

Contents

1	Introduction: Why Focus on Energy Instruction?	1
	Arthur Eisenkraft, Jeffrey Nordine, Robert F. Chen, David Fortus, Joseph Krajcik, Knut Neumann, and Allison Scheff	
Part I What Should Students Know About Energy?		
2	A Physicist’s Musings on Teaching About Energy	15
	Helen R. Quinn	
3	A Space Physicist’s Perspective on Energy Transformations and Some Implications for Teaching About Energy Conservation at All Levels	37
	Ramon E. Lopez	
4	Conservation of Energy: An Analytical Tool for Student Accounts of Carbon-Transforming Processes	47
	Jenny M. Dauer, Hannah K. Miller, and Charles W. (Andy) Anderson	
Part II What Does the Research Say About the Teaching and Learning About Energy?		
5	Teaching and Learning the Physics Energy Concept	67
	Reinders Duit	
6	What Knowledge and Ability Should High School Students Have for Understanding Energy in Chemical Reactions? An Analysis of Chemistry Curriculum Standards in Seven Countries and Regions.....	87
	Lei Wang, Weizhen Wang, and Rui Wei	

7	Developing and Using Distractor-Driven Multiple-Choice Assessments Aligned to Ideas About Energy Forms, Transformation, Transfer, and Conservation.....	103
	Cari F. Herrmann-Abell and George E. DeBoer	
8	Mapping Energy in the Boston Public Schools Curriculum	135
	Robert F. Chen, Allison Scheff, Erica Fields, Pamela Pelletier, and Russell Faux	
 Part III Challenges Associated with the Teaching and Learning of Energy		
9	Using Ideas from the History of Science and Linguistics to Develop a Learning Progression for Energy in Socio-ecological Systems	157
	Hui Jin and Xin Wei	
10	Contextual Dimensions of the Energy Concept and Implications for Energy Teaching and Learning.....	175
	Xiufeng Liu and Mihwa Park	
11	Towards a Research-Informed Teaching Sequence for Energy	187
	Robin Millar	
12	Distinctive Features and Underlying Rationale of a Philosophically-Informed Approach for Energy Teaching.....	207
	Nicos Papadouris and Constantinos P. Constantinou	
13	Repairing Engineering Students' Misconceptions About Energy and Thermodynamics	223
	Margot Vigeant, Michael Prince, and Katharyn Nottis	
 Part IV Opportunities and Approaches for Teaching and Learning About Energy		
14	Looking Through the Energy Lens: A Proposed Learning Progression for Energy in Grades 3–5	241
	Sara Lacy, R.G. Tobin, Marianne Wiser, and Sally Crissman	
15	Opportunities for Reasoning About Energy Within Elementary School Engineering Experiences	267
	Kristen Bethke Wendell	
16	Launching the Space Shuttle by Making Water: The Chemist's View of Energy	285
	Angelica M. Stacy, Karen Chang, Janice Coonrod, and Jennifer Claesgens	

17	Energy in Chemical Systems: An Integrated Approach	301
	Melanie M. Cooper, Michael W. Klymkowsky, and Nicole M. Becker	
18	Energy Spreading or Disorder? Understanding Entropy from the Perspective of Energy	317
	Rui Wei, William Reed, Jihua Hu, and Cong Xu	
19	Constructing a Sustainable Foundation for Thinking and Learning About Energy in the Twenty-First Century	337
	Lane Seeley, Stamatis Vokos, and Jim Minstrell	
20	Conclusion and Summary Comments: Teaching Energy and Associated Research Efforts	357
	Joseph Krajcik, Robert F. Chen, Arthur Eisenkraft, David Fortus, Knut Neumann, Jeffrey Nordine, and Allison Scheff	
	Appendices	365

Teaching and Learning of Energy in K – 12 Education

Chen, R.F.; Eisenkraft, A.; Fortus, D.; Krajcik, J.;

Neumann, K.; Nordine, J.C.; Scheff, A. (Eds.)

2014, IX, 379 p. 35 illus., 16 illus. in color., Hardcover

ISBN: 978-3-319-05016-4
