Contents

1 Introduction 1

2 Introduction to Quantum Mechanics 5
- 2.1 Line, Band, and Continuous Spectra: Bohr's Atomic Theory 6
- 2.2 Wave-Particle Dualism and Wave Mechanics 11
  - 2.2.1 Rigid Rotors 14
  - 2.2.2 Harmonic Oscillator 17
  - 2.2.3 Anharmonic Oscillator 20
- 2.3 Exercise 24

3 Introduction to Statistical Mechanics 25
- 3.1 Bose, Boltzmann, and Fermi Statistics 29
- 3.2 Thermodynamic Properties 34
  - 3.2.1 Contribution of Translational Energy 38
  - 3.2.2 Contribution of Rotational and Vibrational Energy Forms 40
  - 3.2.3 Contribution of Electronic Energy 51
  - 3.2.4 Sample Calculations 53
- 3.3 Distribution of Energy Levels 54
- 3.4 Exercise 59

4 Radiative Properties of High Temperature Gases 61
- 4.1 Basic Concepts and Laws 61
- 4.2 Gas Radiation and Equation of Energy Transfer 71
- 4.3 Radiative Characteristics for Ionized Gases 95
- 4.4 Radiative Properties 109
  - 4.4.1 Propagation of Electromagnetic Waves in an Isotropic Media of Finite Conductivity 109
  - 4.4.2 Absorption and Scattering Coefficients of Particles 110
- 4.5 Radiation from Clouds of Particles 112
- 4.6 Evaluation of Radiation 116
  - 4.6.1 View Factor 120

4.7 Radiation Model 133
4.7.1 Rosseland Model 138
4.7.2 Optical Thin Model 139
4.7.3 Multi-Flux Model 140
4.7.4 Monte Carlo Model 142
4.7.5 Ray Tracing or DTRM Model 145
4.7.6 Discrete Ordinate Model 148
4.7.7 Discrete Transfer or Discrete Ordinate Model 156
4.7.8 P-N Model 160
4.7.9 Marshak Condition 180
4.7.10 Gray and Multiband Models 187
4.7.11 Greenhouse Effect 187
4.8 Solar Energy 187
4.9 Exercise 190

5 Collision Processes for High Temperature Gases 191
5.1 Dynamics of Binary Collision 191
5.2 Collision Cross Section 197
5.2.1 Collision Between Neutrals 197
5.2.2 Collision Between Electrons and Neutrals 202
5.2.3 Ion-Neutral Collision 203
5.2.4 Charged Particle Collision 208
5.3 Collision Frequency, Mean Free Path 209
5.4 Reaction Rates and Vibrational and Temperature Nonequilibrium 214
5.5 Exercise 224

6 Equilibrium Composition of a Reacting Gas Mixture 225
6.1 Vant' Hoff Model of Chemical Reaction 226
6.2 Heat of Reaction 229
6.3 Properties of Mixture of Gases 232
6.4 Equilibrium Composition of an Ideal Dissociating Diatomic Gas 233
6.5 Equilibrium Composition for a Multiple Component Gas 238
6.6 Equilibrium Composition for a Pure Monatomic Gas Plasma 244
6.7 Equilibrium Composition of a Multiple Temperature Gas Plasma 249
6.8 Temperature Derivatives of Equilibrium Gas Mixtures 254
6.9 Effect of Radiation 256
6.10 Exercise 258

7 Transport Properties of High Temperature Gases 259
7.1 Motion of a Singly Charged Particle in Electromagnetic Fields 259
7.2 Collision-Dominated Ionized Gas 265
7.3 Diffusion, Ambipolar Diffusion, and Mobility 269

7.4 Viscosity, Heat Conductivity, and Electrical Conductivity 276
7.5 Diffusion and Radiative Heat Conduction 282
7.6 Effect of Magnetic Field on the Transport Properties of Ionized Gases 285
7.7 Transport Properties of an Ideal Dissociating Gas 288
7.8 Exercise 290

8 Boundary Effects for High Temperature Gases 291
8.1 Emission of Electrons and Ions 291
8.2 One-Dimensional Sheath Effects 299
8.3 Heat Transfer 306

9 Production of High Temperature Gases 311
9.1 Thermodynamic Charts for Air Plasma 312
9.2 Isentropic Flow in a Nozzle 314
9.3 Gas State After a Shock 316
9.4 Vibrational Relaxation Effects in Gas Dynamics 320
9.5 Electrical Breakdown in Gases 324
9.6 High-Frequency Discharges 333

10 Diagnostic Techniques 337
10.1 Temperature Measurement—Probe Method 339
10.2 Temperature Measurement—Spectroscopical Methods 343
10.3 Temperature Measurement—Interferometric Methods 350
10.4 Velocity Measurement by Laser Doppler Velocimeter 353
10.5 Exercise 353

11 High Temperature Gas and Magnetogasdynamics 355
11.1 Basic Equations 355
11.2 Magneto- and Electromagneto-Gas-Dynamic Approximations 371
11.3 Wave Propagation 376
11.4 Small Perturbation of a Magnetogasdynamic Flow 381
11.5 Shocks in Magnetogasdynamics 383
11.6 Stability of 2D Ionized Gas Flow 393
11.6.1 Hartmann Problem 405
11.6.2 Numerical Procedure and Results 407

12 Some Practical Examples 411
12.1 Arc Plasma Flow in a Tube 411
12.2 Impinging Plasma Jet 417
12.3 Particle-Plasma Interaction 420
12.3.1 Drag and Heat Transfer 422
12.3.2 Internal Conduction 428
12.3.3 Low Pressure Effects 428
12.3.4 Particle Charging Effect 429
12.3.5 Fluctuating Velocity and Temperature 429

12.4 A Transverse Blown Arc 430
12.5 Magneto-Gas-Dynamic Flow Inside Ducts 434
12.6 MGD Power Generation or Gas Acceleration 437
12.7 Plasma Manufacturing and Processing 444
12.8 Weakly Ionized Plasma 446
12.9 MGD Power Generation Topping Gas-Dynamic Cycle 447
12.9.1 1D MGD Equation 447
12.9.2 Two Basic MGD Generators 452
12.10 Hall and Ion Thruster 456
12.10.1 Theory 458
12.10.2 Numerical Procedure and Results 461
12.10.3 Conclusion 465
12.10.4 Property Calculations 467
12.11 Faraday Generator: 3D Analysis 469
12.12 AJAX Project 473
12.13 Exercise 478

A Statistical Weights and Energy (cm^{-1}) for Selected Atoms and Molecules 479

B Enthalpy (MJ/kmol) for Different Gases (1 MJ = 1 Mega Joule) 493

C Entropy (MJ/kmol) for Different Gases (1 MJ = 1 Mega Joule) 495
