1	Interaction Between Nuclei and Electrons	
	and Their Interaction with External Electromagnetic Fields.	1
1.1	Basic Information on Electronic and Nuclear Momenta.	1
1.1.1	The Quantum-Mechanical Description of the Properties of Angular Momentum	1
1.1.2	The Magnetic Dipole Moments of Electrons and Nuclei	3
1.1.3	The Quadrupole Moment of a Nucleus	5
1.2	The Phenomenon of Magnetic Resonance	10
1.3	Macroscopic Spin Magnetization	13
1.4	Achievement of Equilibrium Spin Magnetization: The Relaxation Times	15
1.4.1	Achievement of Stationary State of the Longitudinal Component of Magnetization	15
1.4.2	Achievement of Equilibrium Transverse Component of Magnetization.	19
1.5	Bloch's Phenomenological Theory	20
1.6	Absorption and Dispersion as Parameters of Magnetization Components: The Phenomenon of Saturation	26
1.7	The Shape and Moments of the Spectral Line of Magnetic Resonance	30
1.7.1	A Formal Description of the Line Shape in Terms of Moments	30
1.7.2	Homogeneous and Inhomogeneous Broadening of Magnetic Resonance Lines.	32
1.8	Calculation of Response of a Spin System to Impact of Pulsed Radiofrequency Fields.	33
1.8.1	The Motion of a Nuclear Magnetization Vector in the Absence of Relaxation	33
1.8.2	Free Spin Precession	36
1.8.3	Formation of Echo Signals.	39
1.8.4	Free Precession and Spin Echo with an Infinitely Wide Spectrum.	44
1.8.5	The Single-Pulse Echo	53

1.9	Spin Hamiltonian: Density Matrix Formalism	56
1.9.1	Spin Hamiltonian	56
1.9.2	Density Matrix	58
1.10	Magnetic Dipole–Dipole Interactions	61
1.10.1	Hamiltonian of Dipole–Dipole Interactions	61
1.10.2	Energy Levels for an Isolated Pair of Nuclei	65
1.11	Electron–Nucleus Interactions	71
1.11.1	Interaction of the Nucleus with the Orbital Motion of the Electron	71
1.11.2	Direct Dipole–Dipole Interactions	73
1.11.3	Contact Interaction	74
1.11.4	Electronic Magnetic Shielding	76
1.11.5	Indirect Spin–Spin Interactions	79
1.12	Electric Quadrupole Interactions	80

Part I Nuclear Magnetic Resonance (NMR)

2	Basic Principles of Detection of Nuclear Magnetic Resonance . . .	93
2.1	Nuclear Magnetic Resonance in Molecular and Atomic Beams	93
2.2	The Sources of Magnetic Fields	96
2.3	The Stationary Methods of Observation of Nuclear Magnetic Resonance	100
2.3.1	Spin Detector	101
2.3.2	Passage Through Resonance	106
2.4	Pulse Methods of NMR Observation	108
2.4.1	The Action of the 90-degree Pulse	108
2.4.2	The Amplitude of Signal of the Free Induction	110
2.4.3	Principles of Fourier Transform in Nuclear Magnetic Resonance	113
2.5	Measurement of Relaxation Times	124
2.5.1	The Measurement of the Spin–Lattice Relaxation Time	125
2.5.2	The Measurement of Spin–Spin Relaxation Time . . .	130
2.5.3	The Selective Measurement of the Relaxation Time T_1 and T_2	134
2.6	The Measurement of Coefficients Translational Diffusion . .	135
2.7	Spin Echo in a Three-Pulse Sequence	138
2.8	Processing of Information by Means of Spin Echo	139
2.9	Radiation Damping: The Interaction of Precessing Nuclear Macroscopic Magnetization with Radio-Frequency Circuit. . .	141

