Part I Optimization Methods

1	Trajectory Optimization: A Survey	3
	Anil V. Rao	
1.1	Introduction	3
1.2	Trajectory Optimization Problem	4
1.3	Numerical Methods for Trajectory Optimization.	5
1.4	Numerical Solution of Differential Equations.	6
	1.4.1 Collocation	7
	1.4.2 Integration of Functions	8
1.5	Nonlinear Optimization	9
1.6	Methods for Solving Trajectory Optimization Problems	9
	1.6.1 Indirect Methods	10
	1.6.2 Direct Methods	13
1.7	Software for Solving Trajectory Optimization Problems	15
1.8	Choosing a Method.	16
1.9	Applications to Automotive Systems.	17
1.10	Conclusions	17
	References	18
2	Extremum Seeking Methods for Online Automotive Calibration	23
	Chris Manzie, Will Moase, Rohan Shekhar, Alireza Mohammadi, Dragan Nesic and Ying Tan	
2.1	Introduction	23
2.2	Review of Extremum Seeking	26
	2.2.1 Black-Box Extremum Seeking	27
	2.2.2 Grey-Box Extremum Seeking.	29
	2.2.3 Sampled Data Approaches.	30
2.3	Application to Automotive Engine Calibration.	31
2.4	Incorporation of Constraints.	36
2.5	Summary and Future Opportunities.	37
	References	37

3	Model Predictive Control of Autonomous Vehicles	41
	Mario Zanon, Janick V. Frasch, Milan Vukov, Sebastian Sager and Moritz Diehl	
3.1	Introduction	41
3.2	Control and Estimation Problems	42
3.2.1	Nonlinear Model Predictive Control	42
3.2.2	Moving Horizon Estimation	43
3.3	Efficient Algorithms for fast NMPC and MHE	44
3.3.1	Online Solution of the Dynamic Optimization Problem	44
3.3.2	Fast Solvers Based on Automatic Code Generation	45
3.4	Vehicle Model	46
3.4.1	Chassis Dynamics	46
3.4.2	Tire Contact Forces: Pacejka's Magic Formula	47
3.4.3	Wheel Dynamics	48
3.4.4	Vertical Forces and Suspension Model	48
3.4.5	Spatial Reformulation of the Dynamics	49
3.5	Control of Autonomous Vehicles	50
3.5.1	MHE Formulation	50
3.5.2	MPC Formulation	51
3.5.3	Simulation Results	53
3.5.4	Treating Gear Shifts	54
3.6	Conclusions and Outlook	55
	References	55
4	Approximate Solution of HJBE and Optimal Control in Internal Combustion Engines	59
	Mario Sassano and Alessandro Astolfi	
4.1	Introduction	59
4.2	Hamilton-Jacobi-Bellman Equation and Optimal Control	60
4.3	Dynamic Value Function and Algebraic \bar{P} Solution	61
4.3.1	Definition of Dynamic Value Function	62
4.3.2	A Class of Canonical Dynamic Value Functions	64
4.3.3	Minimization of the Extended Cost	66
4.4	Optimal Control in Internal Combustion Engine Test Benches	68
4.5	Conclusions	72
	References	73

Part II Inter and Intra Vehicle System Optimization

5	Intelligent Speed Advising Based on Cooperative Traffic Scenario Determination	77
	Rodrigo H. Ordóñez-Hurtado, Wynita M. Griggs, Kay Massow and Robert N. Shorten	
5.1	Introduction	77
5.2	Intelligent Speed Adaptation System	78
5.3	Procedure	79
5.4	Methodology: First Stage	80
5.4.1	Selection of the Next Point of Interest and the Next Vehicle	80
5.4.2	Vehicular Density Estimation	81
5.4.3	Traffic Scenario Determination	81
5.5	Methodology: Second Stage	84
5.5.1	Updating Speed in Virtual Next Vehicles	84
5.5.2	Proposed Recommended Speed Scheme	85
5.5.3	Proposed Recommended Distance Scheme	86
5.6	Validation	87
5.6.1	Traffic Scenario Determination	88
5.6.2	Recommended Speed	90
5.6.3	Recommended Distance	91
5.7	Conclusions and Future Work	91
	References	92
6	Driver Control and Trajectory Optimization Applied to Lane Change Maneuver	93
	Patrick J. McNally	
6.1	Background	93
6.1.1	Experiential Engineering	94
6.1.2	Lane Change Problem	94
6.2	Model Based Engineering Environment for Objective Evaluation	95
6.2.1	Determination of Driver Controls	95
6.2.2	Optimization Problem	97
6.2.3	Offline Optimization Results	99
6.3	Virtual Prototyping Environment for Subjective Evaluation	100
6.3.1	Driver Maneuvers in a Controlled Experiment	102
6.4	Driving Simulator Results (Online)	104
6.4.1	Imposing Constraints on Simulated Driver Controls	104
6.5	Conclusions	105
	References	107

