bidomain Model with FHN Dynamics	120
4	Reduced Macroscopic Models: The Monodomain and Eikonal Models	123
4.1	Linear Anisotropic Monodomain Model	123
4.2	Eikonal Models	125
4.3	Relaxed Non-linear Anisotropic Monodomain Model	132
4.4	Dimensional Form of the Reduced Models	133
4.4.1	Well-Posedness Results for Reduced Models	136
4.4.2	Frank and Wulff Diagrams	136
4.5	Numerical Comparison	143
5	Anisotropic Cardiac Sources	149
5.1	Differential Formulation of the Potential Field	150
5.2	Integral Formulation of the Potential Field	152

5.3	Approximate Representation of Cardiac Sources	156
5.3.1	Heart Surface Source Model	157
5.3.2	Oblique Dipole Source Model	159
5.4	Cardiac Source Splitting	162
5.4.1	Axially Symmetric Media	162
5.4.2	Orthotropic Media	165
5.5	Interpretation of the Field Components	166
5.6	The Limit Case: Oblique Dipole Layer Model	168
5.7	Experimental and Simulation Results	170
6	The Inverse Problem of Electrocardiology	175
6.1	Inverse Problem in Terms of Potential Alone	176
6.2	Macroscopic Equivalent Excitation Cardiac Sources	180
6.3	Boundedness of the Potential	184
6.4	Numerical Approximation of the Integral Representation of the Potential	185
6.5	Inverse Problem in Terms of Wavefront	187
7	Numerical Methods for the Bidomain and Reduced Models	191
7.1	Space Discretization of Monodomain and Bidomain Models	191
7.2	Time Discretization of Monodomain and Bidomain Models	194
7.2.1	Fully Implicit Methods	194
7.2.2	Decoupled Implicit Methods	195
7.2.3	Decoupled Semi-implicit Methods	196
7.2.4	Operator Splitting Methods: Splitting ODEs and PDEs	203
7.3	Numerical Approximation of the Eikonal-Diffusion Equation	204
8	Parallel Solvers for the Bidomain System	207
8.1	Bidomain Variational Setting	208
8.2	Abstract Convergence Theory for Schwarz Methods	215
8.3	Two-Level Additive Schwarz Methods for the Bidomain System ...	220
8.4	Multilevel Additive Schwarz Methods for the Bidomain System ...	223
8.5	Numerical Results for Multilevel Schwarz Preconditioners	227
8.5.1	Additive Preconditioner	228
8.5.2	Multiplicative and Hybrid Preconditioners	234
8.6	Block Preconditioners for the Bidomain System	241
8.6.1	Block-Diagonal and Block-Factorized Bidomain Preconditioners	241
8.6.2	Numerical Results with Block Preconditioners	244
9	Simulation Studies of Cardiac Bioelectrical Activity	249
9.1	Cardiac Excitation and Virtual Electrode Phenomena	250
9.1.1	Methods and Parameter Calibration	252
9.1.2	Anode and Cathode Make Mechanisms	254
9.1.3	Anode and Cathode Break Mechanisms	262
9.1.4	Cathodal and Anodal Strength-Interval S-I Curves	268

9.2	Anisotropic Propagation of Excitation and Recovery Fronts	270
9.2.1	Excitation and Repolarization Sequences	271
9.2.2	Discussion on APD Distribution and Dispersion	279
9.3	Heterogeneous Cardiac Tissue	284
9.3.1	Transmural Heterogeneity in 3-D Cardiac Slabs	287
9.3.2	Transmural Heterogeneity in 3-D Ellipsoids	298
9.3.3	Transmural and Apex-Base Heterogeneity in 3-D Ellipsoids	309
9.4	QRS Complex and T Wave Morphology in Electrograms	315
9.4.1	Methods and Parameter Calibration	316
9.4.2	Unipolar and Bipolar ECG Simulations	318
9.5	Extracellular Markers of Excitation and Repolarization Times	323
9.5.1	Waveform Postprocessing and Repolarization Time Markers	326
9.5.2	Parameter Calibrations for the Model Simulations	329
9.5.3	Global Quantitative Analysis of RT Markers	332
9.6	Subendocardial Ischemia, ST Depression and Elevation	339
9.6.1	Mechanisms for the ST Segment Potential Patterns	339
9.6.2	Ischemic Simulations	343
9.7	Reentry Phenomena	348
9.7.1	Stable Scroll Waves	352
9.7.2	Scroll Waves Breakup	353
9.7.3	Scroll Waves in Ellipsoidal Geometry	357
A	Cardiac Simulation Projects, Software, Libraries	361
A.1	IUPS Physiome Project	361
A.2	Virtual Physiological Human (VPH)	362
A.3	NSR Physiome	362
A.4	Other Simulation Software and Modeling Environments	363
A.5	Some Related Monographs	364
A.6	Physical Units and Constants	366
	References	367
	Index	395

Mathematical Cardiac Electrophysiology

Colli Franzone, P.; Pavarino, L.F.; Scacchi, S.

2014, XIV, 397 p. 138 illus., 78 illus. in color., Hardcover

ISBN: 978-3-319-04800-0