2.10	Magnetic Resonance Imaging.	147
2.10.1	The Obtaining of Spin Images from NMR Induction Signals in Inhomogeneous Field	147
2.10.2	Methods of Selective Irradiation.	155
2.10.3	Versions of the Basic Methods of Formation of NMR Imaging	156
2.10.4	Contrast Enhancement in MRI	158
2.10.5	Application of MRI.	161
	Further Readings	162
3	Nuclear Magnetic Relaxation	163
3.1	Probability Relaxation Transitions	163
3.2	Two-Level System: Relaxation, the Spin Temperature	169
3.3	Multi-level System: Spin–Lattice Relaxation	172
3.4	Preliminary Remarks to the Theory of Redfield	176
3.5	Basic Equation in the Theory of Redfield	178
3.6	Fluctuations of the Magnetic Field (General Consideration).	184
3.7	The Influence of Fluctuations of the Magnetic Field on the NMR-Relaxation.	193
3.7.1	Effect of Anisotropy of the Electron Shielding.	193
3.7.2	Effect of Spin-Rotational Interaction.	195
3.8	Magnetic Dipole–Dipole Relaxation	198
3.9	Relaxation due to Dipole–Dipole Interaction of Two Equivalent Spins	199
3.10	Relaxation due to Dipole–Dipole Interaction of Two Non-equivalent Spins.	208
3.11	Scalar Relaxation	210
3.12	The Quadrupole Relaxation	212
3.13	Relaxation in Conditions of Heterogeneity of a System and Superposition of Different Interactions	217
3.14	Relaxation in a Rotating Coordinate Frame	219
	Further Readings	223
4	Nuclear Magnetic Resonance in Liquids	225
4.1	Preliminary Remarks on Calculation of NMR Spectra.	226
4.1.1	Calculation of Chemical Shift Tensor and Constants of J -Couplings.	226
4.1.2	Spin Hamiltonian in Liquids	228
4.1.3	Spectral Line Shape	233
4.1.4	Spectra Designation. Magnetically Equivalent Spins.	234

4.2	Calculation of NMR Spectra	235
4.2.1	Analytical and Numerical Calculations, Symmetry of Spin System	235
4.2.2	Spectrum A_p of a System of p Magnetically Equivalent Spins	237
4.2.3	First-Order Spectrum of a System A_pX_q	238
4.2.4	Spectrum of a System AB	240
4.2.5	Spectrum of a System ABX	243
4.3	Dynamic Effects in the NMR Spectra	244
4.3.1	Exchange Between Two States	244
4.3.2	Exchange Between Multiple States	248
4.3.3	Effect of Chemical Exchange on J -Coupling	249
4.4	NMR-Relaxation in Liquids	251
4.4.1	Separation of the Inter- and Intramolecular Contributions to the Dipole–Dipole Relaxation	252
4.4.2	Pure Liquids and Their Mixtures	253
4.4.3	Diamagnetic Electrolyte Solutions	258
4.4.4	Paramagnetic Electrolyte Solutions	265
4.4.5	Heterogeneous Systems	269
	Further Readings	272
5	Nuclear Magnetic Resonance in Diamagnetic Solids	273
5.1	Effect of Dipole–Dipole Interactions on NMR Spectra in Solids	275
5.1.1	NMR Spectrum of an Isolated Spin Pair of Different Magnetic Species	275
5.1.2	NMR Spectrum of an Isolated Spin Pair of Equivalent Magnetic Species	278
5.2	Determination of Structural Parameters by NMR	280
5.3	The van Vleck Method	284
5.3.1	Calculation of the Second Moment of a Spectral Line	284
5.3.2	Experimental Determination of the Second Moment	287
5.3.3	Shape and Second Moment of a Spectral Line in the Presence of Molecular Motion	288
5.4	Influence of Quadrupole Interactions on NMR Spectra	291
5.5	Determination of the EFG Tensor by NMR	299
5.5.1	The Volkoff Method	300
5.5.2	The Method of the Single Rotation	303
5.6	NMR Line Shape in Polycrystals	308

