Contents

1 Introduction 1
1.1 Global Power Demand 1
1.2 Photocatalytic Water Splitting 3
References 6

2 The Hydrogen Evolution Reaction: Water Reduction Photocatalysis—Improved Niobate Nanoscroll Photocatalysts for Partial Water Splitting 9
2.1 Introduction 9
2.2 Results and Discussion 10
2.3 Conclusion 17
2.4 Experimental 18
2.5 Supporting Information 20
References 24

3 The Oxygen Evolution Reaction: Water Oxidation Photocatalysis—Photocatalytic Water Oxidation with Suspended alpha-Fe_2O_3 Particles—Effects of Nanoscaling 27
3.1 Introduction 27
3.2 Results and Discussion 28
3.3 Conclusion 35
3.4 Experimental 35
References 37

4 Overall Photocatalytic Water Splitting with Suspended NiO-$SrTiO_3$ Nanocrystals 39
4.1 Introduction 39
4.2 Results and Discussion 40
4.3 Conclusion 48
4.4 Experimental 48
References 50

5 Complete Water Splitting with Multi-Component Catalysts: Proposed Mechanism of Charge Transport in NiOx Loaded $SrTiO_3$ Photocatalyst for Complete Water Splitting 53
5.1 Introduction 53
5.2 Results and Discussion 54
5.3 Conclusion 63
5.4 Experimental 64
References 66

Curriculum Vitae of Troy K. Townsend 67
