

Contents

- 1 Wireless Body Area Network and Ultra-Wideband Communication** **1**
 - 1.1 Overview of Wireless Body Area Networks 2
 - 1.2 Physical Layer Wireless Technologies Used in WBAN Applications. 5
 - 1.2.1 Zigbee 6
 - 1.2.2 Wireless Local Area Networks 7
 - 1.2.3 Medical Implant Communication Services 7
 - 1.2.4 Bluetooth 8
 - 1.2.5 Ultra-Wideband 8
 - 1.3 IR-UWB WBAN System and Advantages. 10
 - 1.4 Comparison of Wireless Technologies Used for WBAN. 12
 - 1.5 Scope of the Book 15
 - References 16

- 2 MAC Protocols for UWB-Based WBAN Applications** **19**
 - 2.1 Introduction. 19
 - 2.2 The IEEE 802.15.6 Standard 20
 - 2.3 The IEEE 802.15.4a Standard 22
 - 2.4 PSMA-Based MAC 24
 - 2.5 MAC Protocol Based on Exclusion Regions 25
 - 2.6 UWB² 26
 - 2.7 U-MAC 27
 - 2.8 DCC-MAC 28
 - 2.9 Multiband MAC for IR-UWB 29
 - 2.10 Pulsers 30
 - 2.11 Transmit-only MAC 31
 - 2.12 Comparison of UWB-Based MAC Protocols for WBAN Applications 32
 - 2.13 Conclusion 34
 - References 35

3	Design and Simulation of a MAC Protocol for WBAN Communication Scenarios	37
3.1	Introduction	37
3.2	Simulation Models	39
3.2.1	IR-UWB Pulse Generation	39
3.2.2	Propagation Channel Model	40
3.3	Cross Layer Design	43
3.3.1	Transmission Power Regulations of the Gated UWB Pulse Transmission	44
3.3.2	BER Analysis of Multiple PPB Scheme	45
3.3.3	Determination of Pulses Per Bit Values by Parent Node	48
3.3.4	Super Frame Structure	50
3.3.5	Medium Access Control Algorithm	53
3.4	Simulation Scenarios and Performance Parameters	53
3.4.1	Network Topologies and Interference Model	54
3.4.2	Transmit Power Allocation	56
3.4.3	Performance Parameters	56
3.5	Simulation Results	57
3.5.1	Packet Loss Ratio	58
3.5.2	Average Packet Acknowledgement Delay	58
3.5.3	Percentage Throughput	59
3.5.4	Energy Consumption	60
3.5.5	Comparison of Some Existing MAC Protocols	61
3.6	Conclusion	64
	References	64
4	Hardware Architectures for IR-UWB-Based Transceivers	67
4.1	Introduction	67
4.2	UWB Transmitter Design Techniques	68
4.2.1	Base Band UWB Pulse Generators	69
4.2.2	Up-Conversion-Based UWB Pulse Generators	69
4.2.3	Waveform Synthesis (Pulse Shaping) Techniques for UWB Pulse Generators	71
4.3	UWB Receiver Design Techniques	73
4.3.1	Non-Coherent UWB Receivers	73
4.3.2	Coherent UWB Receivers	75
4.4	UWB Sensor Node Designs	75
4.5	Conclusion	79
	References	79

5	An Ultra-Wideband Sensor Node Development with Dual-Frequency Band for Medical Signal Monitoring	83
5.1	Introduction.	83
5.2	Dual Band Sensor Node Design: Employing a Narrow-Band Receiver in the Sensor Node	85
5.2.1	Pulse Generation Techniques.	86
5.2.2	Analysis of UWB Pulse Properties.	88
5.2.3	Implementation of the Pulse Generator.	94
5.2.4	IR-UWB RF Section	97
5.2.5	The 433 MHz ISM Band Receiver.	99
5.2.6	Micro-controller.	100
5.2.7	Analog Front-End	102
5.2.8	Power Supply Management.	102
5.2.9	Sensor Node Integration and Design Considerations. . .	103
5.2.10	Comparison.	104
5.3	Implementation of the Coordinator Node	105
5.3.1	IR-UWB Receiver Front-End	108
5.3.2	Narrow Band Transmitter	110
5.3.3	Sampling and Data Processing Unit	113
5.4	Conclusion	113
	References	114
6	System Implementation and Evaluation of an Energy Efficient UWB-Based MAC Protocol for Wireless Body Area Networks . .	117
6.1	Introduction.	117
6.2	Development of Packet Structure.	118
6.3	Cross Layer MAC Protocol Implementation at Sensor Node . .	120
6.4	Cross Layer MAC Protocol Implementation at the Coordinator Node	120
6.4.1	Pulse Synchronization for IR-UWB WBAN Communication	120
6.4.2	Packet Synchronization and Bit Detection.	125
6.4.3	BER Performance Control Using and the Feedback in the Network for Reliable Data Communication	126
6.5	A WBAN Implementation: Multi Sensor ECG and Temperature Monitoring System	127
6.6	On-Body Evaluation of the Dual-Band WBAN Communication System	130
6.6.1	BER Performance Analysis.	130
6.6.2	Initialization Delay of Sensor Nodes	136
6.7	Power Consumption of Dual-Band Sensor Nodes in WBAN Operation.	139
6.8	Conclusion	143
	References	144

7	Electromagnetic Effects of IR-UWB Implant Communication	145
7.1	Introduction.	145
7.2	Simulation Models and Methods	148
7.2.1	Effect of Human Tissue Properties on SAR	148
7.2.2	SAR Calculation Method	151
7.2.3	Temperature Variation Based on Bio Heat Model	152
7.3	Case Study I: Electromagnetic Effects of IR-UWB Signals for Wireless Capsule Endoscopy Applications	153
7.3.1	Antenna Model and WCE Device Positioning	153
7.3.2	SAR, SA Variations due to the Operation of IR-UWB-Based WCE Devices.	157
7.3.3	Temperature Variation Caused by IR-UWB-Based WCE Devices	158
7.4	Case Study II: Electromagnetic Effects Caused by IR-UWB Signals Used in Head Implant Applications	160
7.4.1	Head Implantable Antenna Model and Impedance Matching	160
7.4.2	SAR Variation for Different Signal Power Levels	161
7.4.3	SAR Variation in Different Tissue Materials in the Human Head	163
7.4.4	Temperature Variation due to the Operation of IR-UWB-Based Head Implants	164
7.5	Conclusion	166