5.7	High Resolution NMR in Solids	311
5.7.1	NMR Line Narrowing by Magic Angle Spinning . . .	311
5.7.2	NMR Line Narrowing by Pulse Sequences	313
5.7.3	Exponential Operators	317
5.7.4	Quantum-Mechanical Analogue of the Rotating Frame	319
5.7.5	Hamiltonian of Internal Interactions in the Rotating Frame: The Average Hamiltonian Method	321
5.7.6	Arbitrary Periodic Action on a Spin System.	329
5.7.7	WHH-4 Pulse Sequence.	331
5.7.8	MREV-8 Pulse Sequence.	334
5.8	Relaxation in Diamagnetic Solids: Role of Slow Motions . .	335
	Further Readings	346
6	Nuclear Magnetic Resonance in Liquid Crystals	347
6.1	Structure and Properties of Liquid Crystals	347
6.2	Spin Hamiltonian in Liquid Crystals	350
6.2.1	Dipole–Dipole Interactions.	350
6.2.2	Quadrupolar Interactions	352
6.2.3	Chemical Shifts	353
6.3	NMR Spectroscopy of Liquid Crystals	354
6.4	Relaxation in Liquid Crystals.	356
	Further Readings	361
7	Nuclear Magnetic Resonance in Magnetic Materials	363
7.1	Magnetism and Magnetically Ordered Materials.	363
7.1.1	Exchange Interactions	364
7.1.2	Types of Magnetism	366
7.1.3	Magnetic Crystallographic Anisotropy and Domains	369
7.2	Local Fields.	370
7.3	Mechanisms of the rf Field Enhancement in Domains.	374
7.4	Influence of Constant and Alternating Magnetic Fields on an Antiferromagnet.	378
7.5	Mechanisms of the rf Field Enhancement in Domain Walls	382
7.6	Influence of the Enhancement Factor Dispersion on NMR Signals.	386
7.6.1	Formation of Free Precession and Spin Echo Signals.	386
7.6.2	Distribution Function of Nuclei Over Enhancement Factors	391

7.7	Infinitely Broad NMR Spectrum.	393
7.7.1	Free Precession.	394
7.7.2	Spin Echo	396
7.8	Coupled Electron–Nucleus System	400
7.8.1	Eigenfrequencies of the Electron System.	400
7.8.2	Behavior of the Nuclear Magnetization Vector.	404
	Further Readings	412

Part II Nuclear Quadrupole Resonance (NQR)

8	Nuclear Quadrupole Resonance	415
8.1	Theory of Nuclear Quadrupole Resonance.	416
8.1.1	Energy Levels, Frequencies and Intensities of NQR Transitions.	416
8.1.2	Exact Solution of the Secular Equation for $I = 1$ and $I = 3/2$	418
8.1.3	NQR in the Presence of Magnetic Field	426
8.2	Temperature Dependence of NQR Frequencies.	432
8.2.1	Rotatory Oscillation Motion.	433
8.2.2	Translation Vibrations.	437
8.2.3	Anomalous Temperature Dependence of the NQR Frequency	441
8.3	Quadrupole Relaxation in Solids.	442
8.4	Methods of Calculations of NQR Spectral Parameters.	450
8.4.1	Townes–Dailey Method.	450
8.4.2	Determination of Chemical Bond Parameters from NQR Spectra	456
8.4.3	Correlation Equations for NQR Frequencies.	460
8.4.4	Ab initio Methods: Basis and Applications to NQR	463
8.4.5	Semi-empirical Mulliken–Wolfsberg–Helmholtz method	474
8.4.6	Point-Multipole Model	477
	Further Readings	479
9	Experimental Methods in NQR.	481
9.1	Peculiarities of NQR Spectra Registration	481
9.2	Physical Bases of Pulse NQR.	484
9.3	NQR Free Induction	487
9.3.1	Formation of the Free Induction for $I = 3/2$ at $\eta = 0$	488
9.3.2	Formation of the Free Induction Signal for $I = 1$ and $\eta \neq 0$	498

9.4	NQR Spin Echo	502
9.4.1	Echo Signal Formation for $I = 3/2$ and $\eta = 0$	504
9.4.2	Free Induction and Echo in a Weak Magnetic Field	507
9.5	Two-Frequency NQR Spin Echo	510
9.6	Multipulse Line Narrowing Sequences in NQR	514
9.7	Detection of Drags and Explosives (Illicit Substances) by NQR	520
	Further Readings	522

Part III Electron Paramagnetic Resonance (EPR)

10	Basic Interactions of an Electron in Solids.	525
10.1	Crystal Electrostatic Field Model	526
10.1.1	Van Vleck Assumptions of the Model.	526
10.1.2	Perturbation of Free Atom or Ion by Crystal Field	527
10.1.3	Different Realization of the Crystal Field Model	528
10.2	Elements of Atom Theory	530
10.2.1	General Quasi-Relativistic Hamiltonian of an Electron	530
10.2.2	Electron in the Central Electric Field	531
10.2.3	Interaction with Magnetic Field and Spin-Orbital Interaction	535
10.2.4	Many-Electron Atom: Spherically Symmetric Self-Consistence Field	536
10.2.5	Many-Electron Atom: Correlation Interaction.	538
10.2.6	Spin-Orbital Interaction in a Many-Electron Atom	539
10.3	Selected Information on the Group Theory	540
10.3.1	Elements and Transformations of Symmetry	540
10.3.2	Group Representation	543
10.3.3	Basic Theorems	547
10.3.4	Application of the Group Theory to Electron Paramagnetic Resonance Problems	549
	Further Readings	554
11	Energy Levels of Paramagnetic Center in Crystal Field.	555
11.1	Qualitative Approach	555
11.2	Analytical Expression for the Potential of Crystal Field	557

