|          |   |           |
|----------|---|-----------|
| <b>1</b> | <b>High-Order Asymptotic-Preserving Methods<br/>for Nonlinear Relaxation from Hyperbolic Systems<br/>to Convection-Diffusion Equations.....</b> | <b>1</b>  |
|          | Sebastiano Boscarino and Giovanni Russo   |           |
| 1.1      | Introduction.....   | 1         |
| 1.2      | Implicit-Explicit (IMEX) Runge-Kutta (R-K) Schemes .....  | 4         |
| 1.3      | Computation of the Limit Solution .....   | 5         |
| 1.4      | Penalization Technique.....   | 8         |
| 1.5      | Numerical Test .....  | 9         |
|          | References.....   | 12        |
| <b>2</b> | <b>A Hybrid Finite Difference-WENO Scheme for Large<br/>Eddy Simulation of Compressible Flows.....</b>  | <b>15</b> |
|          | Anne Burbeau-Augoula  |           |
| 2.1      | Introduction.....   | 16        |
| 2.2      | The Finite-Difference Scheme for Smooth Solutions .....   | 17        |
| 2.2.1    | On the Problem of Numerical Instability .....   | 17        |
| 2.2.2    | The Skew-Symmetric Form for the Convective Terms ...  | 18        |
| 2.2.3    | The Finite-Difference Approximation<br>of the Skew-Symmetric Form .....   | 19        |
| 2.3      | The WENO Scheme for Shock Waves .....   | 23        |
| 2.4      | The Hybrid Approach .....   | 25        |
| 2.4.1    | A Shock Detecting Sensor .....  | 26        |
| 2.4.2    | The Hybrid Flux .....   | 26        |
| 2.4.3    | The Multidimensional Case .....   | 27        |
| 2.5      | Numerical Results .....   | 28        |
| 2.5.1    | The Taylor-Green Vortex Flow.....   | 28        |
| 2.5.2    | The Shu-Osher Test Case .....   | 30        |
| 2.5.3    | Compressible Isotropic Turbulence.....  | 32        |
| 2.6      | Concluding Remarks .....  | 34        |
|          | References.....   | 35        |

|          |  |           |
|----------|--|-----------|
| <b>3</b> | <b>Finite Volume Formulation of a Third-Order Residual-Based Compact Scheme for Unsteady Flow Computations</b> | <b>37</b> |
|          | Karim Grimich, Bertrand Michel, Paola Cinnella, and Alain Lerat  |           |
| 3.1      | Introduction   | 37        |
| 3.2      | Finite Volume Framework  | 38        |
| 3.3      | Finite Volume RBC Schemes  | 40        |
| 3.4      | Direct FV Extension of RBC Schemes   | 41        |
| 3.4.1    | Approximation of the Main Residual   | 41        |
| 3.4.2    | Residual-Based Dissipation Operator  | 42        |
| 3.5      | Finite Volume Third-Order RBC Scheme   | 43        |
| 3.5.1    | Approximation of the Main Residual   | 43        |
| 3.5.2    | Approximation of the Mid-point Residuals   | 46        |
| 3.6      | Stability Properties of RBC $i$  | 48        |
| 3.6.1    | Dissipation Properties of RBC $i$  | 49        |
| 3.6.2    | Cauchy Stability of RBC $i$  | 50        |
| 3.7      | Numerical Applications   | 52        |
| 3.7.1    | Advection of an Inviscid Vortex  | 52        |
| 3.7.2    | Laminar Flow Past a Cylinder   | 55        |
| 3.7.3    | VKI LS-59 Turbine Cascade  | 56        |
| 3.8      | Conclusions  | 57        |
|          | References   | 58        |
| <b>4</b> | <b>Parallel Implementation of <math>k</math>-Exact Finite Volume Reconstruction on Unstructured Grids</b>      | <b>59</b> |
|          | Florian Haider, Pierre Brenner, Bernard Courbet, and Jean-Pierre Croisille                                     |           |
