

Contents

1 Non-standard Packing Problems: A Modelling-Based Approach	1
2 Tetris-like Items	7
2.1 General Problem Statement and Mathematical Model Formulation	7
2.2 Excluding Non-realistic Solutions	14
2.3 Additional Conditions	16
2.3.1 Conditions on Item Position and Orientation	16
2.3.2 Conditions on Pairwise Relative Distance	16
2.3.3 Conditions on Domains	19
2.3.4 Conditions on the Total Mass Loaded and Its Distribution	20
2.3.5 Further Loading Restrictions	23
3 Model Reformulations and Tightening	27
3.1 Alternative Models	27
3.1.1 General MIP Model First Linear Reformulation	28
3.1.2 General MIP Model Second Linear Reformulation	30
3.1.3 A Non-restrictive Reformulation of the General MIP Model	31
3.1.4 General MIP Model Nonlinear Reformulation	32
3.2 Implications and Valid Inequalities	34
4 Heuristic Approaches for Solving the Tetris-like Item Problem in Practice	39
4.1 Intrinsic Difficulties	39
4.2 Abstract Configurations	41
4.3 Solution Search	45
4.3.1 Initialization	45
4.3.2 Heuristic Process Based on Suggested Abstract Configurations	49

4.3.3	Heuristic Process Based on Imposed Abstract Configurations	50
4.3.4	Interaction with the Solution Process	57
5	Computational Experience and Real-World Context	59
5.1	Direct Solutions Obtained from the General MIP Model	59
5.2	Direct Solutions Obtained by Reformulations of the General MIP Model	61
5.3	Use of the Linear Reformulations to Obtain Approximate Solutions	65
5.4	Nonlinear Reformulation Approach to Improve Approximate Solutions	66
5.5	The Use of Heuristics	69
5.5.1	Test Instances from the Literature	69
5.5.2	Instance Adopted to Tune the Solution Strategy	72
5.5.3	Close-to-Real-World Instances	73
6	Extensions and Mixed-Integer Nonlinear Approaches for Further Applications	75
6.1	Exploiting Empty Volumes by Adding Virtual Items	75
6.1.1	Model Formulation	76
6.1.2	Model Approximations	78
6.1.3	Applications	80
6.2	Non-orthogonal Packing of Non-rectangular Items	82
6.2.1	Approximate MINLP Model	83
6.2.2	Applications	87
7	Directions for Future Research	91
7.1	Experimental Context	91
7.2	Modeling Enhancements and New Applications	94
7.2.1	Extension of the Packing Models	94
7.2.2	Application to Scheduling Problems with Nonconstant Resource Availability and Nonconstant Operational Cycles	96
	Appendix	103
	Case Studies 1.1–1.20	103
	Case Studies 2.2–2.4	107
	Case Studies 3.2 and 3.3	111
	Case Study 6	115
	Virtual Items	117
	References	121
	Index	131

Solving Non-standard Packing Problems by Global
Optimization and Heuristics

fasano, g.

2014, XIV, 135 p. 51 illus. in color., Softcover

ISBN: 978-3-319-05004-1
