

Contents

1	Basic Review and Elementary Facts	1
1.1	Why Study Inequalities?	1
1.2	Quick Review of the Basics	9
1.3	Triangle Inequality for Real Numbers	12
1.4	Simple Inequalities for Real Functions of One Variable	13
1.5	Complex Numbers and Some Complex Functions	17
1.6	Vectors in $\mathbb{R}^n$ and Associated Inequalities	20
1.7	Some Techniques for Establishing Inequalities	23
1.8	Problems	28
2	Methods from the Calculus	33
2.1	Introduction	33
2.2	Limits and Continuity	33
2.3	Basic Results for Integrals	37
2.4	Results from the Differential Calculus	40
2.5	Problems	47
3	Some Standard Inequalities	53
3.1	Introduction	53
3.2	Bernoulli's Inequality	53
3.3	Young's Inequality	54
3.4	Inequality of the Means	54
3.5	Hölder's Inequality	56
3.6	Minkowski's Inequality	59
3.7	Cauchy–Schwarz Inequality	60
3.8	Chebyshev's Inequality	63
3.9	Jensen's Inequality	65
3.10	Friedrichs- and Poincaré-Type Inequalities	67
3.11	Problems	69

4	Inequalities in Abstract Spaces	75
4.1	Introduction	75
4.2	Vectors and Norms	75
4.3	Metric Spaces	79
4.4	Linear Spaces	85
4.5	Operators	96
4.6	Problems	99
5	Some Applications	101
5.1	Introduction	101
5.2	Estimation of Integrals	101
5.3	The o and O Symbols	102
5.4	Series Expansions	104
5.5	Simpson's Rule	107
5.6	Taylor's Method	110
5.7	Special Functions of Mathematical Physics	113
5.8	A Projectile Problem	119
5.9	Geometric Shapes	121
5.10	Electrostatic Fields and Capacitance	124
5.11	Applications to Matrices	129
5.12	Topics in Signal Analysis	136
5.13	Dynamical System Stability and Control	139
5.14	Some Inequalities of Probability	146
5.15	Applications in Communication Systems	149
5.16	Existence of Solutions	152
5.17	A Duality Theorem and Cost Minimization	157
5.18	Problems	159
6	Inequalities for Differential Equations	163
6.1	Chaplygin's Theorem	163
6.2	Gronwall's Inequality	164
6.3	On Poisson's Equation	166
6.4	Membrane with Fixed Edge	167
6.5	Theory of Linear Elasticity	169
6.6	Theory of Elastic Plates	173
6.7	On the Weak Setup of Linear Mechanics Problems	174
6.8	Problems	177
7	A Brief Introduction to Interval Analysis	179
7.1	Introduction	179
7.2	The Interval Number System	180
7.3	Outward Rounding for Rigorous Containment of Solutions	182
7.4	Interval Extensions of Real-Valued Functions	182
7.5	A Few Techniques of Interval Analysis	186

7.6 Further Reading	192
7.7 Problems	193
Appendix A: Hints for Selected Problems	195
References	231
Index	235

Inequalities

With Applications to Engineering

Cloud, M.J.; Drachman, B.C.; Lebedev, L.P.

2014, XIII, 239 p. 30 illus., Hardcover

ISBN: 978-3-319-05310-3