7	Real-Time Near-Optimal Feedback Control of Aggressive Vehicle Maneuvers	109
	Panagiotis Tsiotras and Ricardo Sanz Diaz	
7.1	Introduction	109
7.2	Aggressive Yaw Maneuver of a Speeding Vehicle	112
7.2.1	Problem Statement	112
7.2.2	Vehicle and Tire Model	113
7.2.3	Optimal Control Formulation	116
7.3	Statistical Interpolation Using Gaussian Processes	118
7.3.1	Basic Theory	118
7.3.2	Choice of Correlation Functions	121
7.4	Application to On-line Aggressive Vehicle Maneuver Generation	122
7.4.1	Feedback Controller Synthesis	122
7.4.2	Numerical Results	125
7.5	Conclusions	125
	References	127
8	Applications of Computational Optimal Control to Vehicle Dynamics	131
	Joško Deur, Mirko Corić, Josip Kasać, Francis Assadian and Davor Hrovat	
8.1	Introduction	131
8.2	Overview of Previous Optimization and Assessment Results	132
8.2.1	Optimization Algorithm.	132
8.2.2	Vehicle Model	133
8.2.3	Formulation of Optimization Problem	135
8.2.4	Optimization and Assessment Results	136
8.3	Detailed Optimization for Active Steering Configurations	139
8.3.1	Optimization Algorithm.	139
8.3.2	Active Rear Steering (ARS).	139
8.3.3	Active Front Steering (AFS)	142
8.3.4	Four Wheel Steering (4WS = ARS & AFS).	143
8.4	Conclusion.	144
	References	145
9	Stochastic Fuel Efficient Optimal Control of Vehicle Speed	147
	Kevin McDonough, Ilya Kolmanovsky, Dimitar Filev, Steve Szwabowski, Diana Yanakiev and John Micheline	
9.1	Introduction	147
9.2	Modeling for SDP Policy Generation	148
9.2.1	Longitudinal Vehicle Dynamics	149
9.2.2	Stochastic Models of Reference Speed and Road Grade	150
9.2.3	Cost Function Constituents	151

9.3	Stochastic Dynamic Programming	154
9.4	Simulation Case Studies	154
9.4.1	In-traffic Driving	155
9.4.2	Optimal Vehicle Following	157
9.5	Vehicle Experiments	159
9.6	Concluding Remarks	160
	References	161
10	Predictive Cooperative Adaptive Cruise Control:	
	Fuel Consumption Benefits and Implementability	163
	Dominik Lang, Thomas Stanger, Roman Schmied and Luigi del Re	
10.1	Introduction	164
10.2	Problem Statement	164
10.2.1	Casting the Problem into the Mathematical Form	165
10.3	Assessment of Potential	167
10.4	Nonlinear Receding Horizon Optimization	168
10.5	Approximate Control Law Within the Linear MPC Framework	169
10.6	Approximate Control Law Utilizing an Identified Hammerstein–Wiener Model	171
10.7	Traffic Prediction Model From Data	174
10.8	Conclusions and Outlook	177
	References	177
Part III	Powertrain Optimization	
11	Topology Optimization of Hybrid Power Trains	181
	Theo Hofman and Maarten Steinbuch	
11.1	Introduction	181
11.1.1	Co-design Methods	182
11.1.2	Problem Definition: System Design Optimization	183
11.1.3	Outline and Contribution of the Chapter	184
11.2	Control Design Optimization: Gear Shift Strategies with Comfort Constraints for Hybrid Vehicles	186
11.2.1	Bi-level Optimization: Control Problem	188
11.2.2	Simulation Result: Bi-level Propulsion System and Control Design	192
11.3	Control and Propulsion System Design Optimization: Topology, Transmission, Size and Control Optimization for Hybrid Vehicles	193
11.3.1	Simulation Result: Bi-level Propulsion System and Control Design	195
11.4	Conclusions	196
	References	197