11.3	Energy Levels of Paramagnetic Center in Crystal Field.	564
11.3.1	Case of Strong Field	564
11.3.2	Splitting of Terms of Configurations np^k and nd^k in a Intermediate Crystal Field	570
11.3.3	Paramagnetic Center in a Weak Crystal Field	572
	Further Readings	577
12	Covalent-Coupled Paramagnetic Complexes	579
12.1	Essentials of Covalent Bond Model	579
12.2	Formation of Molecular Orbitals in the Paramagnetic Complexes	583
12.3	Determination of Combinations of Ligand Orbitals Transformed According to Irreducible Representation of the Symmetry Group of the Complex	584
12.4	Energy Levels of the Octahedral Complex.	590
12.5	Magnetic Properties of Complexes	592
	Further Readings	595
13	Fine Structure of EPR Spectra in Solids	597
13.1	Crystal Field Effects on EPR Spectra	597
13.1.1	Spin Hamiltonian Method for Singlet State in Crystal Field.	597
13.1.2	Spin Hamiltonian in the Case of Axial Symmetry. . .	602
13.1.3	Relation Between Characteristics of Crystal Field and Parameters of Spin Hamiltonian.	604
13.1.4	Anisotropy of EPR Spectra	606
13.2	Examples of EPR Spectra	608
13.2.1	EPR Frequencies of the Ion Ni^{2+} in an Intermediate Crystal Field	608
13.2.2	Relative Intensities of Lines of EPR Spectrum of Ni^{2+}	609
13.2.3	Magnetic Levels of the Ion Cr^{3+} in the Intermediate Crystal Field	616
13.2.4	Application of Spin-Hamiltonian Method to Calculation of EPR Spectra of Molecules in Triplet State	617
13.2.5	The Case of Degeneration of Ground Level for the Intermediate and Weak Crystal Fields.	620
	Further Readings	622

14 Electron-Nuclear Interactions and Hyperfine Structure of EPR Spectra	623
14.1 Spin Hamiltonian in the Presence of Hyperfine Interactions	623
14.2 Isotropic Hyperfine Interactions	625
14.2.1 Isotropic Hyperfine Spin Hamiltonian	625
14.2.2 Breit-Raby Formula and Hyperfine Structure of EPR Spectra	626
14.2.3 Energy Levels and Selection Rules in Weak Magnetic Field	627
14.2.4 EPR Spectroscopy of Free Radicals	627
Further Readings	633

Part IV Double Resonances and Polarization Transfer

15 Double Resonances	637
15.1 Preliminary Remarks	637
15.2 Overhauser Effect	640
15.3 Variants of Pulse Double Resonances	642
15.3.1 Double Resonance Spin Echo	642
15.3.2 An Indirect Method for Detecting Nuclear Magnetic Resonance on the Basis of Cross-Relaxation Effects in Double Resonances	643
15.3.3 A Direct Method for Recording the NMR Signals	646
15.4 Double Nuclear Quadrupole Resonances	649
15.4.1 Spin-Echo Double Nuclear Quadrupole Resonance	651
15.4.2 Stationary Double Nuclear Quadrupole Resonance in the Rotating Frame	652
15.4.3 Double NMR-NQR in High Magnetic Field	654
15.4.4 Double NMR-NQR in Zero Magnetic Field	654
15.4.5 Double NMR-NQR in Low Magnetic Field	655
16 Two-Dimensional NMR Fourier Spectroscopy	657
16.1 Essence of Multidimensional NMR-Spectroscopy	657
16.2 Two-Dimensional Spectroscopy: Obtaining and Interpretation of 2D-Spectra	659
16.3 <i>J</i> -Spectroscopy: Separation of Electronic Shielding and Scalar Interaction Effects	660
16.3.1 Correlation 2D-Spectroscopy (COSY): Identification of Groups of the Nuclei Connected by Interactions	663

