1	Introduction	1
2	Signal Processing at Receivers: Detection Theory	5
2.1	Principles of Hypothesis Testing	5
2.2	Maximum a Posteriori Probability Hypothesis Test	6
2.3	Baysian Hypothesis Test	11
2.4	Maximum Likelihood Hypothesis Test	12
2.5	Likelihood Ratio-Based Hypothesis Test	13
2.6	Neyman–Pearson Lemma	15
2.7	Detection of Symmetric Signals	17
2.7.1	Error Probability	18
2.7.2	Bound Analysis	19
2.8	Binary Signal Detection	22
2.9	Detection of M -ary Signals	26
2.10	Concluding Remarks	28
3	MIMO Detection: Vector Space Signal Detection	29
3.1	Signals in Vector Space	29
3.2	Vector Space Signal Detection	31
3.3	Random Signal Detection	33
3.3.1	Likelihood Ratio Based Random Signal Detection	33
3.3.2	Signal Detection with Random Amplitude and Phase	34
3.3.3	Random Gaussian Vector Signal Detection	37
3.3.4	Pairwise Error Probability	39
3.4	MIMO Detection	41
3.4.1	ML Detection	43
3.4.2	Linear Detection	44
3.4.3	Performance Analysis	46
3.5	Concluding Remarks	49
4	Successive Interference Cancellation-Based MIMO Detection	51
4.1	SIC Detection	51
4.1.1	QR Factorization	51

4.1.2	ZF-SIC	52
4.1.3	MMSE-SIC	55
4.1.4	Ordering	56
4.1.5	Performance Analysis	58
4.2	List-Based Detection	62
4.2.1	Detection Algorithms	63
4.2.2	Ordering	65
4.2.3	Sub-detectors	68
4.2.4	Performance Analysis	71
4.3	SIC-Based MAP Detection	73
4.3.1	Partial MAP Detection	75
4.3.2	Partial MAP-Based List Detection	80
4.3.3	Performance Analysis	88
4.4	Concluding Remarks	90
5	Lattice Reduction-Based MIMO Detection.	91
5.1	Lattice Reduction-Based Detection	91
5.1.1	MIMO Systems with Lattice	91
5.1.2	Lattice Reduction-Based MIMO Detection	93
5.1.3	Two-Basis Lattice Reduction	99
5.1.4	Two-Basis Gaussian Lattice Reduction	104
5.1.5	LLL and CLLL Algorithms	109
5.1.6	Performance Analysis	115
5.2	Lattice Reduction-Based SIC-List Detection	123
5.2.1	Detection Algorithm	124
5.2.2	Lattice Reduction-Based Subdetection	126
5.2.3	List Generation in the LR Domain	127
5.2.4	Impact of List Length	129
5.2.5	Column Reordering Criteria	132
5.2.6	Performance Analysis	135
5.3	Lattice Reduction-Based Partial MAP-List Detection	137
5.3.1	Detection Algorithm	138
5.3.2	Performance Analysis	139
5.4	Concluding Remarks	141
6	MIMO Iterative Receivers	143
6.1	Convolutional Codes	143
6.1.1	Convolutional Encoders	144
6.1.2	Decoding Approaches for Convolutional Codes	146
6.2	Turbo Principle and BICM-ID	150
6.2.1	Structure and Operation of BICM-ID	150
6.2.2	Performance Analysis of BICM-ID Using EXIT Chart	152

6.3	MIMO Iterative Receivers with Optimal MIMO Detection . . .	157
6.3.1	BICM for MIMO Channels	158
6.3.2	Structure of Iterative Receivers	158
6.4	MIMO Iterative Receivers with Suboptimal MIMO Detection	161
6.4.1	List-Sphere Decoding	161
6.4.2	Monte Carlo Markov Chain Sampling.	166
6.4.3	MMSE-SC.	170
6.4.4	Numerical Results	171
6.4.5	BER Performance.	174
6.5	Concluding Remarks.	174
7	Bit-Wise MIMO-BICM-ID Using Lattice Reduction.	175
7.1	LR-Based IDD Using Bit-Wise Filtering.	175
7.1.1	LR-Based Detection	176
7.1.2	LR-Based Bit-Wise MMSE Filtering	178
7.1.3	List Generation Using Integer Perturbation	181
7.1.4	List Generation Using Quantization	183
7.2	Channel Decomposition for Large Systems	183
7.3	Complexity Analysis.	186
7.3.1	Detection Complexity	186
7.3.2	Reduction Complexity.	187
7.3.3	Decomposition Complexity	188
7.4	Numerical Results	188
7.4.1	Comparison of Bit-LR 1 and Bit-LR 2	189
7.4.2	Complexity Comparison	190
7.4.3	Convergence Analysis.	191
7.4.4	BER Performance.	192
7.5	Concluding Remarks.	193
8	Randomized Sampling-Based MIMO Iterative Receivers	195
8.1	System Model	195
8.2	LR-Based SIC Detection	197
8.3	LR-Based IDD Using Randomized Sampling.	198
8.3.1	Gaussian Approximation in the LR Domain.	198
8.3.2	Randomized List Generation	199
8.3.3	Complex-Valued List Generation	204
8.4	Complexity Analysis.	205
8.5	Numerical Results	207
8.6	Concluding Remarks.	213
9	Iterative Channel Estimation and Detection.	215
9.1	EM Algorithm	216
9.2	Iterative Channel Estimation and Detection	218

9.2.1	System Model	218
9.2.2	EM-Based Semi-blind Channel Estimation	219
9.2.3	EM-Based ICED Algorithm.	220
9.3	LR-Based ICED	220
9.3.1	LR-Based Detection within ICED.	220
9.3.2	Complexity-Efficient LR-ICED	222
9.4	LR-ICED Over Slow Fading Channels	225
9.5	Numerical Results	228
9.6	Concluding Remarks.	230
10	Multuser and Multicell MIMO Systems:	
	The Use of Lattice Reduction	233
10.1	Single User Selection	234
10.1.1	Maximum Mutual Information	235
10.1.2	User Selection for ML Detection	236
10.1.3	User Selection for Linear Detection	237
10.1.4	User Selection for LR-Based Detection.	238
10.1.5	Performance Analysis	241
10.2	Multiple-User Selection.	246
10.2.1	Combinatorial User Selection.	248
10.2.2	Greedy User Selection.	251
10.2.3	Performance Analysis	258
10.3	Lattice-Based Interference Alignment for Multuser MIMO Systems	268
10.3.1	System Model	269
10.3.2	Lattice-Based Interference Alignment	269
10.3.3	Joint Signal Detection and Precoder Design with IA-L	271
10.3.4	Numerical Results	273
10.4	Multichannel Sharing and Joint Detection in Downlink Multicell OFDMA Systems	274
10.4.1	System Models.	275
10.4.2	Joint Detection LR-Based Detectors	277
10.4.3	LR-Based Joint Detection Over Subspace	278
10.4.4	Numerical Results	281
10.5	Concluding Remarks.	282