	Simona Onori	
12.1	Introduction	199
12.2	Optimization Problems in HEVs	200
12.3	Case Study: Pre-transmission Parallel Hybrid	201
12.4	Problem Formulation	202
12.4.1	Optimal Energy Management Problem in HEVs	203
12.5	Finite-Time Horizon Energy Management Strategies	205
12.6	Motivation for Infinite-Time Horizon Optimization	207
12.7	From Finite-Time to Infinite-Time Horizon Optimal Control Problem	208
12.7.1	System Dynamics Reformulation	209
12.8	Infinite-Time Nonlinear Optimal Control Strategy (NL-OCS)	210
12.9	Strategies Comparison: Simulation Results	214
12.10	Conclusions	216
	References	217
13	Optimal Energy Management of Automotive Battery Systems Including Thermal Dynamics and Aging	219
	Antonio Sciarretta, Domenico di Domenico, Philippe Pognant-Gros and Gianluca Zito	
13.1	Introduction	219
13.2	Case Study and Motivation	221
13.3	Optimal Control Problem Formulation	222
13.3.1	Powertrain Modeling	223
13.3.2	Battery Modeling	225
13.3.3	Battery Aging Modeling	226
13.4	Optimal Control Problem Solution	228
13.4.1	Dynamic Programming	228
13.4.2	PMP	229
13.5	Optimal Control Problem Results	230
13.5.1	Dynamic Programming Results	230
13.5.2	PMP Results	234
13.6	Conclusions	235
	References	236
14	Optimal Control of Diesel Engines with Waste Heat Recovery System	237
	Frank Willems, M. C. F. Donkers and Frank Kupper	
14.1	Introduction	238
14.2	System Description	238
14.2.1	Simulation Model	239
14.2.2	Control Model	241

14.3	Control Strategy	242
14.3.1	An Optimal Control Approach to IPC	243
14.3.2	Optimal IPC Strategy	243
14.3.3	Real-Time IPC Strategy	244
14.3.4	Baseline Strategy	245
14.4	Control Design	246
14.4.1	Optimal IPC Strategy	246
14.4.2	Real-Time IPC Strategy	247
14.5	Simulation Results	247
14.5.1	Overall Powertrain Results	248
14.5.2	Cold Cycle Results	249
14.6	Conclusions and Future Work	252
	References	253

Part IV Optimization of the Engine Operation

15	Learning Based Approaches to Engine Mapping and Calibration Optimization	257
	Dimitar Filev, Yan Wang and Ilya Kolmanovsky	
15.1	Introduction	257
15.2	Mathematical Problem Formulation	259
15.3	Jacobian Learning Based Optimization Algorithm	260
15.4	Case Study 1: Application to Engine Mapping	263
15.5	Case Study 2: On-board Fuel Consumption Optimization in Series HEV	265
15.6	Predictor-Corrector Algorithm	266
15.7	Case Study 2 (Cont'd): On-board Fuel Consumption Optimization in Series HEV	269
15.8	Concluding Remarks	269
	References	271
16	Online Design of Experiments in the Relevant Output Range.	273
	Nico Didcock, Andreas Rainer and Stefan Jakubek	
16.1	Introduction	274
16.2	State of the Art Development Approach	274
16.3	Mathematical Background of the COR Design	277
16.3.1	A Local Model Architecture	279
16.3.2	State of the Art Designs	280
16.3.3	Online Procedures	280
16.4	Design Strategies	281
16.4.1	A Distance Criterion in the Product Space	281
16.4.2	The Custom Output Region (COR)	282
16.4.3	The iDoE Strategy	282

16.5	Improved Development Approach using the COR Design	283
16.6	Further Improvement	285
16.7	Conclusion.	288