16.3.2	2D-Spectroscopy on the Basis of Nuclear Overhauser Effect (NOESY)	669
16.3.3	Two-Dimensional Exchange Spectroscopy (EXSY and ROESY).	669
16.3.4	Multiquantum Spectroscopy: The Basic Concepts. . .	670
16.3.5	Conclusive Remarks	672
	Further Readings	673

Part V Quantum Radiofrequency Electronics (Radioelectronics)

17	Basic Physical Ideas of Quantum Radioelectronics.	677
17.1	Quantum Amplification of Electromagnetic Fields	677
17.2	Calculation of Probabilities of Quantum Transitions	680
17.3	General Causes of Broadening of Spectral Lines	684
17.3.1	The Natural Line Width	685
17.3.2	The Broadening of Spectral Lines Due to the Interaction of Microparticles with Electromagnetic Fields.	686
17.4	Frequency Stabilization with a Quantum Generator.	687
17.5	Frequency Standards with a Quantum Discriminator.	689
	Further Readings	691
18	Quantum Generators with Molecular and Atomic Beams.	693
18.1	Selection Over Energy States of Molecules and Atoms Moving in Inhomogeneous Fields.	693
18.2	Rotational-Inversional Spectra of Molecules.	695
18.3	Generator with a Beam of the Ammonia Molecules	700
18.4	The Equation Describing the Work of a Molecular Generator.	704
18.5	The Stability of the Frequency of the Quantum Generator with a Beam of Ammonia Molecules	707
18.5.1	The Influence of the Spectral Line Width	707
18.5.2	The Influence of Thermal Noise.	709
18.5.3	The Influence of the Doppler Effect	710
18.5.4	The Influence of Intramolecular Interactions	711
18.6	The Spectral Transition Used in the Hydrogen Maser	712
18.7	The Arrangement of the Generator with the Beam of Hydrogen Atoms	714
18.8	The Width of Spectral Lines of Hydrogen Atoms in the Accumulative Bulb and Causes of the Instability of the Hydrogen Generator Frequency.	716
18.9	Cesium Standard of Frequency and Time	718

18.10	A Comparative Analysis of Different Quantum Standards of Time and Frequency with Beams of Atoms and Molecules	721
	Further Readings	723
19	Quantum Amplifiers Based on Electron	
	Paramagnetic Resonance	725
19.1	Magnetic Quality Factor	725
19.2	The Use of Auxiliary Radiation	727
19.3	Resonator Quantum Amplifiers.	729
19.4	Quantum Amplifiers with Traveling Wave.	730
19.5	Noises of Quantum Amplifiers.	733
19.6	Some Design Features of Quantum Amplifiers on EPR.	736
	Further Readings	738
20	The Use of Optical Radiation in Quantum	
	Radioelectronics Devices	739
20.1	The Use of Optical Pumping to Increase the Intensity of a Spectral Line at Radiofrequency	739
20.2	The Quantum Standard of Time and Frequency With the Rubidium Vapor	741
	Further Readings	743
21	Magnetic Resonance Quantum Magnetometry	745
21.1	The Method of Free Nuclear Induction in the Magnetic Field of the Earth	745
21.2	Parameters of the Free Induction Signal in Weak Fields	746
21.2.1	The Signal-to-Noise Ratio	746
21.2.2	The Shape of the Free Induction Signal in a Inhomogeneous Field	747
21.2.3	The Reaction of a Resonant Receiver Circuit (Coil Reaction or Radiation Damping)	749
21.3	The Influence of Fluid Flow on the NMR Signals	751
21.4	Dynamic Nuclear Polarization in a Weak Magnetic Field	753
21.5	Generators on the Nuclear Magnetic Resonance	757
21.5.1	Schmelzer Generator	757
21.5.2	NMR Generator with a Moving Fluid	759
21.6	Principles of the Design of Proton Geomagnitometers.	761
21.6.1	Spin Detectors of Free Nuclear Induction	761
21.6.2	The Pre-polarization with an Auxiliary Field	761
21.6.3	Registration of Nuclear Induction Signal	763

21.7	Optical Polarization in Quantum Magnetometry	765
21.8	Some Applications of Quantum Magnetometers	770
	Further Readings	771
Appendix A: Symbols and Abbreviations		773
Index		779

Magnetic Resonance and Its Applications

Chizhik, V.I.; Chernyshev, Y.S.; Donets, A.V.; Frolov, V.;

Komolkin, A.; Shelyapina, M.G.
