

Contents

1	General Introduction: About the Contents and Form of this Book	1
	References	4
2	A Glimpse at the Eighteenth Century: From John Bernoulli to Lagrange	7
2.1	John Bernoulli and the Principle of Virtual Work.	7
2.2	“Bernoulli’s Theorem” by Daniel Bernoulli	9
2.3	D’Alembert and the Metaphysical Notion of Force.	10
2.4	The Notion of Internal Pressure and the Fundamental Equations of Hydrodynamics	13
2.5	Linear Momentum and Moment of Momentum: Newtonian Versus Variational Formulations.	16
2.6	Calculus of Variations and Analytical Mechanics: Lagrange	17
2.7	The Age of Reason: Conclusion and Things to Come.	20
	Appendix A.	22
	Appendix B.	25
	Appendix C.	26
	References	31
3	What Happened on September 30, 1822, and What Were its Implications for the Future of Continuum Mechanics?	33
3.1	Introduction	33
3.2	Preliminary Remarks.	34
3.3	The Main Contents of Cauchy’s 1822/1828 Memoir.	35
3.4	Cauchy’s Stress and Hyperstresses	39
3.5	Stress as a Secondary Notion	40
3.6	Stress as Part of Stress-Energy-Momentum	42
3.7	The <i>Nec Plus Ultra</i> : The Eshelby Stress and the Pseudo Tensor of Energy-Momentum	45

3.8	Conclusion.	48
	Appendix A.	49
	Appendix B.	50
	References	52
4	Piola and Kirchhoff: On Changes of Configurations.	55
4.1	Introduction	55
4.2	Piola's Contribution	56
4.2.1	Some Words of Caution	56
4.2.2	The Strategy of Piola	57
4.2.3	Introduction of the "Piola Format" by Piola	57
4.2.4	Stresses as Lagrange Multipliers.	61
4.3	The Role of Kirchhoff.	65
4.4	Conclusion.	66
	References	66
5	Duhamel's Pioneering Work in Thermo-elasticity and Its Legacy	69
5.1	The Roots of Duhamel's Contribution.	69
5.2	Basic Ideas of Duhamel's 1837 Paper.	70
5.3	Duhamel's Strategy and Equations of "Thermo-elasticity" . . .	70
5.4	Comments and Further Developments.	72
5.5	Conclusion.	74
	References	74
6	From Cauchy to Boussinesq via Barré de Saint-Venant	77
6.1	Introduction	77
6.2	Cauchy and Lamé.	78
6.3	Barré de Saint-Venant.	79
6.3.1	On his Name	79
6.3.2	Some Biographical Elements	80
6.3.3	Saint-Venant's Scientific Achievements	81
6.4	Boussinesq: A Disciple of Saint-Venant	90
6.4.1	Contributions to Fluid Mechanics.	90
6.4.2	Contributions to the Mechanics of Deformable Solids	91
6.5	Conclusion.	93
	References	94
7	Helmholtz Interpreted and Applied by Duhem	99
7.1	Hermann von Helmholtz and Pierre Duhem.	99
7.2	Free Energy ("Freie Energie").	101

7.3	Helmholtz-Duhem Electrodynamics	104
7.4	Stability.	107
7.5	Conclusions	108
	References	110
8	About the Cosserats' Book of 1909	113
8.1	Preliminaries	113
8.2	The Main Contents of the Cosserats' Book	116
8.3	Reception and Influence of the Cosserats' Book.	120
8.4	Concluding Remarks.	123
	Appendix A.	124
	References	133
9	Caratheodory: Thermodynamics and Topology	137
9.1	Introduction	137
9.2	On Caratheodory	139
9.3	The Standard Formulation	139
9.4	Caratheodory's Work	141
9.5	Reception of Caratheodory's Axiomatics.	144
9.6	Toward Irreversible Thermodynamics	145
	References	146
10	On Duhem's Energetics or General Thermodynamics	149
10.1	Introduction	149
10.2	On Duhem's Style and General View of Science	151
10.3	Some of Duhem's Creative Works in Thermo-mechanics	153
	10.3.1 Physical Chemistry	153
	10.3.2 Fluid Mechanics, Viscous Fluids	154
	10.3.3 Deformable Solids	155
	10.3.4 General "Thermo-mechanics" and Thermodynamic Potentials.	156
	10.3.5 Contributions to Mathematics.	157
10.4	Short Analysis of Some Exemplary Writings	158
	10.4.1 On the General Treatise on Energetics	158
	10.4.2 On the Evolution of Mechanics	159
	10.4.3 On Permanent Alterations and Hysteresis	162
10.5	Influence on Contemporaries and Later on	168
10.6	Conclusion.	172
	Appendix A.	172
	Appendix B.	176
	References	183

11 A Course of Continuum Mechanics at the Dawn of the Twentieth Century (Volume III of Appell's Treatise on Rational Mechanics)	187
11.1 Prolegomena: On Paul Appell	187
11.2 Setting the Stage	188
11.3 The Contents of Appell's Volume on the Mechanics of Continua	190
11.3.1 Some Words of Introduction	190
11.3.2 Vector Analysis and Potential Theory	191
11.3.3 Equilibrium and Internal Motion of a Continuous Mass	191
11.3.4 Hydrostatics and Stability	192
11.3.5 Deformation of Continua	192
11.3.6 Kinematics of Continua	193
11.3.7 General Theorems of the Dynamics of Perfect Fluids	194
11.3.8 Theory of Vortices	194
11.3.9 Parallel Flows	195
11.3.10 Barocline Fluids	196
11.3.11 Elements of Elasticity Theory	197
11.3.12 On Viscous Fluids	198
11.4 The Cosserats' Theory of Euclidean Action	199
11.5 Concluding Comments	199
Appendix: Biography of Paul Appell	201
References	202
 12 A Successful Attempt at a Synthetic View of Continuum Mechanics on the Eve of WWI: Hellinger's Article in the German Encyclopaedia of Mathematics	205
12.1 Introduction	205
12.2 The Scientific Environment	207
12.3 The Contents of Hellinger's Article	208
12.3.1 Introductory Remark	208
12.3.2 The Layout and Articulation of the Contribution	208
12.4 The Identified Fields of Marked Interest of Hellinger	209
12.4.1 On General Principles of Mechanics and General Equations	209
12.4.2 On Variational Formulations	210
12.4.3 On Finite Strains and Elasticity	212
12.4.4 On Oriented Media	213
12.4.5 On One-Dimensional and Two-Dimensional Bodies	213

12.4.6	On Thermodynamics and Dissipative Behaviours	214
12.4.7	On Newly Studied Behaviours	215
12.4.8	On Relativistic Continuum Mechanics.	216
12.5	Conclusion.	217
	Appendix A.	218
	References	245
13	Epilogue.	249
13.1	On the Method.	249
13.2	The Main General Themes and Breakthroughs.	251
13.3	The Breakthroughs of Second Rank	253
13.4	The Timid Steps in Coupled Fields.	253
	References	254
	Retrospective: A Gallery of Portraits of the Main Actors	257

Continuum Mechanics Through the Eighteenth and
Nineteenth Centuries
Historical Perspectives from John Bernoulli (1727) to
Ernst Hellinger (1914)
Maugin, G.A.
2014, XI, 269 p. 27 illus., 5 illus. in color., Hardcover
ISBN: 978-3-319-05373-8
