| <b>1</b> | <b>Small Parameter Methods: Basic Ideas</b>                                     | <b>1</b>  |
| 1.1      | Introduction  | 1         |
| 1.2      | Small Parameter in Physical Models  | 4         |
| 1.2.1    | Classical Mechanics and Relativistic Mechanics                                  | 5         |
| 1.2.2    | Classical Mechanics and Quantum Mechanics                                       | 5         |
| 1.2.3    | Theory of Inviscid Fluids (TIF) and Theory of Viscous Fluids (TVF)              | 5         |
| 1.2.4    | The Macroscopic and Mesoscopic Description in the Framework of Kinetic Theory   | 6         |
| 1.3      | Small Parameter in Biological Models  | 7         |
| 1.3.1    | The Allee-Type Model  | 7         |
| 1.3.2    | An Epidemiological Model  | 11        |
| 1.3.3    | Structured Population Dynamics with Fast Migrations                             | 13        |
| 1.3.4    | Equations of Random Walks   | 16        |
| 1.3.5    | Alignment   | 21        |
| 1.3.6    | Michaelis–Menten Kinetics   | 24        |
| 1.4      | Basics of Asymptotic Analysis   | 27        |
| 1.4.1    | General Framework of Asymptotic Procedures                                      | 28        |
| 1.4.2    | Introductory Problems   | 32        |
| <b>2</b> | <b>Introduction to the Chapman–Enskog Method: Linear Models with Migrations</b> | <b>45</b> |
| 2.1      | Basics of Linear Dynamical Systems  | 46        |
| 2.1.1    | Fundamental Solution Matrix   | 48        |
| 2.1.2    | Eigenvalues, Eigenvectors and Associated Eigenvectors                           | 50        |
| 2.1.3    | The Exponential of a Matrix   | 52        |
| 2.1.4    | Spectral Decomposition  | 56        |
| 2.1.5    | Transition Matrices   | 59        |
| 2.2      | The Asymptotic Procedure  | 61        |
| 2.2.1    | The Bulk Approximation  | 62        |
| 2.2.2    | The Initial Layer   | 66        |

|          |   |     |
|----------|---|-----|
| 2.3      | Interacting Populations with Space Structure.....   | 69  |
| 2.3.1    | Emerging Properties.....  | 75  |
| 2.3.2    | Asymptotics on $[0, \infty[$ .....  | 75  |
| <b>3</b> | <b>Tikhonov–Vasilyeva Theory</b> .....  | 77  |
| 3.1      | Regular Perturbation.....   | 77  |
| 3.2      | Singular Perturbation.....  | 79  |
| 3.2.1    | A Simple Case.....  | 82  |
| 3.3      | The Tikhonov Theorem.....   | 84  |
| 3.4      | Initial Layer.....  | 92  |
| 3.5      | Error Estimates.....  | 93  |
| 3.6      | The Vasilyeva Theorem.....  | 98  |
| <b>4</b> | <b>The Tikhonov Theorem in Some Models of Mathematical Biosciences</b> .....  | 105 |
| 4.1      | The Allee Model.....  | 105 |
| 4.1.1    | The Case of Short Satiation Time: $\sigma/\mu \sim 1/\varepsilon$ .....   | 106 |
| 4.1.2    | The Case with Short Satiation and High Searching Efficiency: $\sigma/\mu \sim 1/\varepsilon, \xi/\mu \sim 1/\varepsilon$ .....  | 107 |
| 4.1.3    | The Case with Short Satiation, High Searching Efficiency and High Searching Death Rate: $\sigma/\mu \sim 1/\varepsilon, \xi/\mu \sim 1/\varepsilon, \lambda/\mu \sim 1/\varepsilon$ ..... | 110 |
| 4.2      | SIS Model with Basic Age Structure.....   | 113 |
| 4.2.1    | The SIS Model.....  | 114 |
| 4.2.2    | An SIS Model with an Age Structure and Its Basic Properties.....  | 115 |
| 4.2.3    | Application of the Tikhonov Theorem.....  | 117 |
| 4.2.4    | Comments on the ‘Stable–Unstable’ Case.....   | 124 |
| 4.2.5    | Numerical Illustration.....   | 126 |
| 4.2.6    | Conclusions.....  | 131 |
| 4.3      | Population Problems with Fast Migrations.....   | 132 |
| 4.3.1    | The Model.....  | 133 |
| 4.3.2    | Basic Quasi Steady State Approximation.....   | 134 |
| 4.3.3    | Approximation Preserving Long Time Dynamics.....  | 136 |
| <b>5</b> | <b>Asymptotic Expansion Method in a Singularly Perturbed McKendrick Problem</b> .....   | 143 |
| 5.1      | Rudiments of the Semigroup Theory.....  | 144 |
| 5.1.1    | Generation of Semigroups.....   | 147 |
| 5.1.2    | Nonhomogeneous Problems.....  | 148 |
| 5.1.3    | Bounded Perturbation Theorem.....   | 148 |
| 5.2      | The Singularly Perturbed McKendrick Model with Geographic Structure.....  | 149 |
| 5.3      | Preliminary Properties of (5.14)–(5.16).....  | 151 |
| 5.3.1    | Spectral Properties of $\mathcal{C}$ .....  | 152 |
| 5.3.2    | Lifting Theorem.....  | 153 |

|          |   |            |
|----------|---|------------|
| 5.4      | Formal Asymptotic Expansion .....   | 155        |
| 5.4.1    | Projections of Operators .....  | 156        |
| 5.4.2    | Bulk Approximation .....  | 157        |
| 5.4.3    | Initial Layer .....   | 160        |
| 5.4.4    | Boundary Layer .....  | 162        |
| 5.4.5    | Corner Layer .....  | 164        |
| 5.5      | Numerical Illustration .....  | 170        |
| 5.5.1    | Computational Example .....   | 170        |
